Not only was there a sharp decline in the ratios of first-year commissions to first year's premiums in 1907-8, but the Armstrong investigation of 1905, and the events which immediately preceded it, also caused a pronounced decline in the amount of first year's premiums and consequently in the amount of first-year commissions. From 1899 to 1904, inclusive, there had been a steady increase in the aggregates of both premiums and commissions, to wit, from \$26,883,161 and \$14,876,923 in 1899 to \$38,676,367 and \$20,311,067, respectively, in 1904. In 1905 there was a drop of nearly \$6,000,000 in new premiums, and nearly \$2,000,000 in commissions, in 1906 there was a further decline of more than \$7,000,000 in the aggregate of the six companies' first-year commissions, and again in 1907 there was another slump of more than \$3,500,000 in the aggregate of commissions paid on new business. It was not until 1908 that the aggregate of first-year commissions began to make an upward move, and in the four years from 1904 to 1908 the aggregate of premiums on new business had shrunk from \$38,676,367 to \$17,963,803, and the commissions from \$20,311,067 to \$7,811,662. Surely it would require an exceptional optimist to figure out any particular encouragement for life insurance agents in this outcome of the New York reform crusade!

But this does not take into account the business of companies, other than those doing business in New York, or the earnings of their agents.

CONNECTICUT GENERAL INCREASES CAPITAL.

The stockholders of the Connecticut General Life Insurance Company, of Hartford, approved at a meeting held on the 3d inst., the proposal of the board of directors to increase its capital stock from \$150,000 to \$300,000, the additional stock to be offered to existing stockholders, pro rata, at par.

President Huntington gives out the following brief statement concerning the matter:

The capital stock of the company was fixed originally at not less than \$500,000, the charter allowing an increase of \$1,000,000. It was reduced twice in accordance with permission from the legislature, and it is now proposed to increase it. The company is growing very fast, and the directors thought it best to have a larger capital stock.

DEATHS OF MRS. McCURDY AND MRS. HOMANS.

Since last week's "Chronicle" went to press, the venerable Richard A. McCurdy, formerly president of the Mutual Life Insurance Company, has suffered the loss of his estimable wife, who had been his companion for over fifty-two years. Mrs. McCurdy's death took place at the family home at Morristown, N. J. She had not been in good health for some time, and, indeed, never fully recovered from the shock of the misfortunes which came upon the family.

During the same week Mrs. Sarah Louisa Homans, widow of the late Shephard Homans, passed away at the home of her son, Shephard Homans, Jr., at Englewood, N. J. Her distinguished husband was also at one time connected with the Mutual Life Insurance Company, as its actuary, and was later the founder and president of the Provident Savings Life Assurance Society, as well as the most famous consulting actuary of his time.

THE FIDELITY-PHENIX FIRE INSURANCE COMPANY OF NEW YORK.

The Fidelity-Phenix Fire Insurance Company has decided to handle its Southern business from the home office in New York.

The Southern department, which was maintained for many years at Atlanta, Ga., by the Phenix before its merger with the Fidelity, and was then known as the Southeastern department, is to be given up on June 1.

J. E. Lopez, second vice-president, has returned from a tour of inspection through the Southern territory, as a result of which it has been decided that the business of this territory shall be managed from New York. The change is made because of a belief in the policy of centraliza-

tion by those who have the affairs of the merged companies in charge.

Major Charles F. Hard, who has been manager of the Southern department since last December, will devote his time after June 1 to his own insurance interests in the South.

A PECULIAR CONTEST.

Insurance Commissioner Lasater, of Oklahoma, has compelled the Old Line Bankers Life Insurance Company, of Lincoln, Neb., to resort to the Supreme Court for a mandamus to compel him to issue a license, which he refuses on the ground that the company reserves on a 4 per cent. basis, whereas the Oklahoma law requires that all policies issued on or before January 1, 1910, shall be valued on a 3½ per cent. basis.

The company is willing to submit to that valuation by the Oklahoma department, but refuses to change its own basis; that is, it is willing to have the Oklahoma department so value its policies, but is not willing to value them in that manner itself, and so report their value to the department of Nebraska.

TEXTS FOR SEVERAL SERMONS.

New York State Superintendent of Insurance Hotchkiss sends "The Chronicle" his advance preliminary report of the operations of the 188 fire and marine insurance companies for 1909. Commenting thereon he says:

It would appear that the year just passed proved a favorable one to the companies and shows that they are again building up their reserve funds against the time when they may be called upon to meet and pay losses of perhaps as great magnitude as those of the California conflagration of 1906. While the fire waste for the year 1909 was not as large as that of the previous year, it is still enormous, being in great measure due to faulty construction of buildings, inadequate water supplies, carelessness and criminality. Proper building requirements, especially in the smaller cities of the country, strictly enforced, would without question prove an important factor in reducing the excessive destruction of property by fire, which is estimated for 1909 at about \$200,000,000.

The National Convention of Insurance Commissioners at their convention held at Colorado Springs in August, 1909, adopted an underwriting and investment exhibit which was used in this report.

The total result of the companies' underwriting and investment returns shows that the 188 fire, fire-marine and marine insurance companies reporting to this department for the year 1909 made an underwriting gain of \$22,589,899. The gain from investments of these companies was \$26,728,228, total \$49,318,127, from which must be deducted a loss in surplus of \$21,912,817, on account of dividends paid, changes in special reserves and balance of remittances to and from home offices of foreign fire and marine companies of other countries, making the total net gain in surplus for the year \$27,405,310.

The fire companies write in the State of New York during 1909 \$5,378,756,810 of insurance, an increase of about \$460,000,000 over the previous year. The excess of fire premiums received over fire losses incurred and estimated expenses on New York State business for the year was \$8,625,491 and is classified as follows:

New York State companies. \$2,869,612
Companies of other States. 3,194,968
Foreign companies—United

States branches 2,560,911

The marine and inland risks written in this State during 1909 by fire and fire marine companies show an increase of nearly \$60,000,000 over those of 1908.

Licensed Agents.

The following is a list of the names and business addresses of the agents to whom licenses have been issued by the superintendent pursuant to the provision of section 137 of the insur-

ance law, for the calendar year 1910:

New York City.

Edouard T. Mostert, 29-31 Liberty street.

William W. Henshaw, 67-69 William street.

Seelye Benedict, 35-37 Nassau street.

Edward E. Hall, 45-49 Cedar street.

Frederick L. Green, 80-82 William street.

Alexander Robb, 100 William street.

Emil H. Frank, 47 William street.

Arthur C. D. Foster, 45 William street.

Warren M. Kimball, 100 William street.

Wallace Reid, 56 Maiden Lane.

Brereton Platt, 63 William street.

Henry W. Lowe, 49 Wall street.

Charles E. Ring, 43 Cedar street.

Charles A. Seddon, 95 William street.

Henry T. Alley, 45 William street.

Edward Meinel, 84 William street.

Lawrence R. Bowden, 111 William street.

Buffalo.

Charles G. Worthington, 15-17 Chamber of Commerce.

Charles M. Clark, 16 West Seneca street.

The section of the insurance law referred to above relates to the surplus line agents, and the number and names of them is an excellent indication of the land office business they are doing with outside companies and Lloyds concerns, and the need of and the opportunity for increasing home facilities.

The limited ability of the home companies to swing large lines has opened up the way for so-called Lloyds piratical and rate-cutting institutions to work all sorts of flim-flam games and wild-cat schemes to the detriment and discredit of legitimate fire underwriting. The door opened by section 137 on the fire question has been a quasi-license for these same concerns to invade every other field of insurance enterprise and the casualty and insurance companies have been especially feeling this newer encroachment during the last few years. Emboldened by the apathy of the insurance companies them-

selves as well as by the State Department, these so-called syndicates have issued combination contracts—politely and conveniently termed "policies"—covering fire, casualty, burglary, fidelity, surety, liability and—as in the auto races last summer—even life risks, all in the same motion. It would seem logical to at least confine these concerns to the same limits set up for home companies.

From the gratifying manner in which Superintendent Hotchkiss has measured up to duty and has assumed personal command and directed the insurance laws applications, the hope may be indulged that he will promptly take hold of the subject of the evils existing and purify the noxious breeding spots of the pests.

"SAFEGUARDS."

The splendid work which the companies engaged in employers' liability insurance are doing in the matter of encouraging the prevention of accidents has never been better exemplified than by the publication "Safeguards for the Prevention of Industrial Accidents," which has just been published by the accident and liability department of the Aetna Life Insurance Company of Hartford, Conn., and is now being circulated at the low price of 50 cents per copy. This valuable document is edited by David Van Schaack, whose skill in relation to this important subject is well known in employers' liability circles.

The following is a portion of the preface making clear the purposes of the company in publishing this work:

This book of suggestions regarding safeguards for the prevention of accidents is necessarily incomplete. The diversification of industrial operations is so great that to treat the subject fully would require a separate book for at least each group of allied industries.

At the same time it is the hope of the publishers of this book that the suggestions contained herein will be of some aid in the work of accident prevention. For the most part these suggestions are general in nature, and many of them are applicable to a large number of industries.

In connection with the illustrations of safety devices we desire to say that we do not wish to appear as advertising any particular device. There are a great many devices which are just as practical as those we describe or illustrate, but of course it is impossible for us to include them all in this book.

In addition to a general discussion of the perils of machinery the book contains many illustrations of unguarded machinery, showing the perils thereof, and of guarded machinery, showing how those perils may be obviated. It closes with special hints to employers of labor, giving various forms of notices, advices as to information concerning accidents required and the like.

The following is a copy of the "Don'ts" with which "Hints to Employers of Labor" lead off:

Don't neglect to inform yourself as to your legal duty to your servants. Make yourself familiar with the local labor and factory laws regarding the employment of children, the guarding of elevators, shafting and machinery, etc., and see that your foremen are observing same.

Don't neglect to furnish all employes, all the time, with the safest and best ways, works, machinery and appliances with which to do their work. Equip your machinery with all

the standard safety contrivances whether required by law or not.

Don't neglect to furnish proper and frequent inspections and keep all ways, works, machinery and appliances in repair.

Don't neglect to employ experienced and careful managers, superintendents and foremen. Such employes, for whose acts you are held responsible, should be engaged only upon written application indicating their qualifications, previous experience and general fitness to direct your operations.

Don't neglect to furnish a sufficient number of careful and competent employes to safely perform any operation assigned to them.

Don't neglect having all employes carefully instructed in a language they understand as to the proper and comparatively safe way to perform their duties.

Don't neglect to establish reasonable and safe rules and regulations regarding the operation of your business.

Don't neglect to insist upon a strict observance of the rules and regulations prescribed, the transgression of which should be severely penalized.

Don't neglect to have all employes on being hired, or immediately afterwards, expressly admit in writing in the presence of witnesses, a knowledge and appreciation of the ordinary, obvious and necessary hazards of the occupation they are to engage in.

Don't neglect to warn all employes by word of mouth and by printed notices against the dangers which are not apparent except to the experienced and intelligent man, and instruct them how such dangers may be avoided.

John W. Wheeler.

John W. Wheeler, president of the Boston Mutual Life Insurance Company, and for nearly two decades at the head of that organization, died at his home in Orange, Mass., Tuesday afternoon, after a brief illness. He was born in Orange, November 20, 1832, and was one of the leading citizens of the Commonwealth. Prominent among his many activities was the financial management of the New Home Sewing Machine Company, of which he was president and treasurer. He served in the Massachusetts Legislature, was a member of the councils of former Governors Douglas and Guild, and was a delegate to three Republican National conventions. The funeral is to take place to-day.

The Exchange.

At last Saturday's meeting of the New England Insurance Exchange the recommendation of the executive committee that the following note be promulgated in the agents' manual in connection with permit for unprotected dwellings and stables, was adopted: "The form of vacancy and non-occupancy permit prescribed under class D for protective dwellings

and private stables may be used on policies covering unprotected dwellings and private stables in place of the above permit." It was also voted to insert the following note after the note relating to hotels in the term policy rule, as found on page 70 of the Blue Book: "Average rates promulgated for policies covering on entire schedule of property owned by municipalities shall be marked 'A.'" The adoption of the "sidewalk clause" recommended by the executive committee was indefinitely postponed, and the proposed classification of dwelling houses, as to constructive materials, was referred back to the committee for further consideration.

New England Brevities.

The Standard Fire Insurance Company of Hartford, Conn., recently organized with a full paid capital and surplus aggregating \$1,000,000, has made the following agency appointments: W. A. Sanborn, Hartford; George R. Burton & Sons, New Haven; Elmer A. Lord & Co., Boston; J. G. Hilliard, New York; J. W. De Moth, Brooklyn; Hare & Chase, Philadelphia; Parr & Parr, Baltimore; H. R. Bowenstein Co., Washington; Gurney & Overturf, Buffalo; Justus Mulert, Pittsburg; Robert O'Gorman & Co., Newark.

The Phoenix Preferred Accident Insurance Company of Detroit was admitted last week to do a personal accident and health insurance business in Massachusetts, where it is represented by Albion Pease, of Boston.

Albert Henderson, for ten years identified with the Old Colony Trust Company, has been appointed assistant treasurer of the New England Casualty Company of Boston by President Corwin McDowell.

The sympathy of many friends goes out to Thomas L. O'Brien, of O'Brien & Russell, Boston, in the loss of his son Harry, who died suddenly of heart failure Wednesday night of last week.

Russell & Fairfield, of Boston, have relinquished the agency of the Eastern Fire of New Jersey.

The Fidelity-Phenix has appointed Lester B. Howard special agent for Maine, New Hampshire and Vermont. Mr. Howard was formerly identified with the field work of the Granite State Fire.

A license to do business in Maine has been granted the American Drug-gists Fire of Cincinnati.

RIGHT MAN IN THE RIGHT PLACE.

The election of Walter H. Sage, Western manager of the German American, as chairman of the governing committee of the Western Union, is a merited recognition of splendid service. Mr. Sage has been one of the hardest workers on the committee, and has acquired a vast amount of influence because he was everlastingly "on the job." It is only about six years ago that Mr. Sage was promoted from the field to the assistant managership of his company, with prospects that he would for a long time be overshadowed by Judge Eugene Cary, one of the most brilliant managers and influential members of the Western Union.

The sudden death of Judge Cary in a few months was followed by Mr. Sage's promotion to the managership and his becoming the representative of the company in the union. He was a young member and naturally in the background for a time, but when work was assigned to him he did it and soon he was recognized as a member who would deliver the goods. Now he finds himself in what is perhaps the most influential position a fire underwriter can occupy in the country, for the governing committee comes pretty near being the union about 355 days in the year, and an important factor the remaining ten days.

N. F. P. A.

The National Fire Prevention Association has furnished "The Chronicle" with the program of its fourteenth annual convention, to be held in Chicago a week from next Monday, and which promises to be the most important in its history. The business will begin on the day following, as per this schedule:

Tuesday.

President's address.
Report of the executive committee.
Report of the editor of the quarterly.

Manufacturing Risks and Special Hazards—Committee report. W. D. Grier, chairman.

Devices and Materials—Committee report. W. C. Robinson, chairman.

Automatic Sprinklers—Committee report. E. P. Boone, chairman.

Fire Protection Coverings for Window and Door Openings—Committee report, W. C. Robinson, chairman.

Hose—Committee report. H. W. Forster, chairman.

Hydrants and Valves—Committee report. H. O. Lacount, chairman.

Pumps—Committee report. E. V. French, chairman.

Private Fire Supplies from Public Mains—Committee report. E. V. French, chairman.

Standard Hose Couplings and Hy-

drant Fittings for Public Fire Service—Committee report. F. M. Griswold, chairman.

The Fire Underwriters Uniformity Association meets Tuesday evening, May 17.

Wednesday.

Signaling Systems—Committee report. Ralph Sweetland, chairman.

Cold Storage Warehouses—Committee report. E. P. Boone, chairman.

Automobile Garages—Committee report. F. E. Cabot, chairman.

Conference on Building Code—Committee report. E. T. Cairns, chairman.

Fireproof Construction—Including Concrete and Reinforced Concrete—Committee report. E. T. Cairns, chairman.

Afternoon—Visit to Underwriters Laboratories.

Thursday.

Theater Construction and Equipment—Committee report. C. A. Hexamer, chairman.

Pneumatic Conveyors of Stock and Refuse—Committee report. H. L. Phillips, chairman.

High Pressure Fire Service Systems—Committee report. A. G. Patton, chairman.

Address: "The Architect and Fire Protection." Irving K. Pond, president, American Institute of Architects.

Address: "Fire Insurance vs. Preventive Measures in Building." F. S. Baker, president, Royal Architectural Institute of Canada.

"American Water Works Association Convention—Report of delegate. F. M. Griswold.

International Association of Fire Engineers' Convention—Report of delegates.

American Warehousemen's Association Convention—Report of delegates.

SPRINKLER LEAKAGE INSURANCE.

The advent of the Hartford Fire into the sprinkler leakage field has caused considerable comment and some commotion since it happened a few months ago. That it is active is evidenced by the number of complaints from some sections that it is cutting rates. These reports do not appear to annoy its management, as they do not confess to being promoters of bad practices in making such rates as they see fit on business on which there is no recognized tariff. What is troubling some of the Hartford's competitors more than its rates is its policy forms, which one prominent casualty man has admitted are the best on the market. The Hartford policy does not contain the exemption of liability in case of loss resulting from tornadoes, a strong feature.

The Frankfort Marine Accident and Plate Glass Insurance Company has appointed Daniel J. Walsh's Sons, of Philadelphia, general agents for all lines for Philadelphia and vicinity.

"NEEDS MUST WHEN THE 'DEVIL DRIVES.'"

Men connected with Western loss departments will be very glad when vacation times arrives if conditions continue as they have been for the past few weeks. How much the weather has had to do with losses is, of course, problematical. March was unusually advanced and dry and the number of losses resulting from sparks from railroad engines was attributed in part to the dry grass and the winds. In some parts of the West there were also several conflagrations in small towns and villages. April was a month of cold weather and storms, bringing back winter conditions after a spell of spring.

There is considerable complaint of suspicious losses also. It is thought that some merchants and business men have discounted the return of prosperity too heavily, and have found themselves overstocked and crowded for money and—.

Forced Into Good Luck.

In several of the bad fires which have occurred of late the Fidelity-Phenix has been fortunate in having no liability, thanks to the advice given last December by the Policyholders Union of Chicago. The Phenix was strongly criticised at that time by the Policyholders Union and suffered a number of cancellations. And now the laugh is going around and the philosophers are repeating the old saw about its being an ill wind that blows no good.

200 Fifth Ave. New York,

Poor Deluded Sinners.

Vice is a monster of such hideous mien
That to be hated needs but to be seen;
But seen too often, familiar with his face,
We first pity, next endure, and then embrace.

When the good gray poet wrote these lines long ago he was unconsciously affording a fit motto for a heading for the bonds issued to the so-called Raines law hotels of the State of New York. It should be kept ever before those who sign such bonds as sureties. The principals are already one leg in Hell and irredeemable, but there is evidence abundant that innocent sureties—corporate and individual—are being constantly deluded and seduced into involuntary partnership in the disastrous business alliance—for them—and without reference to the moral questions, which "The Chronicle" has left to other forces to combat. Only the disastrous and discreditable influence which the signing of excise liquor bonds has on the financial credit of surety companies engaging in the maniacal rush for premiums have actuated it. The result is apparent in the present condition of two or three companies which have been kissed by Iscariot.

These have been victims of youth and credulity, combined in about equal measure with inexperience, and the worship of mammon and the fleshpots of Egypt.

These dive-keepers—hotel-keepers they are licensed as—were badly stung in a recent deal by which some 340 of them acquired shares of stock in a "liberal and improved" up-to-date surety company, directed by the finest talent in America and intending to set all other companies an example of how to do it, according to announcement. As a result the company has practically gone to the rubbish heap. There are more to follow, not yet, but soon, unless there is a radical reversal of the practices of the immediate past. *Verbum sat sapienti.*

Give the Devil His Dues.

It is but fair to extend a measure of pity and sympathy to the deluded saloon owners. Handicapped on one side by birth and breeding in an atmosphere of such foulness that they may never reasonably hope to escape its environment and by the necessity of earning a living, and, on the other side, by the wolves and hyenas of politics—Tammany Hall—all of the same type of gutter and back alley type of breeding and who make the saloon legitimate prey, the dive-keeper is

sure of the devil in the end and has no hope of happiness now. For this reason he presents a pathetic figure. And for none the less reason that he is a favorite subject for the reformers in the legislature and the amateur philanthropists out of it, but represented there, all seeking to legislate him into such civic form and virtue as their limited vision and experience deems sufficient. The business of reforming is like the practice of surgery and medicine and theology—the way to success must be over a road lined with many mistakes and much intelligent labor. And they are astonished that the act of the legislature of the great State of New York has no terrors, either for the workers of evil or their lawyers. Pity the sinner present and pray for his hereafter—if you can pray with faith. Don't waste valuable time if you can't. And it would be well to include in your prayer that even worse than this miserable victim of a system—the one who preys on him and keeps him shackled to his hopeless life.

A Freak Measure.

As an instance of the many legislative measures directed toward the uplift of the saloonkeeper is a bill which has already passed the Assembly and is now up to the Senate which proposes an amendment to the excise laws, which provides:

The applicant may file in lieu of either of the other sureties herein provided a certificate of deposit for an amount equal to the penalty of said bond plus \$200. Said certificate to have been issued by an institution authorized by the State Comptroller as a depositor of State funds. Such certificates shall be drawn to the order of the applicant and be indorsed by him to the State Commissioner of Excise and the said sum so deposited as shown by said certificate shall at all times be applicable in payment of any judgment recovered by the State Commissioner of Excise upon said bond. If after the satisfaction of said judgment, there shall remain any surplus out of said deposit, the said surplus shall be at once returned by the State Excise Commissioner to said applicant.

Should the surety given upon such bond be that of a certificate of deposit as above provided, demand may be made eighteen months or more after the expiration of the license for which said bond was given, by the principal of said bond or his assignee of said certificate of deposit, for the surrender by the State Excise Commissioner of said certificate of deposit. Said certificate shall be surrendered within ninety days after such demand, unless an action for the recovery of the penalties provided for in said bond shall have been begun.

It is said that the bill has the ap-

proval of Excise Commissioner Clement and that Gov. Hughes will sign it if passed. There is something about the bill, as it reads, that puzzles the onlooker of the excise game and suggests looking for the joker and other latent possibilities for the ubiquitous grafter to exercise his nimble and alert accomplishments in the thinking line.

The "Morning Telegraph," a paper published in New York and devoted to prizefighting, racing, the saloon elements, police station reports and doings, and those things of evidently salacious satisfaction to its reading circle, has seized the opportunity to attack the surety companies because of cruelty to the saloonkeepers in charging them for bonds, and then proceeds to apply to them titles and names most familiar in the Tenderloin world of its circulation. There is something about this attack, evidently directed at two or three of the eighteen surety companies, which avoids any discrimination, that is so asinine as to let at once both laughable and pitiable. For instance, it says:

The possibilities for graft under the present conditions are entirely removed by the amended law and in the nature of things the business of the excise bonding companies must become insignificant.

Instead of having to pay a bonding company all the way from \$40 to \$1,800 (\$1,800 being the face value of the bond itself) for writing an excise bond the saloonkeeper may file with the State Commissioner of Excise a certificate of deposit for \$2,000 and the State writes the bond for nothing.

That is a pretty fair specimen of the qualification of this red and yellow journal to publish anything but garbage can news, or opinions. Here is a choice bit of humor:

So long as the saloonkeeper or hotel proprietor continues to preserve the respectability and good order of his place, his money is in the bank drawing interest and cannot be forfeited without legal process.

The splendid work of the Committee of Fourteen, organized for the suppression of immoral places, dives, white slave marts, etc., all allied with and essential to the liquor dealers of the class referred to, is unintentionally recognized in the following:

The introduction of the new bill was followed soon afterward by the resignation of Frederick H. Whitin as secretary of the Committee of Fourteen and his acceptance of the office of deputy superintendent of elections under William O'Leary.

This amendment is the first concession of the great liquor interests of the State since the State excise law went into effect, and New York ceased to consider the protection of those en-

gaged in the traffic. According to those who approve the amendment, it has nothing to do with the liquor traffic as such and will not affect the sale of liquor in any way. It merely relates to a method of bonding and will put out of business the grasping corporations that have charged anything they pleased for the writing of a bond, after consulting the classified black list handed around by the secretary of the Committee of Fourteen.

The same Secretary Whitin has won the respect and confidence of the high-minded Committee of Fourteen, of the surety companies and of the insurance press. Incidentally, he has won the black hand taboo of the criminal liquor elements. To him more than any single individual is due the branding of the thieves in the crusade the Fourteen has fearlessly engineered and the waking up of the legitimate insurance, business and social interests of the city—as well as the State—to the cancerous condition of this member of the body politic. All credit to him for the enemies he has made. Hear one of them, "The Telegraph":

Until young Mr. Whitin bobbed up from beneath the troubled waves of excise as secretary of the Committee of Fourteen, the usual method of securing an excise bond—and this must be obtained before a license can be issued—was to apply to some bonding company, which, after a careful investigation of the client's references and for a nominal fee, would assume the risk on his honesty and integrity.

Such companies give bond for cashiers in offices, treasurers of various concerns and collectors for business houses. The excise bonding business did not begin to assume the pretensions of a gigantic "trust" until Mr. Whitin, secretary of the Committee of Fourteen, began to make out a blacklist of saloons and Raines law hotels that did not come up to his fastidious notions. This he circulated among the bonding companies and they used it as an authoritative rating. The fact that one place might be a little or much worse in moral character than another place made no difference whatever except in the matter of the price charged for the writing of the bond.

The worst place on the blacklist could go right on doing business provided the proprietor would condescend to pay \$500, \$800 or \$1,800 for the writing of a bond for \$1,800.

The bonding companies soon realized that they could cut down expenses very largely by discharging all their clerks and investigators and just relying upon the services of Mr. Whitin.

Now, the saloonkeepers did not know Whitin at first, but they were bound to respect the names of the eminent clergymen, lawyers, financiers and college professors whom he represented in the Committee of Fourteen. But not one of the Committee of Fourteen had any knowledge at first hand of the conditions that prevailed among the "dumps," as the secretary used to call them. Everything in the matter of investigating

and rating saloons, Raines' law hotels and cafes was left in the hands of Whitin. He became virtually the supreme arbiter of the situation.

Now comes another of those naive bits of higher critical wisdom regarding the situation, as uttered by this same hereinbefore referred to deluded advocate and champion of the violators of the excise laws:

There is no provision for the acceptance of cash bonds by the Department of Excise and no provision for the handling of cash in that department. Real estate bonds are acceptable only when the property is absolutely unencumbered, and there are few saloonkeepers who can come forward with a surety owning that kind of real estate.

This is the joker in the bill, which, it is safe to say, is affording only amusement to those who are familiar with the excise bonding proposition:

The new law, if passed by the legislature, will give any man the right to open a saloon providing he can furnish the cash collateral in the amount of \$2,000. All the liquor dealers consider the new amendment the most fair and fortunate that has come their way in a long time.

In other words, if the saloon man is on the list of applicants for bond who have been violating the law and propose to continue doing so—as they all do—and he cannot get a bond from any surety company, all he has to do is to deposit \$2,000 in cash for an \$1,800 bond and the State will go on the bond itself. (What that \$200 extra is for raises a question but of that later.) Then if the law has not been violated during the year of the bond's currency, the man, in a year and a half later may draw down his deposit of \$2,000 (if he has quit business); if he has continued in business, an unlikely presumption, he has, by the time his first \$2,000 is withdrawable, made three deposits, or \$6,000, with the Excise Department, a pretty snug sum for the average dive keeper of to-day to hazard on so perilous an

undertaking as is his. But his money is drawing interest! Just mark the saloonkeeper or Raines law hotel-keeper that proposes to "tie up" \$6,000 in treasure at 2 per cent. interest in some State department, where it is a theory that thieves cannot break through and steal, when he can use it to open another dive or back another den and make—in extra-hazard-

KANSAS STATE RATING.

Reports from a number of Kansas towns where the agents have been interviewed as to the workings of the State rate regulation law show some interesting developments. As a rule the agents seem very well satisfied with the principle of the law and but little fault is found with its application. Like agents everywhere else, some of those in Kansas see no need for the reduction ordered in preferred rates when nobody was complaining about the old rates. The question of whether rates on the preferred classes bear any reasonable relation to those on other classes does not receive much consideration from the average agent.

The agents who were doing business in a decent way, or endeavoring to do so, welcome a respite from the attacks of their cut-rate competitors. Some of the rate-cutters, however, are disgusted with the new law. Being deprived of their one weapon of warfare they see themselves unable to meet legitimate competition and some of them are quitting the business. Many of the brightest agents are now studying schedules and fire protection as never before. They see that under present conditions the agent who can legitimate reduction for improvement get the assured the lowest rate by stands the best chance to get the business. On the whole, the law, whatever its faults, both in theory and administration, seems to have brought order out of chaos in Kansas and its effect on the agents has been good.

NEW YORK EMPLOYERS LIABILITY BILLS.

Yesterday the General Assembly of New York passed the first bill resulting from its recent investigation of the employers liability insurance, or indemnity conditions, through the work of the commission appointed at its last session and known as the Wainwright-Phillips Employers Liability Commission, in accordance with recommendations made by Governor Hughes.

The bill amends the present employers liability law in many respects. It modifies the so-called "fellow-servant rule" so as to make an employer liable to an employee for injury sustained through the negligence or ignorance of a fellow-employee, and abrogates the "risk rule" by placing on the defendant in any action for damages resulting from injury sustained in the course of employment the burden of proof as to contributory negligence.

The bill also establishes a permis-

sive compensation plan for injuries sustained, under which employers or workmen may enter upon a contract waiving all rights under the employers liability act, in return for benefits according to a fixed schedule of compensation proportioned to the injury sustained and the earning capacity of an employee, regardless of negligence on the part of the injured as a contributory factor in the accident.

FIDELITY INSURANCE IN GREAT BRITAIN.

"The Finance Chronicle" of London thinks that the following ten formal questions addressed to the referees of every person who applies for fidelity insurance in Great Britain, are most extraordinary and offensive:

1. (a) How long have you known Mr.....?
- (b) Are you, or have you been, on intimate terms with him?
2. (a) Are you related to, or connected with, him in any way?
- (b) If so, state in what degree.
3. What has been his business or employment during the time you have known him?
4. Have you any reason to believe that any office has declined to grant or renew an insurance for his fidelity?
5. (a) Has he to your knowledge any private property or income?
- (b) If, so, state roughly your estimate thereof.
6. Is it known to you that he has borrowed money, or is security for any person?
7. (a) Has he at any time been in pecuniary difficulties? If so, when and what was the cause?
- (b) Does he in your opinion live within his means?
8. Have you any reason to believe that he has ever been suspected of or charged with dishonorable or improper conduct?
9. (a) Do you believe that he is of good moral character and integrity and of sober habits?
- (b) Is he addicted to betting or gambling?
10. Is he a person you would yourself trust or recommend your own personal friends to trust with the custody of money?

In addition to this, there is the question relative to the other persons named as referees which "The Finance Chronicle" thinks "will strike a referee on reading, with awe and respect, the form sent him to fill up" as "a direct personal insult to himself."

This question is:

Do you consider the company can place reliance on their replies to questions concerning the character and circumstances of the applicant?

AN INTERNATIONAL ROAST.

The London edition for April, 1910, of the "only international journal in the world," by which modest title "The Insurance Index," of London, makes itself known, contains a five-page roast of the Car and General Assurance Corporation, commencing with the highly original statement:

Some companies are born great: some achieve greatness: and some have greatness thrust upon them. So one old word goes, but if notoriety were exchanged for greatness, the Car and General Assurance Corporation might fill this bill to the far end.

The same sort of bombast is to be found throughout the article and renders it impracticable to determine whether any of the criticisms are meritorious. The article reminds one of similar tirades in the worst period of the history of American insurance journalism.

April saw thirteen children killed and sixteen seriously hurt in the streets of New York. To get the playgrounds idea fully developed is costing high on the books that no municipal board can audit.

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.
Large surrender values.
Dividends at the end of each policy year.
Thirty-one days of grace in payment of all premiums after the first year.
Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.
Loans for the full cash surrender value.

Policy payable in one sum or in instalments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

WHAT IS THE STATUS?

"What is the legal status of the obligations of a surety company when it has been signing bonds in a foreign State for several years, and its license is revoked or cancelled by the said State?" This question is presented to "The Chronicle," and is printed here in order to get it before the insurance forum for discussion.

The particular incident which gives rise to the inquiry is that of the United Surety Company, of Maryland, which has executed a large number of bonds in the past few years in the States of Massachusetts, Wisconsin and New York in about every form of suretyship, from guardians, administrators and trustees of estates, liquor licenses, guarantee of notes in bank, collateral for loans, in fact for anything that happened along that promised a premium. Now these States have, through their insurance departments, deported the company by refusing to renew its license.

The query then comes as to the effect of this action on the liability of the company and the duty of the State with reference to the bonds of its own courts and to "the people" which have been signed by the exiled surety. The prudent answer received so far is that it is a far more involved question than appears on the surface. "Of course the courts have discretionary power to demand new sureties," says one, "but this power seems lacking in some of the departments, the contingency apparently never having been anticipated. In addition, it may be said, the demand may be made, but cannot be enforced. The court cannot compel one's signatures to a surety bond. But, that is not the vital point. What protection is afforded in the very large matter of court cases and to the State itself, in, say excise bond cases, when the company has been involuntarily, so to speak, bundled out, neck and crop, and could that not be constructed into a sufficient defence against liability?"

The query is interesting, even if merely academic, but corporate suretyship has acquired a code of decisions so limited and variegated that it really affords slight assistance toward anything like uniformity of practice or judgment.

It will be recalled by the surety people that the Federal authorities in Washington recently made a ruling to the effect that no surety company was authorized to be accepted as surety on any Government bond in a State

where it had not been regularly admitted and licensed by the insurance department of such State. This instantly attracted the attention of the companies to the fact that hundreds of thousands of bonds they had issued, in all the years past at their New York, Washington or home offices, regardless of the location of performance, were thus made null and void, and a quiet smile went around for a few days, finally reaching Attorney General Wickersham, who promptly chloroformed the ruling, substituting one reading "in future."

THE UNITED SURETY.

Monday's press dispatches state that on Sunday Superintendent Hotchkiss refused to renew the license of the United Surety Company, following similar action by Massachusetts and Wisconsin. It is readily supposable that all the States will follow suit.

This Sunday action followed very quickly after "The Chronicle's" issue of the preceding Thursday, pointing out the damaging and dangerous alliance of the company with the criminal liquor trade of this city, and with special reference to the change of political administration which does not promise protection, an asset of office which its predecessors did not overlook.

The result was instant. Superintendent Hotchkiss obtained information that all his public hearings, inquiries, examinations, etc., had not acquired, and the decision to act quick evidently interfered with his pious Sunday meditations.

At this writing it is rumored that the United will continue in business under new control and management, a consummation devoutly to be wished for. Its brief history has been margined with about every kind of misfortune that the mean elements in human nature could inject into it.

Freed from ignorant and stupid advisors there is no reason why the company should not quickly regain its footing and go on to a creditable career.

THE WEST COMING EAST.

President Fred B. Lloyd, of the Pacific Surety, put in a few lively days in Chicago last week. He was on his way to Boston and other Eastern points. Before reaching Chicago he visited the insurance commissioners of Minnesota and Wisconsin and explained to them just what had been going on in the company for the past few months. It will be recalled that Commissioner Beedle of Wisconsin held up renewal of the company's license for a short time owing to the wierd tales of stock selling and high finance which proceeded from the Pacific Coast.

Mr. Lloyd had had his representative, A. William Randall, in Chicago for several days before his arrival, looking over the ground for available general agency or managerial timber. Mr. Lloyd was able in a short time to meet a number of men that Mr. Randall had interviewed, but he did not make any appointment at this visit.

The Pacific Surety has had an unsatisfactory experience in Illinois. Some years ago it entered the State for plate glass business and had a heavy loss ratio. Then it transferred to Conkling, Price & Webb as general agents of its plate glass department. They have made some money for it every year, but its earlier losses have not yet been overcome. Three or four years ago the man who had handled Conkling, Price & Webb's plate glass business went to the Pennsylvania Casualty and took a good part of the business with him at rates which resulted in that company doing a lot of cancelling last year. The small business remaining with Conkling, Price & Webb was scarcely worth the trouble of handling it, so they have resigned the general agency to take effect within a few weeks.

The Pacific Surety has had a surety general agency with Stuart Patterson, a broker, but its premiums have amounted to only a couple of thousand dollars a year.

Will Build on Big Plans.

Mr. Lloyd proposes to make the Pacific Surety a big company. In a short time it will authorize another increase in its capital, this time to \$1,000,000. While the additional stock may not be sold at once there will be no unnecessary delay in its sale as Mr. Lloyd is determined that it shall be a company which can carry a good net liability on bonds.

The unfavorable publicity given the recent affairs of the company does not appear to trouble him. He says that much of what has been done will be regarded in a different way when the insurance public knows more about

it, and how much had to be done as it was done because of exigencies over which he had no control, but which he had to meet. To say the least, a company which six months ago was hardly known outside of the Pacific Coast region, has been brought prominently to the attention of the insurance public.

That the Pacific Surety will henceforth be managed with energy is not to be doubted by anybody who gets into Mr. Lloyd's presence, even for a short time.

GETTING TOGETHER ON CLAIMS.

The International Claim Association will hold its first annual convention at Atlantic City, N. J., in June, and it promises to be the most successful meeting ever held of representatives of the claim departments of the principal companies writing health and accident insurance.

It will be remembered that for several years past, the International Association of Accident Underwriters has had under consideration a plan contemplating a better understanding and more general co-operation of the claim departments of the fifty odd companies represented in that organization.

Last fall in New York a representative meeting was held and the work of organization begun. Since that time the executive committee, composed of Dr. W. L. Gahagan, medical director of the United States Casualty Company; P. B. Eyler, chief adjuster of the Aetna; F. H. Canty, general counsel at Chicago of the London Guarantee and Accident; Harry H. Vaux, manager of the personal accident claim department, General Accident Assurance Corporation, Philadelphia; Dr. Colris M. Taylor, supreme surgeon of the Order of United Commercial Travelers of America, and L. E. Brown, superintendent of claim department, Continental Casualty Company, have been working out the details for the first meeting.

The committee on program has obtained from many of the leading representatives a series of papers, discussing the perplexing problems with which the adjuster is daily confronted and suggesting means of coping with them. It is expected that very interesting discussions will follow the reading of these papers. The subjects to be discussed are limited to those arising under accident and health contracts.

Between thirty-five and forty companies, embracing all the leading health and accident insurance concerns operating in this country will

be represented at Atlantic City. Any company belonging to the International Association of Accident Underwriters is eligible for membership in this organization.

The Federal Life Insurance Company has appointed Charles S. Rannells, of Jacksonville, Ill., agency superintendent. Mr. Rannells was formerly chairman of the Republican State Central Committee of Illinois, and during Governor Tanner's administration was chairman of the State Board of Railroad and Warehouse Commissioners. Mr. Rannells is a popular and forceful man of wide acquaintanceship and the Federal is to be congratulated upon securing his services.

WHY NOT?

In view of the experience of the ten years just past, approximate figures of which have been compiled for private reference, it would appear that the time is at hand for the National and State banking laws to make amendments requiring every man, woman and child on the pay roll of a bank to be bonded. At present the law, as a general thing, applies only to cashiers. And for directors to ask the president to give a bond or the president to ask the directors for one, would have resulted immediately in a severance of business relations. But things have changed. The startling number of bank presidents now doing time in both State and Federal prisons, combined with the equally startling number that have committed suicide and those who are now either awaiting trial or have escaped on some pull or technicality, affords ample ground for stockholders and depositors demanding of their institutions adequate indemnity against high official malfeasance or misfeasance. The same argument applies to directors. They should also be bonded in face of the fact that every delinquent president here referred to could not have dishonored himself and ruined the bank or banks over which he exercised control if the directors had been on their job, to use forceful vernacular.

If the amendment suggested could be procured it would result in a tremendous increase in safety to business, protection of bank stockholders and depositors, and an almost entire wiping out of defalcations. It would relieve the possible vestige of personal feeling in the banking circles to have it made statutory for every employe to be bonded. Then the old cry that always ascends from some members of a bank's staff that they handle no money and, therefore, should not be forced, under a hardship, will settle itself and for keeps.

In addition to the experience of the companies writing bank fidelity insurance for the past ten years, as mentioned, their experience in general for double that period is equally interesting. It shows that from the janitor all the way up the line to the president substantial losses have occurred. A janitor found on the floor of the bank a package of \$25,000 which had been dropped by the cashier in returning the counter cash to the vault after closing for the day. Only a few weeks ago a messenger boy "lost" \$110,000 in bonds on the street in New York. A runner was held up and robbed on one of the busiest streets. He is now doing time because the

company that issued the burglary policy against messenger hold-ups got busy. Then some bank officials claim that a bookkeeper cannot steal, a most fallacious idea. One of the biggest steals in the history of banking recently occurred in the financial district of this city, done by a trusted bookkeeper, the opportunity for which arose by reason of his being trusted and in the same manner that directors have trusted the delinquent presidents and cashiers of melancholy memory.

Nothing has ever contributed so much to the elevation of the standard of integrity and business and social character of the banking world inhabitants as has the corporate fidelity bond and the depository surety bond. One has marked out a line of conduct for the individual; the other for the institution. Any extension of the operation of these forces therefore are foreordained to betterment of conditions.

National Banks.

The total number of National banks organized under the National Banking Act since it was first in effect is 9,742, of which 2,619 have discontinued business, leaving in existence 7,123 banks with authorized capital of \$992,997,635, and circulation outstanding secured by bonds \$683,254,858.

The figures of State banks and trust companies are not at hand, but on a rough guess they will probably aggregate double or treble the above volume.

This gives an inkling of the vastness of the field afforded for surety energy and development as suggested herein. It also suggests the query as to why it has been so long neglected and left to grow of its own natural inclination. The surety companies have not, generally speaking, been alert to their opportunities, largely because of inexperienced officials whose brains were not worn in their heads.

CONTINENTAL CASUALTY WINS.

"In an action on a policy that stipulated that if the life of the insured was lost from fighting, rioting, or from injury intentionally inflicted upon the insured by himself or another person, the limit of the company's liability shall be one-tenth the amount which would otherwise be payable under the policy," the evidence showed that insured's death was caused by fighting. Held, that such showing precluded a recovery for any greater sum than the one-tenth named in the policy."—Continental Casualty Company vs. Fleming, Ky. C. A.

This is a decision of interest, not only because it comes from Kentucky, where gentlemen indulge in little personal target practice at times, but never stoop to vulgar fighting, but it is also of note because it indicates a higher judicial purview in interpreting the conditions in a contract of insurance.

POOR DELUDED SINNERS.

(Continued from Page 11.)

ous and expensive joints—1,000 per cent., or ten times that.

Another bit of humor:

The certificate of deposit transferred to the Commissioner of Excise in lieu of a bond does tie up \$2,000 temporarily, but it is taken for granted that the saloonkeeper is in business to make money and to save money. And if he makes money he keeps it in a bank any way and lets it draw interest.

"Temporarily," as used, is two and a half years. But it is time to drop the curtain on this dance of the Devil for the present. The sordid and ignorant elements of humanity must always necessarily be in conflict with the intelligent self interests of such elements. The surety companies, with two or three much chastened and saddened exceptions, have not taken any serious interest in the excise problem in New York for several years past. In the earlier days of the excise law when the "Black Horse Cavalry" of the capitol at Albany were in the saddle the Platt company made a great deal of money out of the excise game because it had protection; later the whirligig of politics went round and the Tammany Hall element got control of the game for a year or two, but being persona non grata at Albany soon dropped it. Then came a New York youngster which simply scalded itself almost to death. Since then it has been an open game and the only profit from it has accrued in

the salaries paid by the Excise Department to its constantly and rapidly increasing pay-rollers, amounting last year to something like \$380,000, all from surety company bond forfeitures.

Hence, the companies so ably served by "young Mr. Whitin" are utterly indifferent to what Albany may do excise-way. They now have a line on the dives, are in thorough accord as to the moral hazard of the excise risks, and are working on intelligent lines. The one or two minor outside companies are of little consequence at this writing, and will probably never get "chesty" again, even if they survive the summer.

For the sake of preserving and increasing the market value of their stocks, getting adequate rates, bring desirable citizens, and turning their backs resolutely on any partnership with vice and law-breaking and destroying elements, "The Chronicle" repeats its oft-made suggestion:

Agree to write no Raines hotel licenses or "Whitin" danger points excise business for two years and things will adjust themselves automatically, if you hang together.

The youngsters coming into the bonding field may well be ignored. Their surplus is in no single instance sufficient to pull them through the game, and if they are reckless and heedless it is best to let them go by the board as soon as possible—the sooner the better.

It is a pretty safe conclusion that if the companies would "stand pat" for a year or so, preserve the organization and write as at present, excluding every liquor selling place that violates the law with or without police or other protection, there would be an excise shake-up that would make Mayor Gaynor's present reform campaign against violations look like a canceled stamp.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.

Curtate Summations of D Column.

Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:

Divide temporary insurance values by immediate temporary annuities.

Computing Annual Endowment Insurance Premiums:

Divide endowment insurance values by immediate temporary annuities.

Computing Annual Pure Endowment Premiums:

Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.

By these means, the net extra premium for a special guaranty can be quickly and accurately computed.

Computing Annual Semi or Double Endowment Premiums:

Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.

Computing Limited Premiums:

Divide the proper single premiums by immediate temporary annuity.

Computing Surrender Values:

Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.

Extended Insurance with Fractional Paid-up Endowment:

Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.

Computing Terminal Reserves:

Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.

Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.

Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.

Warranted Commissions for New Business.

Surrender Values.

Dividends.

For these purposes the "select and ultimate" will be most useful.

The New Canadian Insurance Act.

Important Features of the New Law, Enacted at Ottawa.

On the 4th inst., the government or administration bill to regulate insurance in the Dominion of Canada, which has been pending since 1907 and has been often amended, since its introduction on the recommendation of the Royal Commission, became a law. Until almost the last moment, before it passed, the rumor was abroad that it would not be advanced until the right of the Dominion Parliament to regulate insurance, recently decided adversely by a Quebec Judge, should be passed upon by the highest court. But apparently the opinion prevailed that a test could be made as well on the new act as on the old.

In the main the act looks like a rather well-drawn statute of a State of the United States. It is enormously more nearly similar to an American model than to the British act. Indeed, it much resembles the insurance statutes of an ultra-conservative American Commonwealth, such, for instance, as Massachusetts.

Minimum Standard of Life Insurance Reserves.

In it, however, Canada takes issue, sharply, with Massachusetts, as to a minimum standard of valuation of life insurance policies. Under the old law, the Dominion had been the staunchest supporter of the Massachusetts shibboleth, "net level premium reserves." Under the new law, by common consent the following becomes the minimum standard for Canada:

Such valuation shall, as to policies issued on or after the first day of January, one thousand nine hundred, and bonus additions or profits declared in respect thereof, be based

on the British Offices Life Tables, 1893, OM (5), and on a rate of interest of three and one-half per cent. per annum; and as to policies issued prior to the said date, and bonus additions or profits declared in respect thereof, such valuation shall, until the first day of January, one thousand nine hundred and fifteen, be based on the said mortality table, and a rate of interest of four per cent. per annum; and on and after the first day of January, one thousand nine hundred and fifteen, be based on the same mortality table, and a rate of interest of three and one-half per cent. per annum.

It shall be allowable for any Canadian company, in preparing its statement of liabilities, to deduct from the value of its policies, as ascertained in accordance with sub-section 2 of this section, an amount ascertainable in the manner following, namely: in the case of any policy, the net annual premium upon which is not less than the corresponding net annual premium for a whole life insurance with uniform premiums throughout life, the difference between the said whole life premium and the corresponding net premium for a one-year term insurance shall constitute the amount to be deducted as aforesaid in respect of such policy at the date of its issue; such difference, however, to be diminished each year by an equal proportion, so that upon the payment of the fifth annual premium, the value of the policy shall be the value as ascertained in accordance with sub-section 2 of this section.

Every such company, whether it avails itself or not of the provisions of this subsection, shall set forth in its annual statement hereinbefore referred to, the value of its policies as ascertained in accordance with sub-section 2 hereof, the amount allowable by this subsection as a deduction therefrom, and such other information in respect thereto as the superintendent may deem necessary.

An Approximate Select and Ultimate Method.

The method here set forth is the approximation of "select and ulti-

mate," put forward by the Canadian Life Officers' Association and recommended by the Royal Commission. Though similar in form to the approximate "select and ultimate" methods already introduced in France, Denmark and Sweden, it differs in this important particular: It gives no more relief than the business of the previous five years, actually in force at the time of valuation warrants while the European variety permits a certain amount to be offset as "cost of new business," the aggregate to be made good in five equal annual instalments. Heavy lapses have exposed the weakness of this in Denmark and doubtless will do so elsewhere. The Canadian method is much like that adopted in New Jersey.

Limitation of Expenses Eliminated.

Both the limitation of expenses, first year and renewal, and the publicity provisions, measuring the expenses against certain standards, disappeared from the bill before it passed. So far as is discoverable no step is taken toward reform as regards extravagant cost of new business, though the need for such is generally recognized and conditions are worse in that respect than at any time in New York.

The provision, however, that all companies must report what would be the deduction to bring their reserves to the minimum standard, stands. Companies reporting to the New York Department have been sorely complaining about being required to make such a double report. The provision will scarcely avail much to afford a standard for measuring cost of new business unless the department should require the deductions to be separate-

is computed and furnished for each year's business and not merely bunched for five years' business.

Several Royal Commission Specialties Retained.

Though many of the somewhat stringent provisions recommended by the Royal Commission and constituting an aftermath, as it were, of the Armstrong legislation, have been eliminated, others, that were not regarded so objectionable by the companies, are still to be found, as follows:

Annual returns to include movements of securities.

Limitation of maximum reserves to 3 per cent. basis (except that if premiums on a basis of less than $3\frac{1}{2}$ per cent., then $\frac{1}{2}$ per cent. less than rate so employed).

The minimum reserve standard, already mentioned (except that the OM⁽⁵⁾ table is substituted for the HM).

And the following:

No life insurance company licensed under this act, nor any person, firm or corporation on its behalf, shall, in respect of its Canadian business, pay or allow to any agent, broker or other person, firm or corporation for procuring an application for life insurance, for collecting any premium thereon or for any other service performed in connection therewith, any compensation other than that which has been determined in advance.

No such life insurance company, and no person, firm or corporation on its behalf, shall make any loan or advance without adequate security, to any person, firm or corporation soliciting or undertaking to solicit applications for insurance; nevertheless advances may be made to any such person, firm or corporation for travelling expenses or against commissions or other compensation to be earned in respect of premiums, but such advances shall not be allowed as assets in the superintendent's annual report prepared for the Minister.

No salary, compensation or emolument shall be paid to any director of a Canadian life insurance company for his services as such director unless authorized by a vote of the members in the case of a mutual company, and by a vote of the shareholders and other members, if any, in the case of a company having capital stock. No salary, compensation or emolument shall be paid to any officer or trustee of any such company unless authorized by a vote of the directors, nor shall any salary, compensation or emolument amounting in any year to more than five thousand dollars be paid to any agent or employee unless the contract (if made after the passing of this act) under which such amount becomes payable has been approved by the board of directors.

No Canadian life insurance company shall make any agreement with any of its officers or trustees to pay for any services rendered or to be rendered, any salary, compensation or emolument extending beyond a period

of five years from the date of such agreement.

No Canadian life insurance company shall make any contract with any director, trustee, officer, employee or servant of the company, save such agents as are employed to solicit insurance, to pay any compensation or reward whatever by way of commissions in respect of the business of the company or any portion thereof: Provided, however, that this subsection shall not apply to insurance personally solicited and secured outside of office hours by any employee or servant not being a director, trustee or officer of the company.

No officer, agent, employee or servant of such life insurance company nor any person soliciting insurance, whether an agent of the company or not, shall be deemed to be for any purpose whatever the agent of any person insured in respect of any question arising out of the contract of insurance between such person insured and the company.

After the first day of January, one thousand nine hundred and eleven, no such life insurance company, and no officer, director or agent thereof, shall issue or circulate, or cause or permit to be issued, or circulated in Canada any estimate, illustration or statement of the dividends or shares of surplus expected to be received in respect of any policy issued by it.

No such life insurance company shall make or permit any distinction or discrimination in favor of individuals between the insured of the same class and equal expectation of life in the amount of premiums charged, or in the dividends payable on the policy, nor shall any agent of any such company assume to make any contract of insurance, or agreement as to such contract, whether in respect of the premium to be paid or otherwise, other than as plainly expressed in the policy issued; nor shall any such company or any officer, agent, solicitor or representative thereof pay, allow or give, or offer to pay, allow or give, directly or indirectly, as inducement to insure, any rebate of premium payable on the policy, or any special favor or advantage in the dividends or other benefits to accrue thereon, or any advantage by way of local or advisory directorship where actual service is not bona fide performed, or any paid employment or contract for services of any kind, or any inducement whatever intended to be in the nature of a rebate of premium; nor shall any person knowingly receive as such inducement any such rebate of premium or other special favor, advantage, benefit, consideration or inducement; nor shall any such company or any officer, agent, solicitor or representative thereof give, sell or purchase as such inducement, or in connection with such insurance, any stocks, bonds, or other securities of any insurance company or other corporation, association or partnership.

Except for the bona fide purpose of protecting investments previously made by it, and subject to the approval of the treasury board, no such life insurance company shall, nor shall its directors or officers or any of them on its behalf, under color of an investment of the company's funds, or otherwise, directly or indirectly be em-

ployed, concerned or interested in the formation or promotion of any other company: Provided that nothing in this act shall be deemed to prohibit insurance companies investing their funds in securities of a new company as provided in section 59 of this act.

No such life insurance company shall subscribe to or participate in or employ the funds of the company in any underwriting for the purchase or sale of securities or property of any kind, nor shall any director or officer, except for the bona fide purpose of protecting investments already made by the company, enter into any transaction for such purchase or sale on account of said corporation, jointly with any other person, firm or corporation: Provided, that this section shall not be deemed to prohibit the subscription in manner aforesaid for bonds or securities permitted by this act in a bona fide permanent investment on behalf of any such company.

Provisions for "Class Accounting."

The provisions about surplus distribution are as follows:

Except as provided in section 90 of this act every such life insurance company, anything in its special act or elsewhere to the contrary notwithstanding, shall provide in every participating policy issued or delivered within Canada on or after the first day of January one thousand nine hundred and eleven, that the proportion of the surplus accruing upon such policy shall be ascertained and distributed at intervals not greater than quinquennially.

In the event of a company issuing, on and after the first day of January, one thousand nine hundred and eleven, policies which provide for the distribution of surplus or profits at less frequent intervals than quinquennially, and known as deferred dividend policies, such company shall, with respect to such policies, ascertain and apportion at least once in every five years, reckoning from the date of the policies, to each class thereof, the share in such surplus or profits to which such class is equitably entitled, and the total sum of the shares so ascertained and apportioned shall, like the reserve or reinsurance fund, be and constitute a liability of the company, and shall be charged and carried in its accounts accordingly until it has been actually distributed and paid to the policyholders entitled thereto.

Except in the case of a term or an industrial policy, the share of surplus allotted to any participating policy issued on or after the first day of January, one thousand nine hundred and eleven, shall, at the option of the holder of the policy, be payable in cash, or be applicable to the payment of any premium or premiums, or otherwise if the company grants other options, upon said policy or to purchase of a paid-up addition thereto; and, in the case of a term policy shall, at the holder's option, be payable in cash, or be applicable to the payment of premiums: Provided, however, that the option of the holder of a policy once exercised shall, except with the consent of the company, remain in force during the whole of the existence of the policy.

No such company shall, in all cases,

where the insured has not elected in his application or otherwise in writing in which manner the said dividends shall be applied, mail a written notice to him, at his last known residence, of the amount of the said dividends and the options available as aforesaid; and in case the holder fails to notify the company in writing of his election within three months after the date of the mailing of said notice, the surplus shall be applied by the company in the case of a term or industrial policy in payment of any premium or premiums upon the policy, and in the case of other policies to the purchase of a paid-up addition to the sum insured.

Sections 91 and 92 shall not apply to deferred dividend policies.

From and after the first day of January, one thousand nine hundred and eleven, every such company shall, in respect of all participating policies issued and in force in Canada on the said first day of January, one thousand nine hundred and eleven, which provide for the distribution of surplus or profits at less frequent intervals than quinquennially and known as deferred dividend policies, ascertain and contingently apportion at least once in every five years reckoning from the date of the policies, to each class thereof, the share in such surplus or profits to which such class is contingently entitled. The total sum of the shares so ascertained and contingently apportioned shall be carried into the accounts and shall be kept separate and distinct from the undivided or unapportioned surplus and so shown.

Investment Restrictions.

The following are the restrictions upon the investments of life insurance companies, imposed by the act:

Any life insurance company which derives its corporate powers or any of them, from an act of the Parliament of Canada, or which is within the legislative power of the Parliament of Canada, may invest its funds, or any portion thereof, in the purchase of,—

(a) The debentures, bonds, stocks or other securities of or guaranteed by the Government of the Dominion of Canada or of or guaranteed by the government of any province of Canada; or of or guaranteed by the government of the United Kingdom, or of any colony or dependency thereof; or of or guaranteed by the government of any foreign country, or State forming a portion of such foreign country; or of any municipal or school corporation in Canada, or elsewhere where the company is carrying on business; or guaranteed by any municipal corporation in Canada;

(b) (i) The bonds of any company which bonds are secured by a mortgage or hypothec to trustees or a trust corporation or otherwise, upon real estate or other assets, of such company; or,

(ii) The debentures or other evidences of indebtedness of any company, which has been doing business for a term of not less than three years prior to the date of such investment, provided default shall not have been made by such company in the interest payments upon its debentures or other evidences of indebtedness within the

said period of three years prior to such investment; or,

(iii) The preferred stocks of any company which has paid regular dividends upon such stocks or upon its common stocks for not less than five years preceding the purchase of such preferred stocks, or the stocks of any company which are guaranteed by a company which has paid regular dividends upon its preferred or common stocks for not less than five years preceding the purchase of such guaranteed stocks; or,

(iv) The common stocks of any such company upon which regular dividends of at least four per cent. per annum have been paid for the seven years next preceding the purchase of such stocks: Provided that not more than thirty per cent. of the common stocks and not more than thirty per cent. of the total issue of the stocks of any company shall be purchased by any such life insurance company, and that no company shall be permitted to invest in its own shares or in the shares of another life insurance company; or,

(c) Ground rents mortgages or hypothecs on real estate in Canada, or elsewhere where the company is carrying on its business, provided that the amount paid for any such mortgage or hypothec shall in no case exceed sixty per cent. of the value of the real estate covered thereby; or,

(d) Life or endowment policies of contracts issued by the company or by any other life insurance company licensed to transact business in Canada.

2. Any such life insurance company may lend its funds or any portion thereof on the security of—

(a) Any of the bonds, debentures, stocks or other securities mentioned in the preceding subsection; or

(b) real estate or leaseholds for a term or terms of years or other estate or interest therein in Canada or elsewhere where the company is carrying on business; Provided, however, that no such loan shall exceed sixty per cent. of the value of the real estate or interest therein which forms the security for such loan, but this proviso shall not be deemed to prohibit a company from accepting as part payment for real estate sold by it, a mortgage or hypothec thereon for more than sixty per cent. of the sale price of such real estate.

3. The treasury board may authorize the acceptance by a company of

bonds, stocks or debentures not fulfilling the foregoing requirements of this section, (a) in payment or part payment for securities sold by such company, or (b) obtained under a bona fide arrangement for the reorganization of a company whose securities were previously owned by such company, or for the amalgamation with another company of the company whose securities were so owned.

4. No such life insurance company shall loan any of its funds to any director or officer thereof except on the security of the company's own policies.

5. This section shall take effect on the first day of January, one thousand nine hundred and eleven.

Various Provisions.

The act makes comprehensive provisions for amalgamations and reinsurance, provides that life companies may cover disability to the extent of remitting the requirement of premium payment or, if total and permanent, by paying a sum not exceeding the death benefit, provides the New York rule for valuing industrial whole life or endowment at 80 (or over) policies, provides for the regulation of assessment life insurance, fire insurance and other branches of insurance, provides for participating policyhold-

A NEW INDUSTRIAL COMPANY IN FRANCE.

The "Compagnie Francaise d'Assurances Populaires," that is, the French Industrial Insurance Company, has just been organized with a capital of 4,000,000 francs, or about \$800,000.

There has long been a virtual dearth of industrial insurance in France which is all the more remarkable since it has been popular with the French speaking population of Belgium and the French speaking population of Switzerland, in which latter country indeed one of the French cantons, Neuchâtel, has state industrial insurance, so almost universally patronized has this branch of insurance been there.

In France, the established life insurance companies have not been disposed to add this to their other business. The French life insurance companies are conducted with exemplary economy; and their managers have looked with much disfavor at the necessarily large disbursements for expenses when premiums are collected weekly. One of the companies, "La Phenix," has been doing a small premium business for a franc, or twenty cents, per month; but the premiums have been collected through a large bank at minimum expense. The amount of business, likewise, has not been large.

The new company is expected, it is said, to take up the usual lines of industrial insurance and actively to solicit business. Up to this time but a small volume of industrial insurance has been transacted in France, almost solely by companies of Belgium, Holland and Switzerland.

IN THE CEMETERY.

Chicago, (Special)—The United States Life Endowment Company, of Chicago, got its quietus last Friday, when Mrs. Elizabeth Lumley, of Watseka, Ill., who had a judgment for \$360 against the concern, secured the appointment of a receiver. Mrs. Lumley was beneficiary under a \$5,000 policy, payable in monthly installments, and was unable to obtain satisfaction of the judgment secured when some installments were not paid. The concern has about \$11,000,000 insurance in force and \$200,000 unpaid claims, which is going some for a concern only about five years old.

This was the first of several assessment companies started in Illinois and adjoining States, which proposed, in consideration of the payment of monthly premiums by the assured, to

pay his widow \$100 a month, during her widowhood, and minor heirs a certain sum monthly during their minority, all payments not to exceed \$5,000. The provision for stopping payments to the widow upon her remarriage was cut out several years ago, but the installment plan of paying claims was continued.

Some months ago the insurance department of Illinois sought to have a receiver appointed because the company was insolvent if the present commuted value of these installment claims was charged as a liability as the department demanded that it should be. In this suit the department failed, although the court did give the concern certain instructions about getting its house in order.

More recently the department attacked it again on the score that it was compromising its claims and reporting to the department the payment of larger amounts than actually were paid. Here again the department failed. It was preparing for another attack along different lines, when this receivership intervened. Superintendent Potter and Attorney Ryon of the department have been satisfied for months that the concern was insolvent and rotten, but the Illinois laws governing assessment insurance are so weak that it is very difficult for the department to do anything with such companies. Being unable to wind up by law, the department decided to put it out of business by constant attacks and the publicity that would accompany them, and in this it has largely succeeded, for it was the falling off in premium receipts which did much to make it impossible for the company to meet its losses.

A Political Game.

The United States Life Endowment Company has been a political concern since it started. The first president was former Attorney General James McCartney and the organizer was C. R. Mabry, an examiner in the Illinois insurance department under Yates and Vredenburg. Later the Yates crowd lost control and friends of Governor Deneen got the reins. One of their worst mistakes was in attempting to get the governor to override Superintendent Potter in matters connected with their company.

When the receivership came the directors had called a meeting for next Tuesday to consider a proposal to reinsure in the Western Life Indemnity, which has proved a receptacle for so many assessment concerns in an advanced stage of decomposition. One Eastern company has also been

looking at the remains to see whether there was anything it could take over.

Latest.

It is learned this morning (Monday) that the receivership of the United States Life Endowment was brought about by the officers of the company itself and may, therefore, be regarded as friendly. It puts the company under protection of the court until it can consider the proposition for reinsurance from the Western Life Indemnity and any others that may be offered, and the meeting for this purpose will be held as planned.

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

RESULTS OF AUSTRALIAN AMALGAMATION.

The Mutual Life and Citizens Assurance Company of Sydney, Australia, has just issued its annual report, showing its operations for the year 1909. This report is specially interesting in the United States, because this country represents the consolidation by reinsurance of two Australian companies, resulting in combined assets almost exactly equal to those of the Pittsburgh Life and Trust Company since its absorption of the Washington Life Insurance Company of New York, and also because the amalgamation in Australia was not accomplished without much such a rumpus as attended the reinsurance of the New York company. There is the additional reason, likewise, that the amalgamation of the business and assets of the two Australian companies was effected under a very similar agreement as to "working out" the reinsured business, as was first introduced in the United States in connection with the reinsurance of the Washington Life.

Among other things, the same feature of the limitation of the expense which might be charged against the reinsured business, is notable, the figure being placed in the Australian company at 12½ per cent.

During the year 1909, the combined expense rate of the entire company in its ordinary branch was only 11 per cent., and the expense rate of the reinsured was only 10 per cent.

The report of the managing director says of this: "No office in Australasia conducts its ordinary business at so low an expense rate." This is the more remarkable since the expense rate in the industrial department, 46.9 per cent., is also said to be "the lowest rate at which any office in Australasia conducts its industrial branch."

The company has assets of £4,904,044, or upwards, or \$24,000,000. It is asserted that the actuarial valuation is "on a more stringent basis than that employed in any other Australasia office," the same being "on a strictly pure premium basis," whereas other companies in Australasia are valuing their industrial business on a basis which requires with business to take care of itself.

As a result of the valuation, the actuary recommends that £67,550, or about \$330,000, be apportioned among direct participating policyholders of the combined company and £45,739, or about \$225,000, be distributed among the Mutual Life policyholders who were taken over. It

is asserted by the report of the managing director that "the bonuses paid to policyholders are higher than those paid in any other Australasian life company." They certainly look very good, amounting to 2½ per cent., or \$25 per \$1,000 per annum, added as a reversionary bonus to whole life policies five years in force, and 3 per cent., or \$30 per \$1,000, on policies ten years or more in force. The Mutual Life bonuses are smaller, ranging, however, from \$14 per \$1,000 up to as high as \$20.

Meanwhile the reserves on these policies are being strengthened for the purpose of enabling the company to obtain and maintain the higher rates of bonus.

The several references to "any other Australasian office" has regard especially to the Australian Mutual Provident Society and the New Zealand Government Life Insurance Department; and, in view of the many difficulties which had to be met and overcome, not the least of which was the strong belief in Australia that mutuality necessarily means economy and low cost, it is but natural and excusable that there should be a good deal of rejoicing and even crowing over this unexpectedly favorable result of the year's work. The "Australasian Insurance and Banking Record," however, thinks that there is a deal of perhaps pardonable "buncombe" in the returns; for instance, that the relatively low rate of expenses omits bonuses to shareholders, which brings it up to 16 per cent. for direct policyholders, while the reinsured were charged the full 12½ per cent.; also that the relatively low rate of expenses in the industrial department was due, in part, to "the fact that the company transacts a comparatively small new business," and, in part, to the omission of certain items which would bring the total up to 52.6 per cent.

DECIDES IN FAVOR OF THE FEDERAL.

Judge Windes, of Chicago, has just handed down a decision in the suit brought by the Federal Life Insurance Company to cancel and avoid a "royalty" contract, made at the inception of the company with its organizers. He holds the contract voidable on the broad ground of public policy, the beneficiaries having secured it from themselves in another capacity, i. e., acting as directors of the company.

Concerning the later action of the company in relation to this contract, the court says:

It acted as it should act, fairly and honestly in favor of the real interest of all the stockholders of the corporation, utterly irrespective of whether they were interested in this royalty contract or not.

Royalties up to the time of filing the bill, which is treated as voiding the contract, are allowed by the court in full and final settlement.

MONTHLY OPTIONAL POLICIES POPULAR.

The really marvellous strides in popularity made by the Monthly Optional Tables has, if report speaks truly, created a new situation in industrial business. As is well known, the harvesters did not invariably take kindly to these particular tables, the ground of complaint being that the remuneration for working them was inadequate. Hence, a year ago, considerable pains were taken in these columns to show that, strictly from a business point of view, the tables were a real good thing, embodying the fairest of conditions to assured and assurance worker alike. In short, an attempt, which in the result proved fairly successful, was made to overcome prejudice, which it seemed abundantly clear was based on misunderstanding and a very restricted view of the immense opportunities the new tables afforded for adding to the earnings of the workers. At that time a clear understanding seemed to be the most important thing to endeavor to bring about, and the success which attended this operation is strikingly indicated by the new situation alluded to above. For what is the position at this moment? Certainly not one in which indifference to the merits of the monthly tables is a leading element. Rather does it appear that the weekly—the good old weekly as it is affectionately termed by some of the best men in the business—would seem to be in some danger of neglect, now that the attractions of the monthly have become adequately appreciated.—“Commercial World,” London, Eng., April 1, 1910.

The policy here referred to is that which was described something over a year ago in the columns of “The Chronicle” as having been introduced in the Prudential Assurance Company of London, by J. Burn, assistant actuary, the same being modelled upon the “crown policies,” so-called, issued by the Hafnia Life Insurance Company, of Copenhagen, Denmark, with the alteration suggested to Mr. Burn by Miles M. Dawson, consulting actuary of New York, as follows:

As issued by the Hafnia the policy gave the same amount of insurance without regard to age, for the same monthly premium of one crown, the length of term of payment being shorter if one enters at a young age and increasing according to the age at entry until the highest age at which that premium will suffice to purchase the insurance, is attained.

On the same basis the Hafnia offers policies maturing as endowments at ages 75, 70, 65, 60, etc., the premiums being the same, but the amount of insurance less, though the same without regard to age, the variation still being in the term of payment.

Mr. Dawson's suggestion was that all of these be combined in one policy so that the insured, by paying a little longer on a policy payable

only at death, may have it become an endowment maturing at age 75, a little longer and have it become an endowment maturing at age 70, etc.

The remarkable thing about the success of this policy in London is that it is the first success with insurance on the monthly payment plan, as distinguished from weekly payments. Many attempts have previously been made in Great Britain, in this country and in other countries; and, in all cases where it has been necessary to collect the premiums, they have been uniformly unsuccessful, or attended with a very small measure of success. The success of the Hafnia plan, also, has not been especially gratifying. It appears, however, that, with the additional attractions, it is making its way so well that it is now necessary to make special efforts to keep up the amount of business previously transacted on the weekly plan.

It is not known whether a similar experience has been had by the Metropolitan Life Insurance Company in this country, which company upon the suggestion of Dr. Lee K. Frankel, now its assistant secretary, introduced a similar plan shortly after the Prudential, of London, had brought it forward. The plan, as operated by the Metropolitan, is necessarily upon weekly payments, because industrial insurance has been defined by the departmental rules and certain statutory provisions as weekly payments. The company would have been free to write monthly payments in its ordinary department; but, had it done so, all the business so transacted would have come under the limitation of section 96. In consequence, its policies of this type have been issued on weekly payments, though at a reduced rate of commission. It is known that a large business has been transacted, and that most of the smaller companies throughout the country have felt compelled to adopt similar plans in order to meet the competition.

THE NEW CANADIAN INSURANCE ACT.

(Continued from Page 3.)

ers voting at all elections in life companies, and makes the following conservative but rational provision as to fire insurance reserves:

Rational Fire Insurance Reserves.

For the purposes of the annual statement required to be furnished to the superintendent under this act by any such company transacting fire or inland marine insurance, or both, the liability of the company if a Canadian company in respect of all its out-

standing unmatured policies, or if a company other than a Canadian company in respect of its outstanding unmatured policies in Canada, shall be eighty per cent. of the unearned premiums computed pro rata as at the date of such statement: Provided, however, that for the purposes of section 19 and subsection 2 of section 20 of this act reinsurance value of the outstanding unmatured Canadian policies of a company other than a Canadian company shall be the full unearned premiums computed pro rata as aforesaid.

2. In the case of any such company which transact a nonhazardous three year business on the premium note system or partly on the cash system and partly on the said premium note system, the liability of such company, for the purposes of such statement, in respect of its premium note business shall be eighty per cent. of the unearned portion of the cash received upon and of the balance usually collectable in respect of all outstanding premium notes held by the company computed pro rata as at the date of such statement, and the amount of such premium notes in excess of the amount so usually collectable thereon shall be regarded as a contingent asset only.

Protection for Legal Reserve Members.

The act also affords the following protection to the holders of legal reserve policies in reorganized assessment societies:

The reserves or assets applicable to the policies issued by such company after the date mentioned in the said notice shall not be available in any way for any liability of such company arising out of any policy issued by it on the assessment plan.

The Louisiana bankers will hold their annual convention May 12 and 13 at Alexandria, with headquarters at the Hotel Bentley. Among those who will make addresses is George E. Roberts, president of the Commercial National Bank, of Chicago. His subject will be “A Central Bank of Issuance.” Credit insurance and fire and life insurance as a basis of credit will also be discussed.

MISSOURI TAKING A LOOK.

The declaration of Superintendent Blake, of Missouri, in favor of authority somewhere to determine the equities in disputed cases on rates between the companies and the assured has created some interest in the West. If the German Alliance and its associates should win a sweeping victory in the Federal courts in the case involving the validity of the Kansas rate regulation law, so that it should be made clear that States have no right to regulate rates, the present tendency in that direction would be checked; but with the present uncertainty as to the prerogatives of States and the belief current in many quarters that the States have the necessary power, every official pronouncement is of interest in so far as it gives an indication of the direction legislation may take.

That some sort of rate legislation will be attempted in Missouri at the next legislative session is practically certain. The local agents last year got through both houses a bill giving local boards certain rating powers, and the companies secured the veto of the bill. The local agents are just as strongly in favor of some measure of the sort now as they were last year, and expect to be more successful next time. In view of this sentiment Superintendent Blake's declaration may turn the agents' discontent in a new direction and add Missouri to the States where rates are regulated or reviewed by a power higher than the companies.

Local rate conditions are bad at many points in Missouri, especially at St. Louis and St. Joseph. This fact is not likely to convert to opponents of rate regulations those companies which now look with considerable favor upon it. This division of sentiment among the companies makes the chances for a rate regulation measure better in Missouri than in any of the other States.

WESTERN FIRE LOSSES SERIOUS.

The chief topic of conversation among Western managers at present is losses. The first third of the year was extremely unsatisfactory to many companies. Some will show a profit on the period, but reduced from that of last year, and some state that their companies have made practically nothing in the West so far this year. There do not appear to have been the heavy windstorm losses in the late winter and very early spring that occurred last year, but within a few weeks some heavy ones have come in. Managers seem more inclined to dis-

cuss the suspicious character of the fire losses than any other one phase. One of them, who has had a long experience as a fire underwriter, says that fire insurance is generally a fair index of general business conditions, and that if such is the case now the condition of the fire business shows that the vaunted prosperity of the country is largely a dream. Another expresses the belief that some of the companies that are not well established in the West will be unable to stand present conditions indefinitely, and that there will be a clean-up.

Some of the increase in loss ratio can readily be accounted for in the lowering of the rate level. Superintendent Blake, of Missouri, in his preliminary report, points out that the average rate in that State was reduced 6 cents last year, and this followed a much more marked reduction in 1908. In Wisconsin also the insurance in force has increased and the premiums decreased. Of course, some of this reduction in average rates results from reduction in the hazards, but, especially in Missouri, it comes largely from straight reductions and rate cutting. How long some of the companies that have but small banking profits to help them out can continue to do business in the less profitable Western States is a question for the States that give big profits are growing fewer every year now.

The next hearing of the Illinois fire insurance commission will be held at the Hotel La Salle, next Tuesday.

RETIRES IN GOOD ORDER.

On Tuesday the Cosmopolitan Fire Insurance Company, of this city, capital \$300,000, having reinsured all its risks, and realizing that there was no hope of recouping its losses, petitioned the Supreme Court for an order of dissolution which will no doubt be granted.

It has transacted no business since December 31, 1908.

The petition for dissolution recites that the company has lost money in the last few years and impaired its surplus. The principal shareholders are Jules S. Bache, 100 shares; Leo A. Loeb, 640 shares; Max H. Schultze, 50 shares; estate of Adolf Scheftels, 100 shares, and Charles P. Sanderson, 100 shares.

THE FIRE EXPENSE QUESTION.

George C. Gill and O. B. Ryon, of the Illinois Fire Insurance Commission, were in Chicago last week looking up some of the witnesses who will appear before the commission at its last public hearing which will be held soon. The Policyholders Union of Chicago desires to be heard further, the Association of Commerce and the Illinois Manufacturers Association will also have speakers present. It is also the intention of the commission to hear from a few experts in order to bring out light on certain points which have not yet been illuminated.

The commission is not obliged to have its report ready until next winter, and it is not likely to begin the hard work of its preparation for some little time yet. From the trend the hearings have taken and Attorney Ryon's remarks before the insurance commissioners who are investigating fire insurance expense, there is no reason to expect anything radical in the report of the committee. So far, it has not apparently learned anything on which to base recommendations that the State undertake the control of rates. There is reason to expect, however, that the commission will have something to say on preferred rates and their inequalities in Illinois, which will be unpleasant reading for those who like the present rates on dwellings in Cook county, which are both out of proportion to those in other large cities and also to those in the little Illinois towns outside of Cook county.

Trust Lines and Brokers.

A. W. Neale, of Cleveland, O., chairman of the joint conference committee, proposes to present, among other questions, the one of "Trust Lines and Brokers," which was referred to it by the mid-year conference. According to a newspaper article given out by him Mr. Neale asserts that hundreds of thousands of dollars in premiums are being lost by agency companies and their agents each year to surplus line companies and brokers because of irregular practices.

"In the opinion of many of our profession," he says, "the time has arrived when insurance men should be divided into two camps—the regular agency companies and agents and such brokers as are willing to abide by good practices on one side, and brokerage companies, non-tariff companies and Lloyds and their brokers on the other side. This enormous loss of premiums

is of as much importance to agency companies as it is to their agents. The question before us is, 'What can be done to stem tide and reclaim the business that has been lost to us by unfair means?'"

One suggestion made by the committee is the establishment of an information bureau, with headquarters in New York and Chicago, to furnish agents with information on trust and syndicate lines which are now placed by the brokers through their affiliations. There are many difficulties, however, in the way of making such a bureau self-supporting, and preventing conflicts between the various agents to whom it might furnish information. Another suggestion is that stricter surplus line laws be passed, or that property owners placing business in unauthorized companies be compelled to pay a tax at least equal to the charges of all kinds imposed by the States upon the admitted companies.

THE BUSY EAGLE.

The following item appears in the week's associated daily press news:

Albany, May 9.—The Fire Companies Building Corporation of New York City was incorporated to-day to maintain a general real estate and brokerage agency.

The capital is \$1,500,000, and the directors are: Henry Evans, Charles Altschul, Henry K. Pomroy, Walter P. Bliss and James N. Wallace, all of New York.

There is ground for speculation as to just where and when and how the new realty concern will exercise its activities in the "real estate" and insurance "brokerage" line, assuming that it does not contemplate becoming a Wall Street "broker." On the face it looks nominal and the impression is that it means a model skyscraper insurance office building that will make all the others in this heart of the insurance district perk up and do some spring cleaning.

CENTERING AT CHICAGO.

Chicago, (Special)—The opening of the "Western Department" of the North America at Chicago last week was of more than passing importance. Had the company made this move two or three years ago, it would have signified little more than one more Western department at Chicago, but coming at the same time as the increase in capital and surplus, accompanied by the announcement that practically all lines up to \$10,000 will be doubled, and following the company's advent into the automobile and floater field, the change of headquarters and of managers means that the North America is going to be a much larger factor in the business of the West from this time forward.

This move by the North America leaves the Western department of the Phoenix of Hartford at Cincinnati about the only Western department outside of Chicago. The Philadelphia Underwriters still has its Western department at Erie; the Liverpool & London & Globe has a general agency for a few States at Cincinnati and the Aetna has its Northwestern department at Omaha. It is very likely that all these companies will handle their entire Western business from Chicago after the close of the administration of the present general agents.

PROPOSED FIRE INSURANCE MONOPOLY IN FRANCE.

Two members of the French Parliament have brought forward a proposition for creating a State monopoly of fire insurance in France; and a committee has recently reported upon this matter, with special reference as to whether, if State insurance is established, it shall be on the basis of free competition with the existing fire insurance companies, on the basis of taking over the entire business with indemnifying private companies or on the basis of taking over the business under arrangements which provide for their indemnification.

The principal argument against attempting it on a competing basis is the small business transacted by the state life insurance and annuity department, and by the State department of insurance against industrial accidents. As to both of these, it has been found that the necessity for the applicant taking the initiative and going through a great deal of red tape, the duties of the State employees being very perfunctorily performed, has prevented much of anything being accomplished.

The proposal to take over the business without indemnifying the private companies, while it is supported by many, is repugnant to French notions of justice and fairness. These companies have built up their business by strenuous efforts, and frequently by means of large expenditures; and there is little doubt that their business is very valuable. Of course, the argument is made that its value consists in the privilege to overcharge the insured; but this argument, in view of the narrow margins enjoyed by the companies, seems to have little basis of fact.

It is estimated that about 500,000,000 francs, or in other words, \$100,000,000, would be necessary in order to indemnify the companies and that if this large sum were invested by the State, it would not be possible, even on a compulsory basis and much less on any sort of a voluntary basis, for the State to supply fire insurance at materially lower cost than at present, if it took into account a sinking fund, such as would be necessary to replace this investment.

An extremely important question in connection with it, likewise, is what would become of those who are now acting as agents of these companies. It is estimated that there are more than 200,000 fire insurance agents in France. They are paid, to be sure, for obtaining insurance for their respective companies; but everybody knows that the fire insurance agent

performs most important service over and above the mere solicitation for business. Thus, for instance, he is nearly everywhere relied upon to attend to the renewal, without its being necessary for the insured to watch the same. He usually estimates the values or assists in doing so, at the time the insurance is taken, gives useful advice as to many matters and especially when a loss occurs is of great assistance in getting matters in shape for making claim. Aside, therefore, from the social question as to the other branches of business activity into which these men would be forced, there remains the direct question as to whether, under such a new system, services now actually performed by them would be performed at all, and, if so, whether so well or at so low a cost.

It does not, at the present moment, look as if the scheme would be likely to go into effect in the immediate future.

GREAT DOINGS AT ALBANY.

The hearings on the department's insurance bills at Albany last Tuesday were decidedly lively and eventful.

Fire insurance men were there in force to oppose many features of the proposed amendments affecting them. They were surprised and delighted to have the bill withdrawn by the superintendent, who remarked that the matters would be given further consideration, for legislation, next session.

Representatives of the Associated Fraternities of America made an onslaught upon the bill putting them under the discretionary control of the superintendent, and that bill may also lie over until next year.

The "standard accident policy" bill is on its passage, with an amendment making the superintendent's decision reviewable by the courts.

London Guarantee Writing Credit Insurance in New England.

Boston, May 11, (Special.)—The London Guarantee and Accident was to-day admitted to do a credit insurance business in Massachusetts, after having made an additional deposit of \$200,000 at Albany, in accordance with the requirements of Bay State law for the transaction of such business in the Commonwealth. This has increased the United States deposit of the London Guarantee to \$500,000.

J. R. Hammer is appointed general agent of the London Guarantee's credit branch for Massachusetts, Rhode Island, Connecticut, Maine, New Hampshire and Vermont. Associated with him are H. L. Boardman and W. J. Kershaw, special agents for Boston and vicinity; H. C. Gaines, for Connecticut; C. D. Oliphant, for Maine, and P. M. Taylor, for Rhode Island. Mr. Hammer and his lieutenants are all experienced credit insurance men, and start with flattering prospects for their underwriting specialty in the Northeastern corner of this country.

An Ally for Mr. Kingsley.

It is easily conceivable that Darwin P. Kingsley, president of the New York Life Insurance Company, may find in Curtis Guild, former governor of Massachusetts, a powerful ally in his project of securing Federal control of insurance corporations. Mr. Guild, as recently reported by the Boston "Journal," came out strong for the substitution of Federal regulation in place of the diversified and oftentimes petty harrassments imposed by the "proud man clad with a little brief authority," who holds down a State job. Although the Guild doctrine was not specifically directed toward the healing of underwriting woes—in fact, alludes to about everything else but these—certain of his arguments bear such a strong family resemblance to what has been said by the protagonists of insurance freedom that it may safely be assumed that his sympathies are with them, or would not be appealed to in vain in their behalf. "The Chronicle" will leave to its readers, by reprinting annexed extracts from Mr. Guild's statement, the question of deciding if they do not think so, too:

We are to some extent controlling corporations, but chiefly by all kinds of local legislation whose constantly varying form makes the profitable field of investment of to-day a desert of deficit to-morrow. Fair play and the

protection of the public demand the establishment of a uniform system of corporation control by expert advisors under the supervision of the National Government, applying one law to all States and enforcing the same law from one end of the country to the other.

Need Uniform Law.

Why stop at regulation? Why would it not lend greater stability and uniformity to business if the United States used the common sense of other countries and adopted a single system of incorporation, with a national commissioner, for the sake of convenience, in each State?

Every nation in the world except ours has a single law of incorporation applicable uniformly to every one in the nation. We have half a hundred systems, hampering business for business men as well as sequestering square dealing from the public.

It is absurd that there should be half a hundred ways of incorporating a company in the United States. Is it not ridiculous that it should be possible for a company doing business in one State to evade even the spirit of its laws by taking out a charter in another State? Isn't it wrong that because one single State encourages stock watering and issues corporation charters permitting it that the people of many States, possibly of every State, shall forever be condemned to pay in freight rates and passenger fares, gas rates and electric charges, telephone and telegraph rates, or the retail price of commodities in general use, dividends on capital never invested, rewards for risks never taken?

National law compels a corporation when it fails in business and ends its affairs to liquidate on the same basis in every State in the Union. Logic and common sense alike demand that not only when it goes out of business, but when it goes into business, it should be granted fair play and the same terms of organization, no more, no less, in Maine as in Washington, in Louisiana as in Michigan.

Almost unconsciously the American people are being welded together in a spirit of nationality and union which even the loyal North of Lincoln scarcely knew. * * * * * In war we pull together under a national military law, applying to every one of us, not as citizens of any State, but as Americans. May we not quietly, sanely, but unflinchingly, as common citizens of one nation, work also in peace under a greater measure of national civil law for the more perfect union that results from equality before the same law, equality of opportunity for all, everywhere throughout our entire nation?

Robens' Agents Assemble.

Last Thursday was a gala time for the Connecticut agents of the New England Mutual Life, who assembled at Hartford to celebrate the completion of the first year of the incumbency of Lee C. Robens as the company's general agent for the State. Mr. Robens has made a fine record, both as to production and organization, and the occasion was quite in the order of the fitness of things. The

proceedings began with a luncheon at the Hartford Golf Club, which was followed by interesting and forceful addresses by Dr. Edwin W. Dwight, medical examiner of the company, and Glover S. Hastings, superintendent of agencies. Then came a helpful discussion of subjects of general interest.

Adjournment was then taken to the Hartford Club, where dinner was served in the evening. The after dinner speaking enlisted the able efforts of Vice-President Appel, Assistant Superintendent of Agencies Frank T. Partridge and others. The promise of giving those in attendance good value for every moment of their time was amply fulfilled, and the benefit derived therefrom will doubtless appear in the showing of the Robens general agency for the current year.

The Exchange.

The New England Insurance Exchange last Saturday adopted the following: "For the purpose of determining the minimum rate which shall apply to private dwelling and private barns, it will be considered that where all four walls are of brick, hollow tile, stone or reinforced concrete, the risk shall be classed as "brick"; where any of the walls are wholly or partly frame, cement block or cement plaster, brick veneered or iron clad, the risk shall be classed as "frame." A rule was also adopted allowing permission without charge for the keeping of automobiles owned by a municipality in buildings owned by such municipality, with the standard form of automobile permit. A stamp clerk office was established for New Bedford, Mass., in charge of H. M. Slade, stamp clerk of the New Bedford office.

The Board.

The Boston Board of Fire Underwriters on Tuesday abrogated the rule whereby no return is made to the insured changing his tenancy to a better risk, when the amount of such return is less than one dollar on a policy. J. H. Eddy, Anton Bruns and A. S. Lovett were designated to serve on the rating committee for three months.

Legislative.

Following the report of the Massachusetts Old Age Pension Commission, bills have been reported: to authorize employers and employes to establish co-operative retirement, annuity or pension systems; to authorize cities and towns to establish retirement systems for their employes; to provide for compulsory instruction in thrift in the public schools of the Commonwealth.

Reference to the next General Court

has been reported on the act to establish the Massachusetts Commission on old age insurance and pensions.

The Senate has killed House bill 1554 relative to classes and capitals of insurance companies, in substance a part of House bill 6.

The bill relative to the duties of referees in fire insurance has been enacted.

New England Brevities.

Availing itself of the provisions of a law enacted this session the Massachusetts Accident Company, a stock organization, has reinsured the business of the Bay State Casualty Company, which was operated on the assessment basis. The newly acquired business will be known as the Bay State branch of the Massachusetts Accident, and will be managed by H. G. Hinkley and H. A. Harding, president and secretary, respectively, before its absorption. The business of the branch, hitherto restricted to Massachusetts and Rhode Island, will now be extended to the entire field covered by the Massachusetts Accident.

President Holcombe, of the Phoenix Mutual Life, after two years' service in the Hartford Board of Finance, is succeeded in that capacity by President Dunham, of the Travelers. Hartford is fortunate in obtaining the gratuitous services of leading underwriters in the management of its civic affairs.

Francis Peabody, in its day president of the American Insurance Company, of Boston, died recently at his home in Danvers, Mass.

Captain W. B. Sears, popular broker and agreeable gentleman, has taken desk room in the Martin L. Cate office, Boston.

W. B. Medlicott, of the Atlas, has again been selected as lecturer on fire insurance at the business school of Harvard University.

J. A. Kelsey, United States manager of the Aachen & Munich, and his brother, manager at Chicago of the Sun, with their wives, sailed from Boston on the Canopic Wednesday, the 4th inst., for a tour in Europe.

Following the admission to Massachusetts of the Teutonic of Pittsburg, Kaler, Carney and Liffler have been appointed agents for Boston and vicinity for the Pittsburg Underwriters, comprising the National, Teutonia, Allemannia, Ben Franklin and Humboldt fire insurance companies of

Pittsburg. Policies issued in Massachusetts are headed "Insurance Underwriters' Policy of the National of Pittsburg."

In a "Comet-ose" Mood.

The esteemed Boston "Transcript" offers the "actuality" annexed herewith:

PAYABLE IN ASBESTOS MONEY.

"This is an insurance office?"

"Yes, sir. Do you wish to take out a policy?"

"I do. I would like a policy covering the damage in case we collide with that cussed comet."

Report hath it that the Union and Fenix Espanol, reinsurance company of Madrid, intends entering the United States, and, in that event, depositing \$200,000 with the Connecticut Insurance Department, under the management of Ralph Folsom, formerly with Dickson & Tweeddale.

The removal of the Boston fire insurance brokerage firms conducted respectively by Richard B. Perrin and Henry A. Gordon & Co., from the former premises of A. M. Bullard & Co., to 30 Kilby street, the offices of Cyrus Brewer & Co., with whom A. M. Bullard & Co. have combined, is announced.

A smoke talk, the second of this season, has been set for Friday night, May 20, by the Boston Life Underwriters' Association, at which "Partnership and Business Insurance" is to be the topic of discussion. This subject had been assigned for the first smoker, but was deferred to make time for the splendid address by John W. Whittington, president of the National Association, of which an abridgment was presented in these columns at the time.

The agency for Boston and vicinity of the Teutonia of Pittsburg has been conferred on Rothery, Emery & Perkins.

Ide & Sewall, of Boston, who conduct a flourishing fire and casualty general agency, are now settled in a new and comfortable quarters on the fifth floor of the Oliver building.

Subject to certain amendments, Governor Hughes has approved the Calan automobile bill, which will bring about \$1,500,000 additional revenue to the State each year. Registration fees for cars will depend upon their horse power.

FIRE PROTECTION MEETING.

President Guenther, of the National Association of Local Fire Insurance Agents, has appointed the following to represent the organization at the annual three days' meeting of the National Fire Protection Association at Chicago next Tuesday: E. B. Case, Chicago; Henry H. Hickok, Burlington, Vt.; Ralph W. Lee, Washington, D. C.; George D. Markham, St. Louis, and E. C. Roth, Buffalo.

The National Association of Local Fire Insurance Agents is an active member of the Fire Protection Association. The delegates appointed are also associate members of that organization.

The Auto Subject.

The question of whether the appointment of another agency to write automobile insurance constitutes a departure from sole agency principles, referred to the Connecticut Association of Local Fire Insurance Agents by one of its members, has been handed up to the grievance committee of the National Association for consideration. The committee has decided that the question is a new one and should be referred to the coming convention. This will afford an opportunity to discuss the reasons governing the mighty intelligences presiding over some insurance departments in ruling that fire insurance companies may write casualty insurances and prohibits a casualty company reciprocal rights.

The celebration of the twenty-fifth anniversary of Manager Guile's control of the United States branch of the Sun Insurance office received appropriate recognition from the agents and brokers on May 11 in a complimentary premium shower, the favors coming from all over the country. The tremendous mail, the flowers and silver vase from the office staff, and the splendid salad bowl, fork and spoon from a few close friends, made Mr. Guile feel that the day was altogether worth while.

Home Office, HARTFORD, CONN.

UNCLE SAM'S SURETIES.

Away back in the now dim past when Uncle Sam first began business he followed the old rule of the English common law and its origin—the Mediterranean merchants system of "cautionment" of the sixth, and, perhaps, earlier century—in requiring a guarantee of contracts entered into, the original basis of credit, and credit evolutions, such as the present system of bank checks, and loans on commercial undertakings.

As a general rule the guaranties—(or bonds, so-called)—were never recoverable, owing to personal or political influences which shelved all complaints and claims. There were frequent cases of politicians "trading" in this form of trouble, and the big public knew of the conditions existing only as rumors and political gossip reached it. Ever unreliable this form of evidence afforded no reliable basis for the people to act and the grafter was in clover.

Conditions became so intolerable that finally Uncle Sam thought to install some modern methods in the conduct of his business and his Congress passed what is now known as the "Act of August 13, 1894," which authorized the acceptance of corporations as surety on bonds and guaranties and from that day to this politics and methods of grafting have been undergoing a rapid change. They have not been entirely reformed by it, but one of the meanest and most morally subversive avenues has been closed. So great has been the work of the corporate sureties on this line, and so much antagonism have they aroused on the part of the "politician for pecuniary profit" that they have been made the subject of about every imaginable form of grafting attack. Even the highest Federal officials have been persuaded to hinder the good work of these companies. It emphasizes the condition formerly existing, already referred to. In the old days any politician's brother—or son-in-law, or his cousin, uncle, or aunt—could rob, riot or rampage at pleasure, fully assured of immunity from punishment for deviations. With the advent of the corporate surety has come a change of conditions, the present results of which are shown in two distinct forms:

First: The rush of politicians to organize or become allied with surety companies. This was the first development.

Second: The "strike" bills aimed at the companies by the "statesmen" in both Congress and the State legis-

latures. This is the latest development, and it has been so persistently forced upon official circles that there is great perplexity existing on the part of those who are anxious to perform their full oath of office to the letter, but are puzzled by the clamor of the chair-warming office seekers. Thanks to the sound judgment of most of them they are realizing that the surety companies have rendered to the Federal and State public official service, in an economic and moral upbuilding sense, about what life insurance has done for the great body of the people generally in the prevention of the necessity for more almshouses, jails and orphanages. There is a great public economic principle involved which escapes the notice of the casual reader. For this reason alone the pending legislation at Washington and half-a-dozen or so of the States, is deserving of the calmest deliberation and consideration.

One Cobweb Brushed Away.

As an evidence of the awakening at Washington on the subject, the antiquated ruling of a century ago has been amended in the ease of postmasters. The earliest law required of these appointees two or more resident sureties who could each qualify in a sum double the penalty of the bond. In those days coonskins and wolf pelts were a common medium of exchange. When the act of August 13, 1894, became effective it was ruled by some wise (or otherwise) Solon in official position at Washington that it did not apply to postmasters, because the law governing the postal department made it incumbent on the sureties, in case of the death or default of the principal, to be responsible for the performance of the duties required by law and nominated in the bond until such time as a successor was appointed in due course.

The new act was too new to be actually comprehended, and it has taken sixteen years of its operation for the idea to percolate through red-tape Washington that it is really in force and effective, accounting largely for the present political "strikes" at surety companies. That very keen and alert Postmaster General, Hitchcock, who is now presiding over our postage stamps in Washington, is one of those forceful men who realize that conditions have changed from a century ago, and he gets into modern times by issuing yesterday a new ruling to the effect that a surety company may now be accepted as sole surety on bonds of postmasters.

Merely a straw, but it indicates progress.

CONTRACT BONDING DULL IN CHICAGO.

Considerable disappointment exists in some of the Chicago surety offices that there has been no greater revival of contract bonding. During the unusually severe and steady winter, it was stated that few contracts were being awarded because operations could not be commenced under them in such weather, but it was generally believed that the business would take quite a boom as soon as it became warmer. This boom has not materialized, at any rate not as far as some of the offices can see. But few large buildings are in course of erection downtown now and but few are in immediate prospect. One prominent office claims that even the usual demand for small contract bonds has fallen off.

The legal preliminaries to the increase in capital of the Illinois Surety have been almost completed. Written consents have been received from more than the required number of stockholders. The consents of all the directors have not been secured yet, as a few of them are not at their usual places of business and have not answered the company's request for their consent.

DON'T ROCK THE BOAT.

The latest "bulletin" from the insurance hospital is to the effect that the United Surety Company of Baltimore is convalescing from its recent severe halving operation for an acute attack of appendicitis. This bulletin is issued by Insurance Commissioner Crouse, of Maryland, in charge, in response to inquiries as to the company's present status in view of the action of New York and some other important States canceling its license. These inquiries were based upon the common knowledge of the scandals and seemingly endless chain of incompetents in control which shadowed the company's progress.

This "bulletin" of Commissioner Crouse is in the form of an open letter to Thomas H. Bowles, who acquired and represents the new controlling interest of the company, and who expects to rescue it from the wreckers' ditch into which it was driven and nearly murdered, and reads assuringly:

The report of examination made by examiners of this department as of February 28 showed that the capital of the company (\$500,000) had become impaired to the extent of \$94,018.85, after setting aside claim reserve and reserve for unearned premiums and all other liabilities. The reduction of the capital to \$250,000 gets rid of the impairment, and provides a surplus over all liabilities of \$155,981.15, and, including the reduced capital, a surplus to policyholders of \$405,981.15.

I, therefore, feel justified in saying that, in my opinion, the United Surety Company is now on a sound financial basis, well able to protect all outstanding contracts entered into by it, and that its condition leaves no ground for any reasonable doubt as to its entire solvency.

President Penniman writes "The Chronicle" that "the matter of shaping the affairs of the United Surety Company is being earnestly worked upon and at the earliest possible moment you will be fully advised of the results," a consummation devoutly to be wished. But there must be a re-organization that differs from the last one—so-called—which was merely a shifting of the same surety "talent," if public confidence is to be anticipated.

ACCIDENT INSURANCE OF SERVANTS.

According to the "Insurance Record," of London, two things are taking place relative to this insurance of domestic and other servants under the Workmen's Compensation Act of 1906.

First, the volume of business is showing a strong tendency to fall off.

At the outset the very cheap premium rates, ranging from 2 shillings to 2 shillings 6 pence, or from 50 cents to 62½ cents per annum, together with a dread of the possibility of being held for a lifelong pension to a servant injured by accident, caused a great boom in this business; but it is said that in the households, where there have been no accidents, now that the novelty of the provisions of the act has worn off, many householders cease to appreciate the necessity for this precaution. Thus, notwithstanding that for servants working at average wages, it is estimated that in event of total and permanent disability caused by accident occurring while at work, the employer would be under obligation to pay \$100 a year throughout life.

The second disturbing fact is that, although the business has been large, there has been little, if any, profit in the "tariff companies," that is the companies which agreed upon rates of premium and have maintained the same. It is said that £2,030,230 have been received in premiums by these offices and that the average net profit on the business has been but 2 per cent. The companies which have not been bound by the agreement have collected £521,788, with an average net loss of 9.73 per cent. On the total premiums of all these companies, amounting to £2,552,012, there has been a net loss of 4/10 of 1 per cent.—that is, on a premium income of about \$12,500,000. The companies on the whole have made no money at all.

If there is so much money in fire insurance as the Indianapolis business men declare, why don't they start a lot of companies and get their share of these alleged "profits"?—"Insurance Post."

ANOTHER PROMOTION FIASCO.

That is a suggestive situation of promoter Hardy's Empire Casualty Company, of West Virginia (domiciled presently at Philadelphia, Pa.), proposition which is now on Gossip Street, America. Two weeks ago "The Chronicle" published a part of the prospectus of the Columbus Securities Company of New Jersey, organized to finance and "hold" struggling young casualty and other insurance companies, two of which, including the Empire, it was stated, had already passed to its control. Now a receivership for the Empire is impending.

It seems that the West Virginia concern combined with another weakling, chartered out in Ohio, and another one in Pennsylvania, as a sort of last resort of the promoters to pull them all into the same dry dock and articulate the ossified remains. This receivership proposal puts a crimp in the promoters' schemes, and it is quite probable that the peripatetic promoter will have to devise some new ones or go to work to earn an honest and respectable living. As one first step upward from their present work and toward decency these light-fingered gentry might try porch-climbing or pan-handling, and graduate on to the police force, and later to the Pittsburg City Council or the Illinois Legislature.

OPPOSES REFORM BILLS.

One of the greatest obstacles encountered by the Insurance Department in an attempt to suppress wild-cat fire insurance operations is clearly outlined in the action yesterday of the New York Board of Trade and Transportation in adopting a resolution requesting that Senate bills 1158 and 1394, prohibiting solicitation, acceptance or placing of insurance in companies not authorized to do business in this State should not become a law.

The reasons for this action, as set forth in the text of the resolution, were that the provisions of the bill in certain instances appear to infringe on the right of contract by imposing restrictions upon the procurement of insurance upon property when located in any other State than New York, which would operate to the injury of business interests in this State by hampering the procurement of insurance.

The logical outcome of an inadequate supply of insurance, which enables the "outside" companies to write in this State, would seem to be the opening up of an opportunity for cap-

ital to organize more companies. The Board of Trade seems to be opposing its own best interests in defending present rank conditions by opposing well-directed efforts at reform.

A PUZZLER.

It is announced that the Texas Surety and Insurance Company, which has been organizing at San Antonio, has a capital of \$200,000 paid in and a surplus of \$50,000, with which it will begin writing a general surety business. The officers are: I. T. Pryor, president; J. O. Terrell, first vice-president and treasurer; J. M. Kincaid, third vice-president; John H. Bickett, fourth vice-president and manager; Thomas G. Leighton, secretary.

Just how far that small surplus will carry the concern is a puzzler. Again, how the company can hope to get ahead is another. All the surety business in the State of Texas, if it were possible for one company to corral it, would not be supporting. Then the deposit law of Texas operates in a retaliatory way, and bars the company from other States. All things considered there seems some rather rocky sledging ahead for the young one.

A LUCKY TURN.

The marine underwriters are rejoicing over yesterday's cable news that the big American liner Minnehaha had been successfully floated off the rocks of the Scilly Islands, where she struck in a fog April 18, and has been held fast in a clutch that has never before been known to relinquish a victim. This is the remarkable feature of the case, and is said to be due entirely to the fact that nature held in leash all the elements of wind and water for nearly a month in what is one of the most dangerous parts of the Atlantic. There seems something in the incident, from the insurance viewpoint, that is calculated to make the superstitious stronger in a conviction that there is something just a little more than luck in it.

I notice that a number of agents are making changes from the Companies they were formerly with to other Companies. Also, that none of these agents have been in correspondence with the Philadelphia Life. Perhaps it is due to the fact that they do not read our advertisements, and I think that it would pay the agents, whether they are working for this company or not, to read these advertisements, as many a time there appear in the advertisements little arguments that would help them to secure business. For instances:—How many agents to-day are using the argument that they are insuring income, which is really what you do on every policy that you have caused to be issued by a Life Insurance Company? Now why don't you get in touch with the new up-to-date income policy of the Philadelphia Life that is different in all details from that issued by any other Life Insurance Company? Write Perry to-day.

ACCIDENT INSURANCE.

The National Association of Employing Lithographers announces that it is going to put into operation, through an insurance company, a plan furnishing employees insurance against sickness, accident and death, the premiums for the same being paid in whole or in part by the members of the association. Some years ago this association fought to a finish the labor unions among its employees; and it is believed that the present proposal to give an eight hour day, commencing January 1 next, is for the purpose of preventing the members from again organizing.

ARTHUR E. CHILDS, President.

LEADING FIRE COMPANY OF THE WORLD

[of Liverpool,

England.]

WHEN THE BRAIN GETS BUSY.

Improved methods of construction, protection and rating are dealt with by Arthur Hawkshurst, insurance manager for the big corporation of Marshall Field & Co., of Chicago, in testimony just given before the Illinois Fire Insurance Commission, of recent birth. Mr. Hawkshurst has made insurance in its varied forms, as applied to his corporation's commercial credits a specialty, therefore what he says has particular value.

On the subject of improved construction and better protection he furnishes a statement of the reductions made for improved construction and protection under schedule rating. In his testimony before the commission of reductions for sprinkler equipments, he said:

No information I can give you will answer your question half so well as the rates themselves. (The 25 per cent. advance on all non-sprinklered and non-fireproof risks is still in force.) The rates given are for \$100 of insurance:

Wholesale department mill construction:

	Without Automatic Sprinklers.	With Automatic Sprinklers.
Sections 1 and 3, building	\$1.40	\$0.31
Sections 1 and 3, stock	1.71	0.42
Section 2, building	1.87	0.37
Section 2, stock	2.25	0.48
Fireproof warehouses:		
Buildings	0.39	0.11
Stock	0.83	0.21
Mill construction warehouses:		
Buildings	1.01	0.12
Stock	1.21	0.21
Retail department:		
Buildings	0.71	0.28
Stock	1.61	0.53
Zion City lace factory:		
Building and contents	1.12	0.15

From these figures you can see that there is no argument to be used against adopting these very efficient protectors against fire, not to speak of the saving in insurance cost.

What the sprinkler equipment has done so far for us, is evidenced by the fact that our wholesale building has been saved three times from serious loss by the prompt working of the sprinklers. We have had one or two light fires in the retail, which one head promptly put out. The warehouses, up to the present time, have had no accidents. I am a firm believer in schedule ratings and proper allowances for all improvements installed. They will all pay for themselves in a short time and do more than anything else to reduce the awful loss.

AETNA LOSES.

At Hartford, Conn., on Monday the Superior Court rendered judgment for \$4,708 against the Aetna Indemnity Company, of that city, in favor of a plaintiff from Minneapolis, Minn. The very singular feature of the case was that the plaintiff was compelled to come from Minnesota to Connecticut to enter suit and that the judgment

was even then obtained through failure of the defendant to appear—"judgment by default," termed legally. The suit was on a building contract bond, on which the defendant was surety for Robert Wilson, of Boston, for work in Minneapolis.

This is a rather good argument in favor of Federal control of inter-state insurance matters, even if national control is left out of the question for the present.

FOR BETTER FIRE PROTECTION.

The Merchants Association of New York, the one civic organization that has done more than any other to agitate insurance discussions (and with more or less good or bad effect) is now out through its insurance committee—Frank R. Chambers, Sr., chairman—with a demand for modern fire appliances in all office buildings, department houses, business buildings,

spect the buildings to see how the fire regulations are obeyed."

"We do," said Chief Croker.

"If you inspect mine I never hear of it," said Mr. Chambers.

"But we do," said the chief.

The outcome of the interview is not known.

The final elimination of Andrew Freedman from the slightest connection with the Casualty Company of America last week marks the opening of an era for the company that promises to keep it free from the pall and stench of Tammany politicians that has so long retarded its progress and has made it a target for opposing and equally vicious political elements.

Insurance Commissioner Beedle, of Wisconsin, has dismissed the charges of rebating made against Walter and Christ Shroeder, of Milwaukee, representing the American Fidelity Fire. Charges were made by the Aetna that the defendants had lifted three policies of the Beals Torrey Shoe Company.

TO WIN IN COMPETITION

Represent the Company whose agents have the strongest fighting material and the most telling arguments. Everyone knows the superiority in low cost to policyholders, (due to high interest earnings, low death and expense rate) of

HOME OFFICE OF THE

Metropolitan Life Insurance Co.

(INCORPORATED BY THE STATE OF NEW YORK, STOCK COMPANY)

The Company OF the People, BY the People, FOR the People

PROOF OF PUBLIC CONFIDENCE

This company has more premium paying business in force in the United States than any other Company, and for each of the last 16 years has had more New Insurance accepted and issued in America than any other Company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburg, Baltimore, New Orleans and Buffalo.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.

Curtate Summations of D Column.

Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
Divide temporary insurance values by immediate temporary annuities.

Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.

Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.

Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.

Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.

Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.

Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.

Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.

Warranted Commissions for New Business.

Surrender Values.

Dividends.
For these purposes the "select and ultimate" will be most useful.

The Equitable In Employers' Liability?

Also a Report of Manufacturers' Association Committee.

At the meeting of the National Association of Manufacturers at the Waldorf-Astoria on Tuesday, the 17th inst., Henry L. Rosenfeld, insurance assistant to President Morton, of the Equitable Life Assurance Society, delivered an interesting address entitled "Co-operation and Compensation vs. Compulsion and Compromise in Employers' Liability."

In his address he took a position in opposition to the present method of dealing with consequences of industrial accidents, and stated it as his opinion that the employer "would infinitely prefer to employ a system based upon principles of humanitarianism." He also thought that employers' liability insurance is unsatisfactory, in view of the fact that the premiums "have gone in relatively small proportion as direct benefits to the injured or his dependents." Accordingly, he favored the adoption of a "system of fair and adequate compensation for injury, combined with indemnity for wage-losses incurred by illness, and with an adequate provision for old age and death benefits," which in his opinion, "would do much to bring about and maintain harmonious relations between employer and employee."

Workmen's Compensation Acts Unsatisfactory.

Mr. Rosenfeld is of the opinion that the various workmen's compensation acts are unsatisfactory, and that they would be yet more unsatisfactory in this country, both because of the State

lines and also because of other embarrassments here, such as the necessity for using a jury system for making awards. Accordingly, he offers the following as a better solution:

Surely it is the part of wisdom that the manufacturer should select some plan of his own volition which would leave him free to meet the liabilities incident to accident, in his own way, by the adoption of some rational system sufficiently broad to be comprehensive and sufficiently liberal to forestall coercion. The responsibility rests with manufacturers and other employes of labor to adopt a system of compensation based upon fair, just and humane principles, voluntarily applied and susceptible of so satisfactory operation by reason of its equities and advantages that it will accomplish more than merely adjusting financial differences. Compensation by agreement with employes without necessity for resort to existing laws and without recourse to courts, will tend to establish a feeling of satisfaction which will be a powerful factor in minimizing wage difficulties and settling other differences of opinion which are inseparably associated with the transaction of large enterprise.

Practical Plans.

In connection with this he mentions the plans recently adopted by the United States Steel Corporation and the International Harvester Corporation, which he deems practicable by reason of their business resources and great numbers of employes, but he says of this that "the average manufacturer has neither the time nor the inclination, nor as a general proposition, a sufficient number of employes nor the capital to establish his own insurance company."

In his opinion "the ideal insurance scheme should provide (and that it can, is evidenced by the German system) contributory payments by the

employe in proper and fair proportion."

He says that "existing institutions, in the main, have been tried and found wanting," and that "it can fairly be said that there has been a disproportionate return in benefits to the injured employe for the premiums paid by the employer," and he cites the fact that the total amount paid in adjustments was in 1909 only about 54 per cent. of the premiums received by the liability insurance companies reporting to the department of New York; he contrasts this with the 10.2 per cent. of the receipts, which is used for management expenses in the mutual associations of employers under the German system.

Mutual Associations Not a Success.

Mr. Rosenfeld does not think there is any reasonable prospect of relief by the organization of mutual companies. Concerning this he says in part:

Any mutual organization in insurance is necessarily experimental until it has survived the earlier vicissitudes of the business and by a period of probation has established its own equation in business life. The hazards of inexperience and of ignorance are the two great dangers confronting all new business ventures, especially insurance of any kind. A mutual employers' liability company organized for the purpose of protecting only manufacturers against certain contingencies cannot hope for the large measure of usefulness nor to accomplish what can be done by a corporate, co-operative organization founded upon broader lines and controlling other branches of profitable business. Further, it is doubtful whether purely mutual indemnity organization can be effected under the laws of many States, the requirements of a cash capital and surplus in the more important States being essential. Nor must it be forgotten

that policyholders in mutual organizations are liable for all losses incurred and must themselves pay the price of incompetent, extravagant or ignorant administration.

The Equitable Considering Entering the Field.

Quite the most surprising portion, however, of his address was its close, in which, after describing the "system of mutual or participating insurance to be conducted by a company with capital stock and which would charge fixed premiums, he said:

The president of the society with which I have the honor of being associated in an official capacity, is deeply interested in this subject and has given it much thought recognizing as a business man and as a former large employer of labor its growing importance. He has a keen desire, if it can be done and if it meets the approval of his board of directors, to place the services of his company at the disposal of the manufacturers and others, in performing this important public function, feeling that by so doing one of the great American life insurance companies can in largest measure fulfill its usefulness and render the greatest service. The matter is receiving the earnest and serious consideration of the society, and while at the present moment it is not possible to state definitely whether it will be found practicable and feasible for our institution to take up this branch of insurance, yet inquiry is being directed toward this end. Thorough investigation will be made here and abroad with a view to getting accurate and reliable data upon which to construct plans for the purpose of supplying this protection in adequate form and at proper cost.

This gives rise to the interesting surmise: "Was it for this that J. Pierpont Morgan acquired the control of the stock of the Equitable?"

Professor Hutton and Miles M. Dawson Also Heard.

In addition to Mr. Rosenfeld, Professor Hutton, of the American Museum of Safety, delivered an illustrated address upon the "Prevention of Accidents," which was well received; and the last address of the day upon these subjects was by Miles M. Dawson, consulting actuary, on the topic "True Economy in Compensating for Industrial Accidents," in which Mr. Dawson took a position strongly favoring in the main the suggestions of the committee on industrial indemnity insurance which was at the same session presented to the association.

Report of Association's Committee.

This report states among other things, that 25,000 communications were sent to employers, together with a proposed preliminary report describing the systems in use in different countries and 10,000 replies were received. Of the members of the Na-

tional Association of Manufacturers more than 80 per cent. answered.

Through the replies received it was found that "90 per cent. are dissatisfied with the working of the present employers' liability laws, and present employers liability insurance."

It was also found that "the large majority of our members favored a modified form of the German system"; but in the opinion of the committee "whatever the advantages of the various European systems may be, none of them can be transplanted to this country as a whole."

The report contains many quotations from various authorities setting forth various views upon the subject, and expresses the following views, among others, for itself:

"It is not unreasonable to think that the 87½% of our members who now carry liability insurance might be able to carry contributory indemnity insurance in a mutual company to much greater satisfaction all around, and at little or no greater cost than their present liability insurance"; also that "we believe that a good bill should contain provisions for indemnity insurance on the contributory plan, that is, to be paid partly by the employer and partly by the employee." In addition, the committee recommends the following as an immediate program: "Let us have sound legislation as soon as practicable, but meanwhile let us push voluntary relief measures with all our might."

Favors a Contributory Plan.

In favor of the contributory system the committee cites the following:

The New York Commission favors the contributory system, but thinks it cannot be made compulsory under our constitution. The Minnesota Commission favors the contributory system. Without a single exception all the experienced and prominent men with whom we have corresponded favor the contributory system. More than 95 per cent. of our members, as well as outside manufacturers, who are co-operating with us in this matter, favor the contributory system, and we recommend it.

The general recommendations are as follows:

First—The prompt establishment of a complete and elastic insurance proposition. A system based on mutuality, which will insure at reasonable rates one or all of the risks which are now worrying employer and employee, that is, employers' liability, accident, sickness and old age indemnity. It is not reasonable to expect that a perfect insurance system can be immediately established, but it is possible and important that the immediate scheme is at least part mutual and contributory, that it is financially sound, headed by men whose reputation is unquestioned, executed by ex-

perts, and that no financial obligation rests upon the National Association of Manufacturers.

Second—The immediate organization of an industrial accident prevention and statistical department directly or indirectly under the control of the National Association of Manufacturers. The work of the department should embrace general advice and investigation for members, investigation and exhibition of approved safety devices, inspection of all members' shops, and such other action as will in any way promote prevention of accidents and provide statistics as to the cause, prevention and remedy for accidents and occupational diseases.

Offers of prizes for the best prevention apparatus and safety devices should be part of the work of this department.

Third—Continued and increased interest in legislation. Co-operation with legislators, legislative committees, State or national commissions, to the end of furthering constructive laws which, by permission or compulsion, provide for equitable compensation insurance based on mutuality and the contributory principle. Co-operative opposition to radical and unjust legislation would naturally be part of the work.

Fourth—Continued and increased activity in the direction of investigation of the whole subject through a new committee and through all other available channels. Our association, to serve as a clearing house for matters pertaining to industrial liability and indemnity, must gather, through a new committee, additional information, especially as to the workings of European laws and systems, and provide for a much more general and thorough understanding of the whole subject so that it may serve as a leader in bringing the position of the United States in this matter on equality with that of the best industrial nations.

Among the resolutions offered by the committee are the following:

That an equitable mutually contributory, indemnity system, automatically providing indemnity for victims of industrial accidents, and their dependents, is required to reduce waste, litigation and friction, and to meet other requirements of an enlightened industrial nation.

That, regardless of legislative action, we inaugurate, with the least possible delay, a system of mutual con-

tributory industrial accident indemnity insurance, this system to be elastic enough to provide for voluntary contributory sickness, old age and death insurance if later deemed advisable.

Opposes Compulsory Sickness, Invalidity and Old Age Insurance.

The committee also makes a report especially upon sickness, invalidity and old age insurance, in which it expresses the opinion that compulsory provisions "would be a departure from accepted doctrines, contrary to American ideas and detrimental to thrift and economy," and, therefore, disapproves the same and "approves voluntary sickness and old age relief in private employment and authorizes its officers to encourage it by all reasonable means."

Memorial Services for Chairman of Committee.

The committee which rendered the report was headed by ex-President James W. Van Cleave of St. Louis, who died just before the convening of the association, and whose funeral took place in St. Louis while the association was in session on Tuesday afternoon, and just prior to the reading of the report. Accordingly, at the exact time when the funeral services were conducted in St. Louis the association took a recess from its labors and held impressive memorial services in honor of its former president, whose last life work was embodied in the report under discussion.

CANADIAN VIEW OF THE CANADIAN ACT.

"Office and Field," of Toronto, in its issue of May 5, says of the new insurance act:

As it now goes on the book the act is almost what the insurance men would have advised at the first. It makes all necessary concessions to public interests, while conserving some rights of the companies and fieldmen.

Wherever the act is discussed, except among the fire insurance companies, there is an opinion that it is about all right. And that's more than can be said of the acts of most governments.

"The Chronicle," of Montreal, says of it:

In the end what was evil was cast out and good was added, so that the act in its final shape is a reasonable and acceptable piece of legislation. Some may not be entirely satisfied, but on the other hand no one is outraged. The fairness and impartiality of the Government stands on record in this bill.

"The Chronicle" Agrees in the Main.

With all of which good opinion of the act, "The Chronicle," of New York, finds itself in general agree-

ment. The Canadian act is free from the limitations and restrictions which marred much of the recent legislation in this country, however admirable the same has sometimes been in other regards.

The one serious defect of the Canadian act is that it does nothing worth while, either by publicity or otherwise, toward exposing agency extravagance and waste, or toward aiding in establishing a standard for measuring cost of new business which has long been excessive in Canadian companies. The superintendent of insurance may be able to accomplish this, however, through proper exercise of his powers of inquisition. The chief requisites are: Publicity as to scales of dividends, as required in Great Britain for many years since and in the United States in recent years. Publicity as to the aggregate of the maximum allowed margins under the new Canadian minimum standard law, upon the new business of the year, for each company, whether so valuing or not. Publicity as to aggregate cost of new business.

Enforcement Asked For.

"Office and Field" is calling for enforcement of the new law, which, of course, in turn calls for a final decision as to the powers of the Dominion under the British North America Act. The following is from the editorial in "Office and Field," already referred to:

First of all comes the imperative demand that the Government attends to the enforcing of its provisions. It should be unnecessary to say anything about this feature of the aftermath. If a law is made it should be mere redundancy to add that the forces of the land should be behind the enforcement.

But, unfortunately, there is necessity for drawing the attention of the Government to this part of law making. For years we have had an insurance act that has made fair reading—but has stopped there. For some unexplainable reason the Government has candidly announced that the enforcement of that law did not rest

with it. Upon whom it did rest has not been made known intelligibly up to the time of writing. Presumably the Government was leaving it to private prosecution. There are two or three reasons that could be advanced for the indifference of the Federal authorities to the manner in which the insurance act was observed; but none of them need be given here.

Probably the prospect of the new act has deterred the iron hand of the Government ever since 1906. At any rate the act has been openly broken, and even protests to the department have met with no official recognition in the way of attending to a neglected duty. Now everyone concerned should see that the Government enforces the act it has placed on the statute books.

IN CARRION COMPANY.

The interest that a few life insurance companies are showing in the remains of the United States Life Endowment Company of Chicago is a strong reminder of the action of buzzards when a dead horse has lain unburied for an appreciable length of time. That concern was rotten. Some of its business was written at a rate of \$1 a month for \$5,000 insurance. Its medical selection is spoken of as a farce. In one of the suits brought against it by Superintendent Potter of Illinois, Attorney Ryon charged in court that the company had been looted by certain of its officers. Its business consists in part of what it took over from three or four defunct concerns of similar character. Yet there are known to be at least one assessment company and two legal reserve companies that have seriously considered taking over its business. If the job is done in the usual way there will be a rake-off for somebody's benefit, and it will not be the claimants for about \$200,000 of death losses. It certainly is a savory mess to be added to the membership of any company, and especially of a legal reserve company, not so large as to be able to take on such an amount of that kind of business without feeling it.

COME AND PROSPER

Among the 15 largest American companies (excluding industrials) this is our 1909 ranking:

First place in percentage of gain in insurance in force; *third place* in gain over 1908 in amount of paid-for new business.

New business first quarter of 1910 far in excess of first quarter of 1909. Our agents are busy and prosperous—and are not driven by the Home Office.

New York Agency: 1401 Empire Building, 71 Broadway.

MASSACHUSETTS MUTUAL LIFE INSURANCE COMPANY,

Incorporated 1851

Amalgamation of Insurance Companies.

Wise Provision of British and Canadian Laws.

There are virtually no provisions in the insurance laws of any State of the United States, for the amalgamation of insurance companies. Reinsurance of one company in the other and the dissolution of the reinsured company—always a humiliating thing and, in view of the deposit laws, of diversity of domicile and other complications, sometimes a difficult or even impossible undertaking—constitute the only practicable course here. That, to the average mind, spells failure; these reinsured companies are often referred to as "busted." Moreover, there is often great loss of insurance in force, due to the disturbance, caused by the transfer.

It is singular that the lesson should not have been learned here. Even the crash of companies in the 70s, when reinsurances proved no solution for the problems, failed to cause legislatures to give the matter serious attention; although the earlier wreck of companies in Great Britain had resulted in a merger or amalgamation act, among other remedies. Since that act passed, there has been no recurrence of the disasters of former days.

The New British Act.

The British law has recently been amended in some particulars and re-enacted as a part of the new Assurance Companies' Act, 1910. It reads as follows:

Section 13.—(i) Where it is intended to amalgamate two or more assurance companies, or to transfer the assurance business of any class from one assurance company to another company, the directors of any one or more of such companies may apply to the court, by petition, to sanction the proposed arrangement.

(ii) The court, after hearing the directors and other persons whom it considers entitled to be heard upon the petition, may sanction the arrangement if it is satisfied that no sufficient objection to the arrangement has been established.

(iii) Before any such application is made to the court—

(a) Notice of the intention to make the application shall be published in the "Gazette"; and

(b) a statement of the nature of the amalgamation or transfer, as the case may be, together with an abstract containing the material facts embodied in the agreement or deed under which the amalgamation or transfer is proposed to be effected, and copies of the actuarial or other reports upon which the agreement or deed is founded, including a report by an independent act-

uary, shall, unless the court otherwise directs, be transmitted to each policyholder of each company in manner provided by section 136 of the Companies Clauses Consolidation Act, 1845, for the transmission to shareholders of notices not requiring to be served personally: Provided that it shall not be necessary to transmit such statement and other documents to policyholders other than life, endowment, sinking fund, or bond investment policyholders, nor in the case of a transfer to such policyholders if the business transferred is not life assurance business or bond investment business; and

(c) the agreement or deed under which the amalgamation or transfer is effected shall be open for the inspection of the policyholders and shareholders at the offices of the companies for a period of fifteen days after the publication of the notice in the "Gazette."

(iv) No assurance company shall amalgamate with another, or transfer its business to another, unless the amalgamation or transfer is sanctioned by the court in accordance with this section.

Section 14.—Where an amalgamation takes place between any assurance companies, or where any assurance business of one such company is transferred to another company, the combined company or the purchasing company, as the case may be, shall, within ten days from the date of the completion of the amalgamation or transfer, deposit with the Board of Trade—

(a) certified copies of statements of the assets and liabilities of the companies concerned in such amalgamation or transfer, together with a statement of the nature and terms of the amalgamation or transfer; and

(b) a certified copy of the agreement or deed under which the amalgamation or transfer is effected; and

(c) certified copies of the actuarial or other reports upon which that agreement or deed is founded; and

(d) a declaration under the hand of the chairman of each company, and the principal officer of each company, that to the best of their belief every payment made or to be made to any person whatsoever on account of the amalgamation or transfer is therein fully set forth, and that no other payments beyond those set forth have been made or are to be made either in money, policies, bonds, valuable securities, or other property by or with the knowledge of any parties to the amalgamation or transfer.

In Canada, a yet more developed,

though not more comprehensive, provision for amalgamation has been made in the insurance act, adopted May 4, liberal extracts from which were published in last week's "Chronicle." This, being the first thoroughgoing provision for merger of insurance companies ever made on this continent, well deserves reproduction in these columns. It is as follows:

Amalgamation and Transfer.

52. Any life insurance company which is within the legislative power of the Parliament of Canada may amalgamate its property and business with those of any other such life insurance company or may transfer all or any portion of its policies to or reinsure the same in any other such company, and may transfer its property and business or any part thereof to any other such company, or may reinsure the policies or any portion thereof of any other such company, or may purchase and take over the business and property or any portion thereof of any other such company, and such companies are hereby authorized to enter into all contracts and agreements necessary to such amalgamation, transfer or reinsurance upon compliance with the conditions hereinafter in this section set forth.

2. Any life insurance company which is within the legislative power of the said Parliament is hereby authorized to enter into an agreement or agreements with any other life insurance company which has power to make the same; to reinsure the policies or any portion thereof of such other company; or to purchase and take over the business or property or any portion thereof of such other company.

3. When an agreement for any such amalgamation, transfer or reinsurance has been entered into, the directors of the companies which are parties to such agreement may apply by petition to the Treasury Board to sanction and confirm the same, and the Treasury Board, after hearing the directors and other persons whom it considers entitled to be heard upon the petition, or giving them an opportunity to be so heard, may confirm the same if it

1860 50th YEAR 1910

HOME LIFE

Insurance Company of New York.

GEORGE E. IDE, President.

Assets	\$23,626,018.63

(Including Deferred Dividend Fund)	
Dividend Endowment Fund	2,119,044.00
(Deferred Dividends)	1,917,117.00
Net Surplus	1,767,327.00
Insurance in Force	92,532,583.00

The record for 1909 shows the following GAINS:

Insurance in Force	\$4,164,239.00
Assets	1,917,117.00
Deferred Dividend Reserve	148,581.00
Contingency Reserve (Surplus)	655,149.17

is satisfied that no sufficient objection to the arrangement has been established.

4. Before any such application is made to the treasury board notice thereof together with—

(a) a statement of the nature and terms of the amalgamation, transfer or reinsurance as the case may be; and,

(b) an abstract containing the material facts embodied in the agreement under which such amalgamation, transfer or reinsurance is proposed to be effected; and,

(c) copies of the actuarial or other reports upon which such agreement is founded, including a report by an independent actuary; shall be served on the shareholders and on the holders of all policies in Canada other than industrial policies of each company: Provided, however, that the superintendent may dispense with the service of such documents on the policyholders of the reinsuring company.

Such notice and documents shall be served by being transmitted through the postoffice directed to the registered or other known address of each such shareholder and policyholder, and within such period that they may be delivered in due course of delivery thirty days at least before the day appointed for the hearing of the application.

The agreement under which such amalgamation, transfer or reinsurance is proposed to be effected shall be open to the inspection of the policyholders and shareholders at the principal office of the company or companies for a period of thirty days after the issue of the abstract herein provided for.

5. A copy of such notice shall also be published in "The Canada Gazette" at least thirty days before the application is made; but this subsection shall not apply to any company which issues industrial insurance.

6. The Treasury Board shall not sanction any amalgamation, transfer or reinsurance in any case in which it appears to the board that the policyholders representing one-fifth or more of the total amount assured in any company which it is proposed to amalgamate, or in any company, the business of which it is proposed to transfer or reinsure, dissent from such amalgamation, transfer or reinsurance.

7. No company shall be permitted to amalgamate its business with, transfer its business to, or reinsure its business in any other company, if the capital of the combined companies after such amalgamation, or of the continuing company, after such transfer or reinsurance, shall be impaired, the policy and annuity liabilities of the combined or continuing company being calculated on the basis prescribed in subsections 2, 4 and 6, respectively, of section 42 of this act.

8. When an amalgamation takes place between any companies, or when the business of one company is transferred to or reinsured in another company, the combined company or the continuing company, as the case may be, shall within ten days from the date of the completion of the amalgamation, transfer or reinsurance, de-

posit with the superintendent the following documents, that is to say:

(a) Certified copies of the statement of the assets and liabilities of the companies concerned in such amalgamation, transfer or reinsurance; and,

(b) A statement of the nature and terms of the amalgamation, transfer or reinsurance; and

(c) A certified copy of the agreement under which such amalgamation, transfer or reinsurance is effected; and,

(d) Certified copies of the actuarial or other reports upon which such agreement is founded; and,

(e) A declaration under the hands of the president and manager of each company that to the best of their knowledge and belief every payment made or to be made to any person whatsoever on account of the said amalgamation, transfer or reinsurance is therein fully set forth, and that no other payments beyond those set forth have been made or are to be made either in money, policies, bonds, valuable securities or other property, by or with the knowledge of any of the parties to the amalgamation, transfer or reinsurance.

9. No company shall amalgamate with another company, transfer its business to or reinsure its business in another company, unless such amalgamation, transfer or reinsurance is sanctioned by the Treasury Board in accordance with this section: Provided, however, that this section shall not apply to the contracts of reinsurance made by companies in the ordinary course of their business.

10. Subsections 4, 5 and 6 of this section shall not apply to the reinsurance of a Canadian company of the business of a company which is not and never has been licensed to transact business in Canada.

53. No life insurance company licensed under this act, nor any person, firm or corporation on its behalf, shall, in respect of its Canadian business, pay or allow to any agent, broker or other person, firm or corporation for procuring an application for life insurance, for collecting any premium thereon or for any other service performed in connection therewith, any compensation other than that which has been determined in advance.

54. No such life insurance company, and no person, firm or corporation on its behalf, shall make any loan or advance without adequate security, to any person, firm or corporation soliciting or undertaking to solicit applications for insurance; nevertheless advances may be made to any such person, firm or corporation for travelling expenses or against commissions or other compensation to be earned in respect of premiums, but such advances shall not be allowed as assets in the superintendent's annual report prepared for the Minister.

55. No salary, compensation or emolument shall be paid to any director of a Canadian life insurance company for his services as such director unless authorized by a vote of the members in the case of a mutual company, and by a vote of the shareholders and other members, if any, in

(Continued on Page 10.)

AN ANNOUNCEMENT.

Mr. Alfred B. Dawson has disposed of his interest in The Chronicle Company, Limited, publishers of this paper, and has resigned as president of the company to engage in other business. He departs with the best wishes of all connected with "The Chronicle." Mr. Miles M. Dawson, who has been interested in the company since 1903, and who was president from 1903 to 1907, inclusive, has been elected president.

SUITABLY COMMEMORATED.

The 34th anniversary of the birth of P. D. Gold, vice-president and manager of the Jefferson Standard Life Insurance Company, of Raleigh, N. C., which took place on the 15th inst., was suitably commemorated by the agents under his supervision securing and forwarding applications for \$146,500 new business, each application endorsed:

May 15, 1910. Birthday of Vice-President and General Manager P. D. Gold, Jr.

The Commercial Casualty Company of Newark, N. J., has been admitted to the State of Pennsylvania.

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)

Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

NEW JERSEY ALTERNATIVE THREATENED?

Significant Remarks at Home Life Semi-Centennial.

At the banquet to celebrate the fiftieth anniversary of the Home Life Insurance Company, which took place at the Plaza, Tuesday evening of last week, Hon. Wm. H. Hotchkiss, Superintendent of Insurance for New York, is reported to have made the following statement:

It is interesting to note how the same things look from different points of view. Some of the misunderstandings which have occurred between the State Department and the insurance companies are due to our different points of view, and some to a different trend of mind.

Some look on supervision as a necessary evil; some look on it with arrogance, and some are thankful for it, as it, they think, gives the seal of the State to the work of the companies. This is wise, because the great public, of which we all are part, demand that the Government should supervise.

I believe in a supervision that supervises. We are passing through an era in which we must choose between a supervision which supervises or a supervision which puts a representative of the department in every directors' meeting. I hope and pray that this may never come. I am here to express one thought that the supervisor and supervised shall work together for the common good.

President Ide, on the contrary, made a plea for the removal of restrictions which he deemed unnecessary, superserviceable and oppression and for relief from over-supervision, in part as follows:

Perhaps 98 per cent. of the men with whom we do business are honest. It is not the business of a great State to curtail the usefulness of 98 per cent. of its citizens in order to check the evil doings of the other 2 per cent. Were the Government to talk of limiting hospitals, schools or churches, what righteous indignation there would be! Yet we have heard of dishonesty, extravagance and bad management in such institutions.

Modern legislation does not attempt to make men better in intention but simply to raise barriers so that men may do the least possible harm. The business man is compelled to ask whether his acts are legal, whereas he should ask whether they are right, just and fair. My plan is for simple comprehensible publicity and reasonable freedom as the panacea for all evils.

FROM THE TOMB.

The Metropolitan Life has successfully resisted a policy loss claim under unusual conditions. Last July a man was found hanging to a tree in Weehawken. On hearing of the incident the wife of a man who had disappeared shortly before went to the

Morgue and as soon as she caught sight of the dead man's face she fainted. When she revived she identified the body as that of her husband. She was too poor to take charge of the body and it was buried in Potter's Field at the county's expense.

Soon afterward she tried to collect a policy on her husband's life issued by the Metropolitan, but the company refused to pay on the ground that the identification of the dead man had been insufficient.

A suit resulted in her being awarded \$500, but the company took an appeal, which is still pending.

While she and her eight children were eating dinner Tuesday the husband walked in.

JAMES A. WHITLOCK.

James A. Whitlock, who died on Monday, was born in New York city, where he spent his business life, in 1831. He started in business with the law firm of Moore & Havens, and Mr. Havens at his death named him as one of the trustees of his fortune. In 1855 he entered into partnership with Walter R. T. Jones, under the firm name of Jones & Whitlock, which continues as New York agents of the Insurance Company of North America, of Philadelphia. For many years he was secretary of the New York Board of Marine Underwriters.

MISSOURI SUPERINTENDENT ON PROMOTION LIES.

Superintendent Blake, of Missouri, in his annual report, announces the following as his program in relation to new companies, promoted by means of misrepresentations as to the use to be made of the surplus paid in:

My authority to dictate the method to be pursued in the organization of an insurance company has been challenged, and it has been said that until a license to do an insurance business is applied for the insurance superintendent has no jurisdiction over the company. I think not only is it my right but my duty to protect the citizens of Missouri, as far as I can do so, against any sort of deception practiced by insurance companies.

If the citizen has been misled into believing that all of the surplus moneys paid in by him will be on hand when the company begins an insurance business, I think I have the right also to assume that the money is intact, and feel that I would be justified in refusing to grant the company a license if an examination disclosed the fact that more than a reasonable sum had been paid out to promote the corporation without the consent of the stockholders. The question is both novel and interesting, and will, in all probability, receive a judicial determination during the coming year.

LIFE EXCHANGE IN A WRANGLE.

From present prospects the Insurance Exchange will come in for considerable discussion at the annual meeting of the American Life Convention at Des Moines, Iowa, in September. The executive committee of the convention has wrestled with the question and is still so far from an agreement that it is not unlikely there will be a majority and minority report presented at the meeting of the organization.

The Insurance Exchange is an organization of medical directors of a number of life companies, largely Western and Southern, whose purpose it is to exchange information among members. It was organized before the American Life Convention and one of its rules is that a company cannot become a member until it has at least \$2,000,000 of insurance in force. When the American Life Convention was organized, all the members of the Insurance Exchange with three or four exceptions became members of the new organization. A number of companies are members of the American Life Convention, which are too small to be eligible to membership in the medical organization under its rules, but which desire to become members. A number of the members of the convention would like to have the rules of the exchange amended so as to let in these small companies, but there are some that do not. The three or four companies which are in the exchange but not in the convention are also understood to be opposed to such a change in the rules. They desire that the two organizations be kept entirely distinct.

One man who is in a position to know expresses the opinion that if the exchange does not let in the smaller convention companies a new medical organization will be formed, to which these small companies will be eligible.

A GOOD MODEL FOR AMERICAN DEPARTMENTS.

Reports on examinations and investigations are filed with the president of the "Beirat" and kept strictly confidential. If any methods are discovered of which the department disapproves, the companies are ordered to change them. Reference may be made to these methods in the next annual report of the department, no mention being made of the name of the companies involved. The attitude of the department seems to be that so long as a company is permitted to continue in business, nothing would be gained by publishing anything which would, by impairing public confidence, make it difficult and more expensive for the company to do business.—From report of Messrs. Hughes and Woodward of New York Department on Supervision in Europe.

The adoption of a similar system of discreet silence in the United

States might result in the abolition of self-advertising tactics, which have so marked insurance and very especially life insurance examinations in this country. But that it would not be un-American and that it would be

DISCRETION THE BETTER PART OF VALOR?

Superintendent Hotchkiss, by yielding the point that the National Protective Legion may continue its five year dividend business and by abandoning the proposed amendment which would have prohibited it, has avoided further effectual opposition on the part of fraternal societies to the omnibus bill which brings them under closer supervision. The bill is now expected to pass.

IN NEW ENGLAND

INDEPENDENCE DAY.

Dr. D. D. Scannell, chairman of the "Saner Fourth" Committee of the Boston 1915 movement, has prepared a pamphlet, entitled "Our Annual Sacrifice," from which we extract the following particulars:

Loss of life from lockjaw, 1903-1909, 6 years.....	901
(Seventy-five per cent. resulted from blank cartridge wounds.)	
Loss of life from other Fourth of July causes	630
Total	1,531
From Fourth of July injuries—	
Loss of sight.....	115
Loss of one eye.....	518
Loss of legs, arms or hands..	406
Loss of fingers, one or more..	1,427
Other injuries	30,606
Total, non-fatal injuries.....	33,073
Total, dead or injured.....	34,603
As causes of above injuries—	
Blank cartridges	6,374
Fire crackers	10,781
Cannon crackers	2,880
Firearms	2,902
Powder and fireworks.....	10,540

The movement to celebrate the Fourth in a civilized manner has already yielded practical results in cities like Cleveland, Springfield and others, and as a big committee has taken hold of the matter of commemorating the day in Boston as it ought to be commemorated, the outlook is decidedly good for an improvement there. Also a bill to abolish the use of the toy pistol, the blank cartridge, the dynamite cracker and the other most dangerous playthings of Independence Day and other patriotic anniversaries, has made splendid progress in the legislature, and is practically certain of enactment.

Calls for Bonding of Subordinates.

In his annual report Elmer A. Stevens, State Treasurer and Receiver General of Massachusetts, calls attention to the fact that while he gives a bond of \$100,000, the condition of which is that all persons employed in his department shall faithfully discharge their duties, he has no authority to compel bonds from his subordinates. He recommends bonding his force, the expense to be borne by the State. Another point made by Mr. Stevens is that fraternal beneficiary corporations deposit with the State Treasurer the emergency fund in the form of securities, among them mortgages, but there is no authority to pass upon the value of these securities. The treasurer recommends that he Insurance Commissioner be empowered to

examine and certify to the value of the mortgages annually.

About New England Field Men.

H. B. Sly, special agent of the Continental and Fidelity Underwriters for Connecticut and Rhode Island, will become special agent for Eastern Massachusetts on June 1, succeeding Walter Adlard.

By the way, Friday, the 13th, has no terrors for Walter, as his formal election to the secretaryship of the Massachusetts Fire and Marine took place on that date, this month.

H. C. Buck, of Hartford, special agent of the Norwich Union, is slated for the position soon to be relinquished by Mr. Sly, as above.

H. H. Clutia, of Boston, special agent of the Dixie, has been appointed examiner at the home office of the Continental, assuming that position on July 1.

Enlarges Its Scope.

The New England Casualty Company, with \$200,000 paid up capital stock, has received its revised charter and now has the right to transact all forms of liability insurance, including automobile liability and automobile property damage. The New England Casualty is, therefore, the only casualty company incorporated under Massachusetts laws doing this class of business.

Webster B. Evans, for some years with the Employers Liability, has been appointed cashier at the home office of the New England Casualty.

New England Brevities.

No the Massachusetts Senate did not kill House bill 1554. In so stating last week the writer fell into grievous error, based on misinformation, and craves the indulgence of the readers of this column. On the contrary, the bill, which amends sections 32 and 34 of the insurance law in some important particulars and relates to the purposes for which insurance companies may be organized, has been signed by Governor Draper, and is a law on the statute books.

The smoke talk of the Boston Life Underwriters Association is to take place at the City Club, Friday afternoon, May 20, and "Business and Partnership Insurance" is to be the subject of discussion.

The Massachusetts legislative committee has voted to report next General Court on the incorporation of the New England Order of Owls. This follows quite a rumpus between the Massachusetts adherents of the order and the home nest at South Bend,

Ind., during which charges and re-crimination were freely banded. Hoot, mon!

"The Field Man's Greatest Opportunity" is the topic of an address which W. B. Medlicott, New England general agent of the Atlas, is scheduled to make before Insurance Society of New York next Tuesday.

At a meeting of the Boston Chamber of Commerce, Wednesday of last week, considerable criticism of the employers liability law was indulged in, and the enactment of a workmen's compensation act, to take its place, was favored.

Holyoke, Mass., business men are talking the project of organizing a mutual fire insurance company, because rates are too high. This, somehow, has a familiar sound, and you may notice that there seems to be no intention of risking any stock in what ought to be a profitable business "if rates are too high."

ANOTHER GOOD OPENING.

Frequent mention has been made of the scarcity of good field material in the West. At the present time the North America, Commonwealth, Liverpool & London & Globe and North British & Mercantile are each looking for from one to three field men for Western States, to say nothing of a dozen or so other vacancies, some of them just as desirable. Managers confess their inability fully to explain the situation or to deal with it satisfactorily. They hate to take the chances of trying out green men and they do not want to take on old men who they fear may soon become superannuated. Some of the union managers are fearful of taking men of non-union training lest they find they are unable to get business otherwise than by buying it with excess commissions. They state that some of the men who are qualified for field work object to traveling, and others have positions in city offices which are satisfactory to them.

It is probable that another difficulty arises through the change in the nature of field work which has taken place in the West in the past few years. The veterans can still hold most of their business and often increase it by the old methods, because they have a strong personal hold on the agents, but the young men have to adopt other methods. The day when a special agent can be a great success by being a good fellow and giving his agents a jolly is passing rapidly. The men who are making the records now are the ones who help their agents capture lines by knowing how to apply the schedules and secure lower rates for improvements. Comparatively few field men are in any sense masters of the schedules. Some count it beneath their dignity to help agents solicit business and some are lazy. Once they might have compensated for these disadvantages by being good fellows and taking the agents to dinner or a ball game, but those methods fail to deliver the goods now when competition is fierce and others have better methods and work fourteen hours a day, if necessary, to get their work done.

Most of the local agents who have proved their abilities as business getters have built up agencies which pay them more than their field positions would or give them independence and the privilege of staying at home. Most of the men with knowledge of the schedules are already in field positions or in the inspection bureaus, and the inspectors cannot always be secured or are not available for some reason. This leaves the bulk of the material

offering itself consisting of daily report examiners, many of whom are sent to the field, and not over successful local agents, whom the companies do not want in the field.

AN OPEN FIELD.

The Hartford Fire has left the ranks of the sole agency companies in Chicago by appointing Shipman & Wayne agents to write outside of the congested district. This action does not mark the Hartford as doing anything unusual, for it is only one of many that have gone upon a dual or multiple agency basis in the city. The pressure on managers to follow this course is severe. There are many active young offices in the city which have to broker a large amount of business through want of facilities to write it themselves. They have scoured the country for additional companies and apparently have induced all to enter Illinois that can be influenced, but the demand still continues far ahead of the supply.

DECIDES FOR NATIONAL OF CHICAGO.

Judge McPherson, of the Circuit Court of the United States for the Southern District of Iowa, has held for the company in the case of Watson vs. National Life of U. S. A. Watson attacked the reinsurance of the National Life and Trust, of Des Moines, in the National Life of U. S. A. The company, in its answer, denied all his allegations, which threw any discredit whatever on either company, or questioned the validity of the transfer.

Judge McPherson sustains the company in every contention and dismisses the case.

Ralph Bane, city treasurer of Santa Monica, Cal., is missing, with an unexplained shortage of \$17,000 in the city's funds. The Aetna Indemnity is on his bond for \$25,000.

AMALGAMATION OF INSURANCE COMPANIES.

(Continued from Page 5.)

the case of a company having capital stock. No salary, compensation or emolument shall be paid to any officer or trustee of any such company unless authorized by a vote of the directors, nor shall any salary, compensation or emolument amounting in any year to more than five thousand dollars be paid to any agent or employee unless the contract (if made after the passing of this act) under which such amount becomes payable has been approved by the board of directors.

56. No Canadian life insurance company shall make any agreement with any of its officers or trustees, to pay for any services, rendered or to be rendered, any salary, compensation or emolument extending beyond a period of five years from the date of such agreement.

57. No Canadian life insurance company shall make any contract with any director, trustee, officer, employee or servant of the company, save such agents as are employed to solicit insurance, to pay any compensation or reward whatever by way of commissions in respect of the business of the company or any portion thereof: Provided, however, that this subsection shall not apply to insurance personally solicited and secured outside of office hours by any employee or servant not being a director, trustee or officer of the company.

2. For the purpose of conducting the affairs of the company in the most efficient manner in the interests of the policyholders and shareholders, the directors may make by-laws providing for the creation of a staff pension fund, but such by-laws shall before becoming effective be submitted to and be approved of at an annual meeting of the company or at a special general meeting of the members thereof, notice of the intention to consider such by-laws having been in either case duly given.

Why No Merger Law Here?

In New York, notwithstanding that for nearly a score of years past the desirability of certain mergers has been apparent to everybody familiar with the conditions, the situation is very unsatisfactory.

In the first place, reinsurance and so-called transfer of risks is the only course which is open. This calls for the retirement of one of the companies, a complete loss of its identity and the general acceptance of the notion that it has failed. Nothing could be more galling nor more effectually block negotiations usually than this consideration.

Moreover, if as may be on other grounds desirable, or, indeed, unavoidable, the transfer is made from a larger to a smaller company, it may shake the business to pieces and certainly will cause heavier lapses. Few

people understand that the assets go with the business and make the smaller company larger by so much; whereas all would readily understand it, if it were an amalgamation or merger.

In New York, there is also the further hurdle that section 103, prohibiting the issuance by the same domestic company of both new participating and new non-participating policies, has been twice interpreted, once by the Attorney General to prohibit the reinsurance of policies which the company would have no right to issue and once by the counsel of the department the other way. It is said now that the superintendent would probably follow the opinion of the Attorney General—a serious matter since nearly every life company has in force policies of both kinds.

In the way of an amalgamation or merger statute, which would be genuinely effectual for all purposes, of course lies the ever-present difficulty that there are fifty or more States and Territories. But, subject to the approval of the superintendents of both States, interstate amalgamation could as well be countenanced, as interstate reinsurance.

AN EXCELLENT WORK.

Oscar Schmidt, assistant secretary of the German Fire, has prepared a manual on fire insurance practice, published by the Rough Notes Company, Indianapolis.

Out of his experience of years as instructor for agents, he has written this little guide for the agent not thoroughly skilled in the theory and practice of local agency work.

The author has made no attempt to present anything but a simple statement of working principles and elementary rules which should guide all local agents. Successively he has treated the problems of the agent as they arise in the routine of the ordinary fire insurance office.

No better book could be in the hands of the man who has not learned from experience the elementary principles of fire insurance—and much of the matter could be read with profit by those who have been in the business for many years. It will serve to guide the agent in the right way to guard the interests of his patrons without conflicting with the interests of the company—and this is always a delicate duty, because the agent acts both as trustee for the policyholder and as legal representative of the company.

"The fire losses in Minnesota for March were \$210,000, as compared with \$90,000 in 1909. The losses in the United States amounted to \$16,444,000 as compared with \$12,356,000 in March, 1909."—Commissioner Hartigan.

THE PENN MUTUAL LIFE INSURANCE COMPANY OF PHILADELPHIA

On January 1, 1909, rates were reduced and values increased to full 3% reserve.

A GREAT MEETING.

At the opening of the fifteenth annual convention of the National Association of Manufacturers, at the Waldorf-Astoria in this city on Monday, the subject of fire prevention was taken up, and American Manager Charles L. Case, of the London Assurance, made some remarks which are worthy of note, among which he said, concerning fire prevention:

Rates are now made on the so-called schedule plan, by which each risk is charged for its defects and credited with its good points. Every improvement in structure, equipment, fire extinguishing appliances, or occupancy that decreases the probability of a fire originating in the premises insured, or reducing the probability of a fire spreading, is duly credited in the making of the rate of premium. Any general improvement such as the recent high pressure system of water supply here in New York and Brooklyn is always followed by an equitable reduction in rates. One effective means of fire prevention the National Board has assisted at an expense of \$80,000 is sending 387 incendiaries to the penitentiaries of different States. By reducing the fire loss, we insurance companies can make more money for our shareholders—who require good dividends to leave their money in our risky business, and we can build up our reserves that we shall surely need to meet the next Baltimore or San Francisco incident—for these incidents recur, and must be provided for as much in the policyholders interest as in the shareholders. The increasing area of buildings, the increased height of buildings, the introduction of dangerous processes, the inadequately controlled electric hazard, and the fact that cities outgrow their fire protection, are operating to increase fire waste. Our loss ratio is still several times higher per person than that of any other country.

We desire to deal fairly with the public, not only to meet legal obligations, but to do all we can to safeguard property, and incidentally lives, against this preventable fire peril.

A NEW MOVE FOR "A MODEL BILL."

The following resolution was offered by Senator Gallinger at Washington on the 16th inst.:

Resolved, That the Committee on the District of Columbia be, and hereby is, authorized and directed, by subcommittee or otherwise, to prepare a code of laws for the regulation and control of insurance companies doing business within the District of Columbia; and for this purpose they are authorized to sit, by subcommittee or otherwise, during the session or recess of the Senate, to employ experts administer oaths, take testimony, send for persons and papers, employ a stenographer to report its hearings, and to have such hearings printed. Said committee shall

report the code prepared by them to the Senate. And all necessary expenses to carry out the provisions of this resolution shall be paid from the contingent fund of the Senate.

Meanwhile, what has become of the commission which was to have been appointed to study this subject?

N. Y. FIRE BOARD ELECTION.

The one most influential fire underwriting organization in America, the New York Board of Fire Underwriters, held its annual meeting on Monday and elected all the regular nominees of its committee, as follows:

President—William N. Kremer.

Vice-President—Henry W. Eaton.

Secretary and Treasurer—A. M. Thorburn.

Assistant Secretary—Curtis C. Wayland.

Assistant Treasurer—Wilbur F. Bingham.

Committees.

Finance—F. O. Affeld, Marshall S. Driggs, Charles A. Hull, John H. Kelly, Thomas A. Ralston, John M. Whiton, A. H. Wray.

Fire Patrol—George B. Edwards, M. J. Ennis, Howard Hampton, J. G. Illiard, E. E. Pearce, Charles H. Post, E. G. Snow.

Laws and Legislation—M. O. Brown, George W. Burchell, E. H. A. Correa, U. C. Crosby, Henry Evans, Harold Herrick, C. G. Smith.

Losses and Adjustments—Louis P. Bayard, Charles L. Case, J. Montgomery Hare, Harold Herrick, George W. Hoyt, Joseph McCord, W. L. Perrin, Wallace Reid, John M. Talbot, S. R. Weed, A. H. Wray.

Surveys—Frederick H. Crum, Howard Hampton, J. F. Hastings, Frank Lock, W. L. Perrin, C. F. Shallcross, F. H. Way.

Electricity—James A. Alexander, N. S. Bartow, R. C. Christopher, H. E. Hess, A. D. Irving, Jr., Joseph McCord, S. R. Weed.

THAT EXPENSE QUESTION.

Western managers of fire insurance companies are doing a lot of thinking on the question of expense these days, but they do not appear to succeed in reaching any conclusion with which they are satisfied. The Illinois Fire Insurance Commission held this week what will probably be its last public hearing, and part of its duties was to examine into the expense question. Only a few weeks ago the committee of insurance commissioners appointed for the same purpose held a meeting and hearing in Chicago. With these evidences of public interest in the question, come the probable dissolution of the Eastern Union and an increase in commissions in the East, and a prospect of increase in Southeastern Underwriters Association territory and announcement that the Pacific board has increased commissions on term business in cities of 200,000 population or over. This looks like a scorn of public opinion that is likely to be visited by vengeance.

One man whose field is large has been thinking on this question very seriously and endeavoring to reach a conclusion as to whether it is possible to reduce expenses through the instrumentality of a company organization. He can get no light. In the first place it is impossible to get all the companies together on anything, and if it were possible they would not stay together and all play fair for six months. The Western Union is probably the strongest and best of the organizations, yet nobody believes that all its members are even making a decent pretense of living up to its commission rules. There are managers outside of the union who have refused to join it ostensibly because its commission scale was higher than they approved, who yet are paying more than the graded scale when competition seems to make it necessary.

Men who have watched this game for years and who probably are sincere in their desire for lower commissions have practically no hope that a reduction will ever be brought about by the companies themselves. They see nothing for it but to worry along until the States take this question up and at least endeavor to settle it by legislation whether they succeed or not.

President Goddard Talks.

Of particular interest in connection with this subject is the talk contained in the address of President C. M. Goddard before the National Fire Protection Association at its fourteenth annual convention in Chicago yesterday, in which he quoted at length from the recent report of the United States

Geological Survey on the subject of fire prevention, and urged that laws be enacted requiring better construction and greater care on the part of property owners and said:

It hardly seems as though a year had elapsed since I had the pleasure of greeting you at our last meeting in New York city, but such is the case, and it now becomes my very pleasant duty to extend to you all in the name of the National Fire Protection Association a most cordial welcome and at the same time to express my earnest hope that you will join with us, not only in whatever work we may have before us at this our fourteenth annual meeting, but that we may have the benefit of your co-operation and effort throughout the days that intervene between our yearly gatherings. If we confine our interest and work to the two or three days we are assembled together and then when we separate cease our endeavors and forget our association for the remaining 362 days of the year, we shall accomplish but very little.

Work for the Future.

What we have done in the past has become a matter of record, and as the reports of our executive committee and secretary will bring to your attention the details of our work during the year now finished, it is my purpose in the few words I may say to you to look ahead and consider the vastness of the work which lies in the future; not that you may be discouraged by its immensity, but that rather you may be encouraged by the certainty of the results that will surely follow well-directed efforts, results which will not only benefit us but also those that come after us. Believing as I do that if the startling figures which portray our annual fire waste are kept prominently before the public the time will come when the lesson will strike home and produce results, I shall incorporate a few such figures in this address, even at the risk of repeating some facts mentioned last year.

Extracts from the recent Government Bulletin, entitled "The Fire Tax and Waste of Structural Materials in the United States," were read by Mr. Goddard, who added:

The results to the individual of this enormous fire waste are usually modified by insurance, so that the loss is spread over the whole country, but the loss is there just the same, and we are all paying our portion of it. Were it not for this equalization of loss through insurance we can hardly imagine the results of a conflagration like that of San Francisco, Baltimore or Chelsea to the immediate losers. Modern business could not be conducted along the present lines were it not for insurance, and it is worth our while to see that insurance does not become too dear to buy or too scarce to go around.

What the State Might Do.

The State might properly take steps to compel people to realize more fully that they owe as a duty to society and to each other the exercise of more care to prevent the occurrence of fires on their premises which always destroy property and frequently imperil

the lives and property of others. We are forbidden to expectorate in public places for fear of possible injury to others. Is it a far step to forbid by law the use of the parlor match, to which it is estimated that 600 lives are annually sacrificed, for fear that it may, as it frequently does, cause a fire that will destroy others' property and possibly their lives, or to enact other legislation which while it may interfere with some one's individual comfort or convenience, yet will prove beneficial to mankind as a whole and tend to conserve our created resources, thus relieving the country to some extent from the enormous drain of our fire waste?

No Marked Falling Off Expected.

We must not expect to see a marked falling off in our fire loss this year, nor next, and perhaps not for many years; the law of cause and effect is unchangeable, and we must yet pay the penalty of our past indifference and neglect. I do, however, firmly believe that our purpose is a worthy one, and that success in that purpose will be achieved just as soon as the people as a whole begin to comprehend the real facts and appreciate that it lies with them to apply the remedy. It seems to me that no better endorsement of the course pursued by this association in its efforts to reduce the fire waste can be secured than the conclusions given in the United States Government Bulletin, from which I have quoted. This report gives the following three an-

swers to the question "How to reduce fire losses":

First—"By tests and investigations made to determine the relative fire resistance of building materials * * * and by the development of systems of construction which will offer maximum resistance to fire."

This association has certainly, in conjunction with the Underwriters Laboratories, with which we are so closely connected, done a large amount of work along these very lines in the way of tests, and also through its various committees in the compilation of standards and requirements.

Second—"By the dissemination of information regarding the more non-inflammable building materials."

The hundreds of thousands of pamphlets distributed through the courtesy of one of the active members, the National Board of Fire Underwriters, containing information of the above character compiled by this association, show that we have always been extremely active along these lines, and, of course, one branch of our campaign of education work has been in the same direction.

Third—"By the enactment and enforcement of building codes with a view to insuring more fire-resistant and more nearly fireproof construction."

Here again we find that we have been following a similar course in giving publicity through the daily press to the question of fire protection and fire prevention, also in our contact with business men's associations and municipal governments, urging just such action as is recommended by the United States Government.

As the Credit Men View It.

Probably in no State at the present time are there so many business men discussing fire insurance problems as in Texas. Lately rates have gone high there because of excessive losses and men are beginning to see that cheaper rates can only come through lessened losses. Secretary McGown is endeavoring to take advantage of this general interest in the subject to get the members of the Fort Worth association to distribute among the retail trade the six leaflets entitled "Burning Subjects," prepared by the National Association so that the smaller as well as the larger business interests of the State will get an adequate idea of their fire problems.

* * * * *

When the business men of the country take a broad interest in the reduction of its enormous and disgraceful fire waste then, and not before, will appreciable progress be made. Our fire waste, itself a great economic problem, has to no small extent been the cause of the economic problems pressing upon us to-day and is now aggravating and intensifying them.

The National Association of Credit Men was one of the first business organizations to appreciate the responsibility resting upon business men in solving this fire waste problem and has had its fire insurance committee at work for several years determining how best to approach it. The conclusion has been that at the foundation of any permanent movement must be a public sentiment aroused by an intelligent understanding of the seri-

ousness of our annual losses by fire, and that this involves an understanding of the main points in insurance as well. Accordingly, the association has prepared, strictly from the business man's standpoint, a series of six leaflets each treating a salient feature of fire insurance and fire waste. They are in a style so simple and popular as to appeal to any man with ordinary business intelligence.

It now remains to secure the widest possible distribution of these leaflets, and every member of the association should gladly do his share, for there is none but has an interest in this important work. They are prepared for envelope enclosures. Members may have their imprint on the cover. As the leaflets are issued to members at cost, price varies somewhat, according to quantity ordered. Samples may be had by any member on application.—Credit Men's Bulletin.

AN APOLOGY.

In the last issue of "The Chronicle" was contained an article headed "When the Brain Gets Busy," prefaced by the following comment:

Improved methods of construction, protection and rating are dealt with by Arthur Hawkshurst, insurance manager for the big corporation of Marshall Field & Co., of Chicago, in testimony just given before the Illinois Fire Insurance Commission, of recent birth. Mr. Hawkshurst has made insurance in its varied forms, as applied to his corporation's commercial credits a specialty, therefore what he says has particular value.

It was purely an inadvertance that it was overlooked that this was supplementary testimony to that previously given before the Illinois Commission on Fire Expense and prepared at the request of and for the particular use of "Insurance Engineering," the leading fire insurance authority in America on the physical hazards of fire underwriting science.

A BUNGLED TRANSACTION.

The bitter quarrel between the United Surety Company of Baltimore and the Munich Reinsurance Company of Germany, provoked by the former, over the intent and purport of a reinsurance agreement, is to be carried to the highest courts.

The Maryland company has had a judgment for \$100,000 against the German company confirmed on appeal, but the case will now go to the United States Supreme Court.

United States Judge Lacombe has authorized the receivers of the Mutual Reserve Life Insurance Company to accept from the estate of Frederick A. Burnham, former president of the insurance company, \$5,000 in cash and 250 shares of the preferred stock of the Owl Commercial Company in settlement of all claims held by the company against the Burnham estate.

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.
Large surrender values.
Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in instalments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

NOWHERE.

A promise was made by "The Chronicle," to its readers a few weeks ago to let the awful excise law violations in New York go unnoticed. The only possible technical interest in the subject was from an insurance standpoint and had been fully presented. Just now, however, there comes news of import and it must be recognized.

Over that big excise department (located in the Albany suburb of this little city), there is Dr. Clement.

And now comes Dr. Clement, saying:

Although there has been a change for the better in the attitude of brewers and traffickers in liquors in respect to obedience to law, which has proved helpful in the work of the department, all of the agencies provided by the liquor tax law, assisted by such outside co-operation as is possible under existing conditions, are not sufficient to bring about such a radical betterment in the methods and practices of those engaged in the manufacture and sale of liquors as will meet the ever increasing public demands for excise reform.

While there is in the minds of many a deep seated prejudice against the liquor business, because of flagrant abuses and utter disregard of law by a certain class of dealers who have defied the authorities persistently since the formation of the State, to the serious injury of the business, liberal minded men are disposed to regard the liquor traffic, if decently conducted, substantially as they look upon any other lawful occupation; but no fair mind can consider the liquor traffic as superior to any other business, or better than any other business, or as entitled to any immunity or privilege not accorded to other trades.

Increase in Special Agent Force.

It is understood that the Committee of Fourteen of New York City, an organization which has given to this department, and to the local police department as well, intelligent and valuable assistance in the enforcement of the liquor tax law, and in the correction of abuses that exist in connection with the liquor traffic, will have re-introduced in the legislature this year its bill of last winter, with the Sunday opening provisions, which met with serious opposition, eliminated. The proposal looking to an increase in the special agent and working forces of this department, in order to extend and render more efficient the department's efforts to secure a greater degree of observance of the law on the part of those engaged in the liquor traffic, by giving the State Commissioner an adequate force to facilitate a more prompt investigation and a more vigorous prosecution of violators, accords without doubt with the best sentiment of the State; but in order to be entirely effective, a reform looking to a large increase in the department's ability to multiply the number of investigations, and to

a material increase in the number of civil actions to be prepared and prosecuted as the natural result of such increased investigations, should be comprehensive.

The Raines Law Demoralizing.

The Raines law hotel, so-called, has become synonymous with houses of ill fame, and responsible in the minds of many for every disorderly house, in spite of the fact that there is far less of the social evil flaunting itself in the eyes of decency than when the law was passed and in spite of the fact that the ten-room provision from which the Raines law hotel derives its name was taken almost word for word from the old excise law of 1892, and the decisions of the Supreme Court construing that act.

Sensation mongers and faddists have, through ignorance or a morbid desire for cheap notoriety, insulted the integrity and morality of the women of the cities and populous centers of the State, without justification or decency. * * * * *

It does not require much thought or reason to comprehend that so long as the number of retail places that are struggling to exist is largely in excess of the number that can be lawfully run at a profit within the restrictions laid down in the law, it is useless to expect obedience to the law on the part of those dealers who find competition so strong that from their viewpoint violations are necessary to make both ends meet.

Power to Make Liquor Traffic Law-Abiding in Hands of Dealers Themselves.

The liquor traffic can be made law-abiding absolutely, if intelligent and far-sighted dealers who see in the law-defying practices of flagrant violators the cause and provocation of the agitation that keeps the business continuously in an uncertain state, and threatens its ultimate destruction, will themselves demand of their competitors that excise violations shall cease. The business can be reformed within itself with the least harm and to the greatest advantage from the standpoint of the welfare of the liquor dealer. Reform from within means improvement, while from without it may mean destruction.

Liquor Interests Shortsighted.

The absence of reason and judgment, and a short-sighted policy of greed and selfishness on the part of the liquor interests, are responsible for a large proportion of the prejudice and agitation against the traffic. For instance, no business that ignores or defies law in the main can continue to do so except during the quiescent period of indifference and inattention on the part of the people, and yet certain dealers continue to break and defy law and to do everything in their power to outlaw the liquor business, thus placing it in a blacklisted class all by itself, and this without forceful or effective protest from the better class of liquor dealers. Then they all complain that men engaged in the liquor traffic are shown no consideration and are treated entirely differently from men conducting any other business. On the other hand, many

of the well-meaning class that is devoting a good deal of time to the reformation of excise conditions are working along emotional lines almost exclusively, and devoting their energies in efforts that make only temporary impressions on mature citizens of fixed habits, while they neglect, practically, the more fruitful field of a thorough education of the young in regard to the deleterious effect of alcohol on the human mind and body, and the disadvantage to which a young man is subjected who enters business life handicapped by habits of intemperance.

Reform Needed Along Practical Lines.

If reformers would accomplish good results they must be satisfied to become real workmen along practical lines. It is not enough that they be merely sayers of the word; they must become doers of the work proceeding along the pathway of reason and experience.

Lowell gives emphasis to this great truth to which exclusively oratorical reformers would do well to give heed:

"We have been compelled to see what was weak in democracy as well as what was strong. We have begun obscurely to recognize that things do not go of themselves, and that popular government is not in itself a panacea, is no better than any other form except as the virtue and wisdom of the people make it so, and that when men undertake to do their own kingship, they enter upon the dangers and responsibilities as well as the privileges of the function. Above all, it looks as if we were on the way to be persuaded that no government can be carried on by declamation."

In the discussion of the excise problem, I deem it of the highest importance that prominence and emphasis be given to the paramount responsibility of each citizen in popular government in the selection of public officials to represent him and for the continuous supervision of such officials, because eternally vigilant citizenship is truly the price of good government.

H. A. Robier, formerly with the North British & Mercantile, in New York State, becomes special agent for Maryland for the Continental.

A first class life underwriter with a successful field record, and an untarnished reputation can secure good open territory by addressing

SECURITY MUTUAL LIFE INSURANCE COMPANY

Binghamton, N. Y.

A WHIRLWIND HARVEST.

"As ye sow, so shall ye reap," was the biblical adage, also it is read in those covers that sowing the wind means to harvest a whirlwind.

Now floats in from the insurance department at Albany some pitifully interesting aftermath concerning the ejection from this State of the United Surety Company of Maryland. It is learned, from every other than sources under the seal of the State, that in addition to the cast-up of a balance sheet of the company by New York's methods, which makes a bookkeeping impairment of about \$90,000, which necessitates a reduction of capital to \$250,000, there are now forfeitures in the excise department of New York approximating \$100,000, and claims pending to an equal amount, making a total of \$200,000 penalty which the company may suffer because of its ill advised and foolish alliance with the criminal liquor selling elements of New York.

The company may be rescued, but it is a job for a Hercules or an Atlas. Every effort at reinsurance has failed. A Napoleon is wanted and maybe Bowles will measure up. He has done good work hitherto.

Certain it is that the predicament in which the United now finds itself, as a result of headstrong "butting-in" on a played-out shell game, long since abandoned by the gray-heads, will prove a warning to the coming stranger, unless he be from Pittsburgh, Chicago or some other tainted atmosphere of recent political exposure.

FOOD FOR THOUGHT.

There are canals and canals. There are also contractors who build canals. There are also surety companies who bond the contractors who build canals—sometimes. Of all the hazardous underwritings of surety companies canal building is the furthestmost limit. It all depends upon whether the contractor is a tin-horn gambler with a politician at his elbow, or whether he actually knows his job. This merely by way of introduction.

Panama's big ditch has occupied the public attention for so long that it has obscured New York State's undertaking along the line of canal building. Just that modest barge canal up the State on which about twenty millions have already been expended in construction alone will totally eclipse the Panama undertaking as

to titanic engineering comparison. There is also another work under way by this city in the way of a water supply that will eventually eclipse both the New York State and Panama canals. Of these little is heard outside this city, except in Albany politics.

The State's canal work has been handled in a way that has not rounded to public credit thus far but Uncle Sam is not entirely free on his Panama undertaking in that respect. Therefore it is probably just as well to refrain from comparisons further than to draw attention to the varying varieties of politics and peoples. The subject is in the limelight at the moment because New York city is preparing to spend a few hundred millions on new subways and there is likely to be some grafting in the process of awarding the contracts—and afterward. It is possible, but not probable, that any one of the bonding companies is not fully informed as to the changed political conditions, and will be governed accordingly.

It may be recalled that when the "copper war" was on in Montana about five years ago it became necessary for one of the leading contestants to file a bond for half a million or some figure near that. He was a reputed multi-millionaire, but singularly enough no surety company would, or could, come to his relief. Resourceful, he simply created a dummy surety company of his own, under the freak corporation laws of some lax State, and had sufficient political or other pull to have it approved as surety on the required bond.

This is merely to suggest that there are many varieties of players in the great game of poker "bluff," just now so prevalent in surety circles, both on the Atlantic and Pacific edges.

OVERWORKING A JOKE.

It has been seriously stated by some sober-minded people that some of the lawyers of Seattle, Wash., have been moving for a law to require all future entrants of their fertile field to give a bond for not less than "\$5,000 guaranteeing their honesty." It is also stated that such a law has been formulated into a bill and presented to some town council.

Just what moral effect it might have on the fraternity of the future would be just like asking the age of Ann, or who first started comic doings. But the laugh is occasioned over the question as to what underwriter or company would sign such a wide-open and indeterminate bond.

OLD SCORES AND SORES.

Not all the plate glass companies have signed the local agreement at Chicago yet, and some that so far have declined to do so show no present signs of changing their position. There are some old scores that have not been settled yet, and there are a few companies that fail to see what advantage it is to them to sign away their rights to cut a rate if they see fit. The manager of one company whose business is small and whose home office has given him no encouragement to join the compact admits that it is a fine thing for some of the larger companies, which under a compact would have no trouble in holding their present business, but he fails to see what show a young company in the field would have to build up a volume of business. On the other hand, some of those who are least enthusiastic about compacts in general are managers who now control a large volume of business and are making money for their companies every year without any agreement.

GETTING AHEAD.

"The progress of the Michigan State Life for the four months of 1910 was very gratifying. The income for the four months was 53 per cent. in excess of that for the same period during 1909. Notwithstanding this large increase in income the disbursements during the four months were 1 per cent. less than those for the first four months of last year," says one of the officers.

"The company is writing an increasing volume of business, the business of March, 1910, exceeding that of March, 1909, by 47 per cent., while the business of April, 1910, exceeded that of April, 1909, by 62 per cent.

"The agency force is increasing to such an extent that the new business for 1910 may confidently be expected to exceed that of 1909 by at least 50 per cent.

"The company has had only one death loss during 1910 for \$1,000, the only one since last July."

The Minnesota Insurance Department bulletin (No. 32) announces that the "Supreme Tribe of Ben Hur," one of the younger assessment concerns, will not be relicensed in that State, but no reason is given.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.

Curtate Summations of D Column.

Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:

Divide temporary insurance values by immediate temporary annuities.

Computing Annual Endowment Insurance Premiums:

Divide endowment insurance values by immediate temporary annuities.

Computing Annual Pure Endowment Premiums:

Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.

By these means, the net extra premium for a special guaranty can be quickly and accurately computed.

Computing Annual Semi or Double Endowment Premiums:

Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.

Computing Limited Premiums:

Divide the proper single premiums by immediate temporary annuity.

Computing Surrender Values:

Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.

Extended Insurance with Fractional Paid-up Endowment:

Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.

Computing Terminal Reserves:

Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.

Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.

Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.

Warranted Commissions for New Business.

Surrender Values.

Dividends.

For these purposes the "select and ultimate" will be most useful.

Meeting of the Actuarial Society.

The May meeting of the Actuarial Society of America convened at the Hotel Astor on Thursday of last week, Vice-President A. H. Welch in the chair, owing to the illness of President John K. Gore.

Of all the subjects under consideration the new Medico-Actuarial Mortality Investigation, now being undertaken under the joint supervision of committees of the Actuarial Society and of the Medical Directors' Association naturally came in for the most attention. The discussion of the proposed "Rules and Instructions," a copy of which was supplied each member, was made a special order for Friday; and on Thursday two papers upon the use of perforated cards were read, each being very evidently called forth by the investigation, viz:

The Hollerith Machine Method.

Method of Making Mortality Investigations by Means of Perforated Cards, Sorting and Tabulating Machines, with Special Reference to the Medico-Actuarial Mortality Investigation—Arthur Hunter, actuary of the New York Life.

"Some Uses for the Hollerith Machines"—Henry N. Kaufman, assistant actuary of the Phoenix Mutual Life.

Mr. Kaufman says that "as a rule the punching can be done about seven times as fast as writing," i. e., at the rate of from 2,000 to 3,000 a day as compared with 300 to 400. He also says that sorting can be done, "one column at a time, at a speed of from 250 to 270 per minute." The counting is done by a tabulating machine operating also very rapidly.

Mr. Kaufman's paper omits a de-

scription of the use of these machines in mortality investigations and devotes himself to showing how they may be employed for office and book-keeping purposes. The following sample cards are given, with full explanations:

New Business Card.
Dividend Card.
Dividend Addition Card.
Seriatim Valuation Card.
Deferred Premium Card.
Policy Loan Card.

Mr. Hunter's paper deals with the methods of punching cards, sorting and tabulating which the joint committee will use in the investigation.

What the Joint Committee Will Investigate.

The joint committee will investigate:

1. Standard weights and heights.
2. Mortality of lives of various "builds," i. e., of "standards," "overweights" and "underweights."
3. Mortality in each of 76 different sorts of "Medical Impairment," including "family history."
4. Mortality in each of 68 different occupations.

Information is also sought as to 23 other medical impairments and 40 other occupations, which are not at present to be investigated.

Information is also sought as to residence; but, except as to a "malaria" group of impairments, no immediate use of the same is contemplated.

Causes of death are also to be investigated.

The entire investigation is supplementary to the "Specialized Mortality Investigation" of several years ago.

The Travelers Experience.

"Life Experience of the Travelers

Insurance Company," as bearing upon the effects of residence upon the mortality, the following from "Life Experience of the Travelers Insurance Company," read by H. J. Messenger, is interesting:

A study of the Travelers experience with special reference to the general improvement in the mortality rate in connection with the results in different sections of the country convinces me that insisting upon the urinalysis and inspection report and a competent medical examiner and an agent who realizes that in the long run it is against his own interest to work off a bad risk on the company has much more to do with the determination of the mortality rate than climatic or sanitary conditions. This is the only way in which I can explain the fact that the Travelers experience, issue of 1866 to 1904 inclusive, risk of 1897 to 1904 inclusive, showed a mortality rate in Louisiana of 83 by numbers and 93 by amounts; in Alabama 93 by numbers and 92 by amounts; in North Carolina 83 by numbers and 82 by amounts; while in Georgia the mortality rate was 111 by numbers and 131 by amounts—and most of our Georgia business was obtained from Atlanta and vicinity, which from a climatic and sanitary standpoint, was supposed to be the most desirable part of the State.

Mr. Messenger furnishes twenty-three instructive tables, deduced from the company's experience and illustrating various phases of it. Some of the most interesting facts brought out are:

Range of the Mortality.

The annual mortality, by numbers, has varied in the last twelve years from a minimum of 69.2 per cent. of the expected by the American experience tables to 83.9 per cent. and, by amounts, from 69.1 per cent. to 96.5 per cent.—a range wide enough, despite the large volume of business, to

indicate the perils surrounding a young and small company.

For the 43 years, 1866 to 1908, inclusive, the experience, by numbers, has been 76.2 per cent., and, by amounts, 82 per cent. The largest in the company's history, by numbers, was 1883, 100.8 per cent.; but, by amounts, there has been an excess in 14 different years, the last being 1893.

Arranged on a Select Basis.

The table, giving the mortality by years of exposure, shows lower mortality, by numbers, until the 19th year, and, by amounts, until the 13th year. In view of the "select and ultimate" ratios of mortality salvage, assumed in sections 84 and 97 of the insurance laws of New York, the following is interesting:

Year of Exposure.	Travelers' Experience By Numbers.	Experience By Amounts.	Select and Ultimate.
1	.401	.369	.500
2	.556	.531	.650
3	.607	.741	.750
4	.689	.668	.850
5	.668	.719	.950
6	.664	.641	1.000
7	.820	.918	1.000
8	.865	.950	1.000
9	.769	.758	1.000
10	.748	.788	1.000

The following ratios by five-year periods are also instructive:

Age at Issuc.	Travelers' Experience.				By Amounts.			
	By Numbers.							
	1-5 Yrs.	6-10 Yrs.	11-15 Yrs.		1-5 Yrs.	6-10 Yrs.	11-15 Yrs.	
Under 20	.481	.450	1.000		.503	.472	1.536	
20-24	.460	.699	.457		.483	.954	.422	
25-29	.509	.554	.612		.526	.610	.738	
30-34	.471	.589	.629		.390	.624	.655	
35-39	.510	.698	.810		.484	.847	1.129	
40-44	.550	.793	.919		.638	.796	1.226	
45-49	.748	.839	1.054		.780	.714	1.097	
50-54	.905	.984	1.033		.878	.927	.926	
55-59	.853	1.211	1.033		.825	1.146	.988	
60-64	.953	.978	1.073		.796	.845	.868	
65-69	.571	.739	.667		.991	.872	.536	
All Ages	.593	.771	.825		.621	.809	.963	

Defect of American Experience Table Shown.

Mr. Messenger remarks "that these tables clearly shows that there is very little gain from mortality on a risk after it has attained age 50, whatever the age at issue." In other words, the well-known defect of the American Experience table as representing the mortality between age 50 and age 70 is again shown; which fact so shown no doubt, largely accounts for Mr. Messenger's reading at the meeting a statement that the officers of the Travelers are of the opinion that steps should be taken to enable an investigation of standard, as well as of specialized, mortality.

Mr. Messenger finds that "the mortality gains are almost wholly in the first ten years and that eliminating the first ten years of exposure the resulting mortality rate is about 88

per cent. by numbers and about 98 by amounts."

Reinstatement of Impaired Risks.

Henry Moir read a paper on "Reinstatement of Policy on Impaired Risk Holding Extended Term Insurance," in which the problem is put thus:

If a policy on an impaired risk were reinstated in exactly the form previously held, the insured would be enabled to carry the insurance for a year or two and then take extended insurance for a longer term. This means that under the guise of reinstatement the insured could get a longer term of protection at the cheapest rates. On the theory that the company must be protected this leads to the conclusion that all applications for reinstatement by impaired risks with only a short term to run should be at least modified by excluding the extension feature from the reinstated policy.

The following kinds of impairment are instanced:

(1) The cause of impairment may involve an immediate risk which is not likely to become greater or less with advancing years.

(2) In case the insured may have adopted a hazardous occupation the immediate risk may be constant, but there may be a likelihood of retirement from the occupation; and the question of reinstatement would de-

pend chiefly upon the period of extension.

(3) The insured may have very recently undergone an operation like that for appendicitis—there may still be considerable risk, yet if he survives a year he is likely to be in as good health as any average applicant. In such circumstances, even if the extension period were brief, the reinstatement would be permitted.

(4) In other cases the impairment is likely to be of an increasing nature with advancing years, such as an attack of gout, a slight heart murmur, or a tendency to obesity; in such cases I would suppose that even if the period of unexpired extension covered several years a reinstatement of the policy would be avoided.

(5) Then again we may have a hump in the mortality curve, the most familiar instance of which occurs in female mortality between the ages of 40 and 50. After the period of impairment is passed, the life is actually better than the average life of the attained age.

Valuable Footnote on Individual Reserves.

Mr. Moir's method consists in comparing the true value of the extended insurance upon the impaired life with the true reserve upon reinstated policy, which he calls the "available value," and concerning which he appends the following valuable footnote concerning individual reserves:

It has been suggested that the "amount available" from the existing term extension cannot exceed the reserve; but this theory only holds from the narrow viewpoint of reserve being a fixed mathematical quantity. In the absence of more exact knowledge the reserve is the mathematical quantity which in the case of a whole life policy we represent by avx ; but with more exact information the true reserves become greater or less, according to the impairment of one life, or the vitality of another. So long as we do not know that a man is dead we carry the average reserve avx ; but immediately we learn of the death we treat the sum impaired as the liability. In like manner when we know for certain that a life is impaired, the true reserve changes to that indicated above.

"The Rate of Cessation and Valuation of Renewal Commissions."

P. C. H. Papps, actuary of the Mutual Benefit Life Insurance Company, read a paper, discussing the application of rates of cessation in the commutation of renewal commissions. For this purpose he investigated the rate of cessation, from all causes, in the Mutual Benefit, of policies issued from 1895 to 1907, inclusive, during the years 1903 to 1907. The following are the ungraduated rates of cessation:

Year.	Rate.
0	.157851
1	.074407
2	.056562
3	.036760
4	.026241
5	.025249
6	.022165
7	.017347
8	.014713
9	.014039

Values at 5 Per Cent.

The following table, computed at 5

SPECIAL OPPORTUNITIES offered now in Southern States to Representatives of

**CITIZENS
LIFE
INSURANCE
CO.**

W. H. GREGORY,
President.

per cent. interest, represents the adjusted present values, by these rates of cessation, of a renewal commission of one dollar per annum, payable originally for a term of from one to nine years, with from one to nine years to run:

Term of Renewals.									
Years To Run.	9 Yrs.	8 Yrs.	7 Yrs.	6 Yrs.	5 Yrs.	4 Yrs.	3 Yrs.	2 Yrs.	1 Yr.
9	\$5.8175								
8	5.5995	\$5.3371							
7	5.2193	5.0545	\$4.8256						
6	4.7043	4.6140	4.4741	\$4.2800					
5	4.0887	4.0428	3.9604	3.8553	\$3.6971				
4	3.3959	3.3731	3.3383	3.2820	3.1940	\$3.0727			
3	2.6377	2.6205	2.6110	2.5870	2.5476	2.4857	\$2.4014		
2	1.8184	1.8136	1.8072	1.7984	1.7843	1.7608	1.7241	\$1.6752	
1	.9390	.9378	.9359	.9335	.9301	.9245	.9150	.9003	\$.8815

Compared with Other Rates of Cessation.

These, of course, are present values at the beginning of the year. Mr. Papps gives warning that rates of cessation may be widely different in different periods and also that they differ widely in different companies, so that the usefulness of these ratios and values is necessarily restricted. He compares various rates of cessation after the year of issue as follows:

Mutual Benefit. Policy Year Experiences. Calendar Year Experiences.

During Policy Year.	% Ungraduated.	% Graduated.	% Canada Life.	% Conn. Mutual.	OM %	% Mutual Life.	% 30 American Offices.	% A. M. P. (1888).	HM %
1	7.44	7.44	14.53	15.42	7.16	10.45	18.77	13.91	7.43
2	5.66	5.46	7.04	10.46	5.45	7.40	11.11	4.56	5.62
3	3.68	3.93	5.29	8.93	4.44	5.52	9.24	2.93	5.05
4	2.62	2.93	3.80	8.17	3.72	4.62	7.90	2.97	4.41
5	2.52	2.34	4.28	6.59	3.35	4.20	7.10	2.97	4.08
6	2.22	1.98	3.55	5.65	3.12	3.58	6.10	3.01	3.68
7	1.73	1.73	3.33	5.30	2.93	4.80	6.50	2.99	4.97
8	1.47	1.53	2.97	4.74	2.80	3.08	4.63	2.83	3.26
9	1.40	1.40	2.42	4.38	2.65	3.18	4.09	2.78	3.01

And adds the following:

This table is self-explanatory, and in view of the comparisons there shown, it seems well to repeat the warning given at the commencement of this paper, namely, that when called upon to ascertain the commuted value of renewal commissions, great care should be taken to use a rate of cessation which is likely to be experienced in the future. The annuity values shown in Table H should not, therefore, be used unless it may be fairly assumed that the rates of cessation likely to be experienced will be not in excess of those experienced by the Mutual Benefit in the years 1903 to 1907. It is not to be understood that the values given are those which are necessarily used by the Mutual Benefit. They serve only as a basis, and are to be modified for individual cases.

"Total and Permanent Disability Provision in Connection with Life Insurance Plans."

Franklin B. Mead, actuary of the Michigan State Life Insurance Com-

pany, of Detroit, whose valuable paper on provisions for total and permanent disability, read before the American Life Convention in 1909, was extensively reviewed in "The Chronicle," contributed a paper on the same sub-

ject, which will be given liberal space in next week's "Chronicle."

INSURANCE FRAUDS CHARGED.

Under the above caption the daily press of the 24th inst., states that fifty witnesses from various sections of the State of Illinois have been summoned to appear before a Rock Island County Grand Jury for the 26th inst. to

prominence of the men involved are certain to make the revelations of national importance," the result will be awaited with interest, inasmuch as Mr. Magill promises to probe the matter to the bottom and says "that political influence will be of no avail."

VOORHEES INDICTMENT DISMISSED.

The remarkable indictments, on the ground of perjury, found by the Grand Jury under the administration of former District Attorney Jerome against Hon. Foster M. Voorhees, former governor of New Jersey, and Frank T. Combes, for statements made as president and secretary, respectively, of the Bankers Life Insurance Company, of New York, were dismissed by Supreme Court Justice Fitzgerald on Tuesday of this week, at the request of District Attorney Whitman.

These indictments were found on the ground that the annual statements of the company for several years were false, in that certain items of surplus, kept in open account according to the terms of the policies, should have been charged as a liability instead of as surplus.

T	H	E
PROVIDENT		
LIFE AND TRUST COMPANY		
OF PHILADELPHIA		
Insurance in Force, \$214,509,255.00 (Paid for Basis)		
Assets \$70,514,350.45 (Market Value, Dec. 31, 1909)		
Contingency Reserve . \$9,207,276.38 (Inclusive of Capital Stock, \$1,000,000.)		
The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.		

give testimony relative to the affairs of several fraternal insurance companies. Two are named, the Fraternal Tribunes, of Rock Island, and the American Home Circle, of Springfield, Ill. The former company recently has quit the insurance field. The methods employed, if correctly reported, are rather crude and very bold; it being charged that death claims have been twice paid, once to the rightful payee and again to a ring of officials, who so controlled affairs that such transactions might be possible. The amount involved is said to be upwards of \$200,000. It is also claimed that several politicians, well known thereabouts, and one Federal official are involved in the deal. No names are given.

As U. S. Attorney Magill, of Rock Island County, says: "That the frauds to be there disclosed and the

THE UNION CENTRAL FINDINGS.

On May 17, 1910, the Circuit Court of Hamilton County made its findings of fact and conclusions of law in relation to the suit of Attorney General vs. Union Central, for the cancellation of the \$400,000 of stock dividends declared by that company on June 16, 1908, the issues regarding which the court had decided some weeks ago, handing down an opinion, the principal points of which were fully set forth in "The Chronicle" at that time. The entry of these findings of fact and conclusions of law and judgment is necessary in order to perfect the record for an appeal which has been taken by the Attorney General.

The facts found are the following:

First—The incorporation of the company, and the adoption of by-laws, among which latter were the provisions that the capital authorized of \$500,000 should be limited to \$100,000 "until otherwise voted by the majority of the holders of the stock," the provision for a semi-annual dividend at 5 per cent, and that "the only other dividends that may be made to stockholders shall consist of the profit derived from policies issued without profits to the policyholders."

As to Representations Made.

Second—That it was sometimes represented by companies, officers and agents, including its president and secretary, to "prospective policyholders that the surplus fund was a fund for the benefit of its policyholders," and also to insurance superintendents and commissioners that "said fund was a fund for the benefit of policyholders," and that some of these representations were made only as a matter of individual opinion touching the legal rights of policyholders, while the most of them were made as existing facts; that no other statements were made regarding the matter and "that no action was ever taken by the stockholders or directors of defendant, authorizing, approving or repudiating such representations," while all the participating policies provided that they were entitled to receive "an equitable proportion of the surplus as apportioned by the company."

More Than \$400,000 Derived From Non-Participating.

Third—That up to January 1, 1908, the company "made no separation of its receipts and expenditures, profits and losses as they pertained to participating and non-participating policies," and that on December 31, 1907, the company possessed a surplus of \$2,422,184.25, "of which a sum largely

in excess of \$400,000 was derived from non-participating policies."

Fourth—"The surplus derived from the non-participating business of the defendant for the years 1908 and 1909 was in excess of \$400,000."

Fifth—The provisions relative to the issue of the new stock and the declaration of the dividend be applied to the purchase of the same.

Sixth—That the company declared dividends to participating policyholders without having any special surplus set aside for the benefit of the participating policyholders, or any other surplus whatever than the general surplus contributed to by both participating and non-participating policyholders, and that the same was true concerning dividends to stockholders, and that no dividends to stockholders were paid prior to June 16, 1908, "other than the semi-annual dividends of 5 per cent. specified in the by-laws of the corporation."

Seventh—That the new certificates of stock were issued as fully paid for "and held in trust for the benefit of the stockholders pro rata," and "that the said stockholders have been credited on the books of the company with dividends so issued at the rate of 5 per cent. semi-annually."

Conclusions of Law.

The following are the conclusions of law:

1. That said issue of \$400,000 of capital stock was lawful.
2. That the defendant was entitled to apply towards the payment of said stock \$400,000 out of the surplus on hand on December 31, 1907, theretofore derived from non-participating business.
3. That the defendant is not estopped from issuing said stock and applying said surplus from non-participating business in payment thereof.
4. The relator is not entitled to the relief prayed.

To all of which the relator excepts. Doubtless the Attorney General, upon appeal, will endeavor to have a review of the correctness of some

of these findings of fact which have been earnestly disputed by him, as well as by some of the conclusions of law.

It is to be observed that the conclusions of law do not go so far by any means as to the opinion of the court, filed at the time the court decided in favor of the company, but stopped short at holding that the company was "entitled to apply toward the payment of said stock \$400,000 out of the surplus on hand on December 31, 1907, theretofore derived from non-participating business"; whereas the opinion filed by the court seemed to indicate that the court was ready to find that the entire surplus of \$2,422,184.25 was the property of the company, and that the restrictions upon the use of the entire surplus to pay dividends to stockholders were void.

INDUSTRIAL INVESTIGATION INSISTED UPON.

The "graft investigation" bill, which has passed the Assembly, calls for investigating industrial insurance, as well as branches of insurance other than life. The Superintendent of Insurance, who has ample powers to make this investigation, and who recently showed his capacity for inquisition, had asked for a special appropriation of \$10,000, wherewith to make it, which request has been ignored. Instead, this was proposed to be added to the duties of a committee, already greatly overburdened with a general "graft" inquiry and impeded by unprecedented requirements of proceeding only upon formal charges, permitting all persons accused to be represented by counsel and listening to evidence adduced in rebuttal.

How It Looked to Governor Hughes.

Rightly or wrongly, Governor Hughes, Superintendent Hotchkiss and Senator Hinman appear to have come to the conclusion that the same was an ingenious attempt to sidetrack an effectual investigation of industrial insurance. Consequently Senator Hinman has insisted that this portion of the resolution be eliminated. For this, a certain newspaper agency has been circulating such stuff as the following:

Legislators are wondering what mysterious hold the Metropolitan Life and other industrial companies throughout the State have on Governor Hughes and his two leading satellites, Superintendent of Insurance William H. Hotchkiss and Senator Harvey D. Hinman.

From the beginning of his career as an insurance inquisitor, Governor Hughes has protected the industrial companies. As attorney for the Armstrong Insurance Committee, Charles E. Hughes declined to investigate the Metropolitan Life.

Hotchkiss, since he took office, has made an especial pet of industrial insurance, and has let those companies conspicuously alone while he exposed the graft and corruption in other branches.

Senator Hinman on the Bunco Game.

Senator Hinman accordingly rose in the Senate on Thursday of last week to a question of personal privilege, and, after saying that he favors real investigation of industrial insurance, affirmed that it would be impossible under this resolution, calling among other things for considering only charges "verified upon knowledge." Concerning such he said:

A member of the Senate not long ago verified a charge against another member on knowledge, and as a result was compelled to resign from the Senate. It is unlikely that this will prove an incentive to others to follow his

example. Knowledge of a corrupt act generally implies complicity.

His further remarks called a furore, especially the following:

The real story is this. A whole lot of stuff has been thrown in here as a subterfuge to blind the people. There is not a thing in the resolution that hasn't been monkeyed with. The whole thing bears the earmarks of fraudulent intent, and when I protest I am charged with conspiring with Governor Hughes and the Insurance Superintendent to protect an insurance company. I cannot permit this thing to go unanswered.

Passed Triumphantly, Notwithstanding.

The measure without the amendments has been passed by both houses, notwithstanding "The Chronicle" guesses that, when Governor Hughes' veto message shows up the fake, some legislators will be sorry they were born.

INSURANCE COURSES URGED.

The Association of Insurance Societies and Institutes, formed of delegates from the various societies and institutes throughout the country, held its first annual meeting in New York on Tuesday of this week, addresses being delivered by E. A. Law, of the Fire Insurance Society of Philadelphia; Herbert Folger, of the Fire Underwriters Association of the Pacific; E. R. Hardy, of the Insurance Society of New York; Louis A. Tanner, of the Fire Insurance Club of Chicago; D. N. Handy, of the Insurance Library Association of Boston, and L. N. Denniston, of the Insurance Institute of Hartford.

The paper by E. R. Hardy urged the establishment of courses on insurance, the same to cover at least three years, the first year to be devoted to mathematics, drawing, physics and chemistry; the second to physics, chemistry, mechanical drawing and accounting, and the third to physics, mechanical drawing and accounting, with a special reference

to the use of standard engineers' pocketbooks and technical insurance training. The physics, chemistry and engineering courses are upon fire-proofing, fire resistance and fire prevention, chiefly.

The suggestion was considered at this meeting, also, as to whether selected papers from those which have been represented during the year from the various societies and institutes should not be published in an annual volume, but no announcement was made.

THE BLUFF OF LIBEL SUITS.

The libel and damage suit of E. J. Summerhays against the "Western Underwriter" and Managing Editor Cartwright, has been dismissed by stipulation. This must not be interpreted as a confession on the part of Mr. Summerhays that he was not damaged or that he is in no immediate need of Mr. Cartwright's money. Neither can it be called a vindication of the "Western Underwriter" and Mr. Cartwright. In fact it proves nothing unless it be the evils of procrastination. Mr. Summerhays neglected to press his suit until it was too late for he is now in jail at Leavenworth, Kan., and Cartwright refused to wait.—The "Adjuster."

THE THINGS OF REAL INTEREST.

The Truly Important Portions of the Mutual Life Examination.

The Mutual Life Insurance Company, of New York, has printed the full report of the examiners of the New York Insurance Department, including Superintendent Hotchkiss' "publicity statement," and has sent it out, broadcast, with a very brief statement, concerning the three things, about which it was criticized, that pretty well demolishes every trace of them, if, indeed, they ever seemed to have any merit.

The important things, which a perusal of the report discloses, were mostly overlooked by the superintendent, in his publicity statement, as for instance:

Treating Old Policyholders Fairly.

The company began making loans to policyholders of every class at the time that it began to issue policies containing loan values, thereby extending the loan privilege to previous policyholders. They were granted on a basis of a cash surrender value at the due date of the note which, as a rule, corresponds with the due date of the next annual premium. Five per cent. interest is charged in all cases, generally payable in advance.

Fair to Deferred Dividend Policyholders.

In computing the deferred dividends, the company first accumulates the annual dividends which existing deferred dividend policies would have received in the various years of the dividend period, if they had been annual dividend policies. These accumulations are increased each year to the end of the dividend period at the various rates of interest used by the company in ascertaining its annual dividends. Second, the company accumulates at interest the annual dividends, which would have been allotted to deferred dividend policies had they been annual dividend contracts, which have terminated during their dividend period by death, surrender or lapse in the same way as in the first case. Two funds are therefore accumulated for the policies issued each year, known as accumulated annual dividend fund and the foreborne dividend fund. The first fund is distributed among the policies in accordance with their respective accumulations. The second, or foreborne fund, is distributed among the surviving policies in accordance with the risks of lapse and death for which they should be compensated. The risk of forfeiture by surrender of lapse is compensated for by using a constant factor applied to each policy's accumulated annual dividends. The risk of forfeiture by death is compensated for by a factor varying with the tabular mortality. The factors for the years 1906 to 1909 inclusive on twenty-year distribution policies, paying not less than twenty premiums, given in percentage of the accumulated annual dividends, are as follows;

the variable factor being given for ages 25 and 55:

Year.	Constant Factor.		Variable Factors.	
	Factor.	Age 25.	Age 55.	
1906...	25%	8.4672%	46.8018%	
1907...	20%	10.3488%	57.2022%	
1908...	19%	8.4672%	46.8018%	
1909...	21%	8.4672%	46.8018%	

We are satisfied that the method is fair as between policyholders.

Important Decreases of Outgo.

The following statements are also taken from the report:

Year.	Expenses.	Salaries.	Legal.	Legislative.	Supplies.
1904.....	\$15,720,901	\$1,469,033	\$284,280		\$601,101
1905.....	14,370,440	1,542,609	228,188		503,509
1906.....	9,930,252	1,265,318	100,196	\$21,027	144,866
1907.....	7,783,868	1,200,790	185,517	23,814	175,517
1908.....	7,451,187	1,195,943	69,313	7,614	150,099

Showing Decreases in Commission Rates.

Year.	First Year.	Renewal.
1904.....	71.49	3.84
1905.....	71.49	3.31
1906.....	75.74	2.49
1907.....	45.20	1.99
1908.....	42.50	1.65

Dividend Results.

The examiners' report also gave the following specimens of increases in rates of annual dividends and accumulations of deferred dividends, from 1905 to 1908, to which "The Chronicle" adds the figures for 1909 which were omitted, although the report is signed March 28, 1910:

These are but a few of the many records, contained in this report, of splendid achievement, unrivalled perhaps in the history of life insurance in any country, which were almost wholly overlooked in the "publicity statement," to call attention to three

alleged short-comings, but one of which—and that the least sensational—seems to have been borne out in any degree by the facts set forth.

THE CHICAGO CONVENTION.

The National Association of Local Fire Insurance Agents has fixed September 12, 13 and 14 as the date of its fifteenth annual convention, to be held in Chicago. This date, it is be-

lieved, will best accommodate the greatest number of agents, considering the fact that the delegates come from all parts of the country.

The Chicago board and the Illinois Association of Local Fire Insurance Agents are working together on the plans for the entertainment, while the officers of the National Association are busy formulating a program. The local details and arrangements are in the hands of Cyrus A. Hardy, M. L. C. Funkhouser and W. S. Herrick.

It is expected that the holding of the meeting at Chicago, the great

center of underwriting in the West, will bring out a large attendance. The reports to the convention this year will be extremely important, and all the subjects considered will be of the greatest concern to the business.

PROGRESSING SOME.

British Insurance Agents Pass Examination.

The "Association of Brokers and Agents," of Great Britain, is but three years old—much younger than similar organizations in this country. Yet in the president's opening address at the fourth annual meeting on May 11, the following was reported to the members, according to the "Post Magazine," of London:

Entrance Examination Foreshadowed.

Under their rules they had made very careful inquiries in connection with every application for membership, and in the future they would have to take even greater care, so that the public might know that in engaging an incorporated broker or agent they could rely upon his understanding the business which he undertook. Provision had been made that in 1912—or at an earlier date if the council thought fit—every applicant for membership must pass an examination.

To Be F. C. I. B.'s.

This idea was also followed up in the address, as follows:

Members might properly ask how they were to inform the public that they were members of the Corporation of Insurance Brokers and Agents. They would be entitled to describe themselves as "Incorporated Insurance Broker" or "Incorporated Insurance Agent." In addition they would be entitled to the use of certain initials after their name, according to the grade of membership to which they belonged. A broker established and carrying on business for five years would be entitled to call himself a Fellow, a broker of three years' standing an Associate, while agents would be called members. They would be able to use the initials F.C.I.B. and A., A.C.I.B. and A., or M.C.I.B. and A., standing respectively for Fellow, Associate or Member of the Corporation of Insurance Brokers and Agents. He sincerely hoped that this fresh start which the association was making would place the business of insurance broker and agent in a far higher position than ever before.

THE EMBARGO RAISED.

The State of New York has abandoned the attempt to limit the volume of business that life insurance companies may do in any one year, as fixed under the much discussed "Section 96" of the so-called Armstrong code of revised insurance laws. This abandonment is expressed in the repeal of the former law and the passage of a substitute act which makes the following provision as to the volume of insurance that may be written:

No domestic life insurance corporation shall issue in any year new policies for a larger amount in the aggregate than as follows, to wit: If the total amount of insurance by said cor-

poration in force on the thirty-first day of December of the preceding year is more than fifty million dollars, and not in excess of one hundred million dollars, not more than thirty per centum thereof; if more than one hundred million dollars, and not in excess of three hundred million dollars, not more than twenty-five per centum thereof, or thirty million dollars, whichever is the larger; if more than three hundred million dollars, and not in excess of six hundred million dollars, not more than twenty per centum thereof, or seventy-five million dollars, whichever is the larger; if more than six hundred million dollars, not more than one hundred and fifty million dollars, or it may increase its new business over the largest amount issued in any one of the three years immediately preceding in the proportion in respect to said amount which the difference between twenty-five per centum of its net renewal premiums computed according to the bases of mortality and interest assumed in calculating its liabilities, and its total expenses for such preceding year, after deducting from said total expenses (1) the items of first year expenditure specified in the first sentence of section ninety-seven of this chapter, (2) its actual investment expenses (not exceeding one-fourth of one per centum of the mean invested assets) and (3) taxes on real estate and other outlays exclusively in connection with real estate, bears to said net renewal premiums; provided, that in determining the amount of insurance in force and the amount of new insurance issued, industrial policies issued upon the weekly premium plan and all premiums on such policies and the expenses in connection with such policies, shall be excluded and there shall be included only that insurance upon which the first premium or instalment thereof has actually been received. A foreign life insurance corporation, which shall not conduct its business within the limitation and in accordance with the requirements imposed by this section upon domestic corporations, shall not be permitted to do business within this State.

The Eastern Union situation, as well as that of the Western Union, seems to hinge largely upon the fact that Evans is in Europe.

IN SUSPENSE.

The Eastern Union difficulties are not yet ended and the future cannot be safely predicted. The situation as it exists is so involved that everybody seems to be holding breath and walking on egg shells.

It was expected that the internal distress would have either a dose of paregoric or goat lymph at yesterday's session, but it seems that it was unfated. Next week may see action, and so it may be safe to hope that the stiff-necks may die or resign in the interim.

INSURANCE IN FORCE

FIFTY MILLION DOLLARS

IN NEW ENGLAND

DR. HALLEY, ASTRONOMER AND—ACTUARY; COMPILER OF THE BRESLAU TABLES.

During recent days, while the name of Dr. Halley and "his comet" was in everybody's mouth, a vague memory came to your correspondent of having read something to the effect that this eminent man of science was also a pioneer in the domain of actuarial knowledge. A Boston life insurance company courteously put its library at the disposal of the writer, who, after a brief search, succeeded in verifying his impression even more completely than he had dared to expect, in a work published in 1853, entitled "Annals, Anecdotes and Legends of Life Insurance." The author was John Francis, who also produced a "History of the Bank of England," and whose lively style of narration imparts interest to what, in the hands of many another, would have been a somewhat dry topic.

Dr. Halley, Author of Breslau Tables.

After showing how scanty, untrustworthy and fragmentary were the materials available for life insurance calculation towards the end of the seventeenth century, Mr. Francis says:

Such was the limited nature of the statistics of life when the Astronomer Royal Halley compiled those calculations which make his name honored by directors and actuaries. To him we owe the germ of all subsequent developments of this science, in that general formula for calculating the value of annuities which is yet regarded with so much respect.

Up to the period in which he lived—the latter half of the seventeenth century—the town of Breslau, in Silesia, was the only place which recorded the ages of its dead; and from these Halley drew a table of the probabilities of the duration of human life at every age. This was in 1693, and was the first table of the sort ever published. In it he taught, with great clearness and exactness, the conditions needful for the formation of rates of mortality; the manner of forming them with complete geometrical precision; of deducing a corresponding table of the present State and annual movement of the population; of reading in them the probability of survivorship of any person taken at random in a given society; of, in truth, concluding upon the probable duration of the co-existence of several individuals from the sole knowledge of their age. He also first developed the true method of calculating life annuities, taking for his guide the rate of mortality during five successive years in Breslau."

Francis also remarks on the foundation of the Amicable Life in 1706, and the curious table of rates which

it adopted. The entrance money, annual payment, and annual return were the same at all ages taken—from twelve to forty-five—and irrespective of the health or lack of health of the person insured. This extraordinary plan is commented upon by Mr. Francis in the following words:

It is said that the Amicable had no data; but Dr. Halley had already published his tables, and Vulture Hopkins, or Mr. Snow, the banker, or any money monger, would have taught the directors their error.

That the beginning of modern life insurance enlisted the interest of many of the shining lights of learning in the seventeenth and eighteenth centuries, is clearly shown by the researches of such men as Halley, Pascal, De Moivre, De Witt, Morgan, Huygens and others not instantly recalled.

Smoke Talk B. L. U. A.

The smoke talk of the Boston Life Underwriters Association at the City Club last Friday afternoon, attracted between fifty and sixty members, who listened to an interchange of ideas on "Business and Partnership Insurance," from Messrs. Haven, of the Phoenix Mutual; Voodry, of the Mutual Benefit, and F. W. Fuller, of Springfield, president Western Massachusetts Life Underwriters Association, who gave a particularly fine exposition of the intricacies of that branch of the business. A general discussion followed, in which Messrs. Flood, Lake and Gammons took part, and aided the purpose of the gathering, which closed the meetings of the association for this season.

New England Brevities.

Truly, time has worked wonders since the reign of George III. to the ascension of George V., witness the sympathy shown by New England for Old England in her sorrow. There were the flags at halfmast on the New England and the John Hancock Mutual buildings in Boston, the latter structure named after one upon whose head a price was set by the government of George III.

A press dispatch from Paris states that at the Academy of Science, Professor Armand Gautier has announced that Dr. Botrel had invented a process by which celluloid could be rendered practically inflammable. This, if true, will be of good news to the comb factories at Leominster, Mass., and the fire underwriters that take risks on them.

Jeremiah J. McCarthy, Mayor Fitzgerald's appointee for the fire commissionership of Boston, has failed of confirmation by the Civil Service

Commission. It is now reported that the mayor will remove Fire Commissioner Parker this week, and name some municipal department head as acting fire commissioner until a new man is approved by the Civil Service Commission.

At the fifth annual meeting of the Aetna Life Club in Hartford last week, A. Higgins, president of the City Bank Club of New York, gave a talk on the value of office clubs. B. B. Merrill was elected president of the Aetna Life Club, and J. L. Wiley secretary for the ensuing year. An outing is to take place at Compounce Pond June 18.

The bill sponsored by Representative Conway and providing for the establishment of a general old age pension system, has at the request of that gentleman, been referred by the Massachusetts House to the next general court.

Boston men were in evidence at the annual meeting of the Fire Underwriters Uniformity Association in Chicago last week, Gorham Dana being elected president, George H. Spooner secretary and E. A. Northey a member of the executive committee.

The territory in charge of T. K. Milne, manager for Vermont of the Fidelity Mutual Life, has been enlarged by the addition of Clinton, Franklin and Essex counties, in the State of New York.

The representation of the Eastern Fire of New Jersey for Metropolitan Boston has been conferred upon the firm of Jordan, Lovett & Co.

A BABEL OF TONGUES.

Chicago, (Special.)—The Illinois Fire Insurance Commission held hearings in Chicago five days last week. Witnesses were of many classes—business men, Eastern company executives, Western managers, the secretary of the governing committee of the Western Union, the president of the Illinois State Board, and, most interesting of all, Superintendent Charles W. Barnes, of Kansas. Some were good witnesses and some were of little assistance in throwing light on underwriting questions. For example, a couple of business men from Joliet, Ill., appeared to complain of discrimination in rates against their city. Their lack of familiarity with rating made it impossible for them to show how Joliet is discriminated against. If their knowledge had been greater they probably would have withheld their complaints. J. Harry Selz, a Chicago shoe manufacturer, had a complaint to make, but it was aimed at the Illinois District Telegraph Company, rather than the insurance companies. His risk is sprinklered and he finds no fault with the rate itself. But in order to get full credit for the sprinkler system he has to have the supervisory alarm system, and he thinks the telegraph company's charge for this unreasonable.

An Odd Complaint.

Mr. Selz's chief complaint against the insurance business is that the insured cannot deal directly with the companies. Selz, Schwab & Co. carry \$4,000,000 of insurance, but they cannot buy it direct, as they can leather; they have to deal with a middleman and let him make a commission on it.

Was Anything Overlooked?

George H. Holt, president of the Policyholders Union of Chicago and prominent in the insurance committees of several commercial organizations, was very bitter in his arraignment of the way the business of fire insurance is conducted. He charged that the existing condition operates to perpetuate fire waste; that it is indefensible from the standpoint of public policy and commerce; that the attempt to maintain it drains the country of great sums of money; that it promotes excessive and uneconomical competition, relief rates, discriminatory rates, loss producing rates, rebates and extravagance of advertising, traveling, organization, junketing and twisting, which are not only an economic waste, but are frequently productive of criminal action; that it tends to maintain corrupt political

activity; that it operates as a gross injustice to individuals and localities, and upon the principle of exacting "all the traffic can stand."

Mr. Holt challenged the assertion that present rates are unprofitable and that there is no underwriting profit under them. He claimed to be able to prove by statistics that present rates produce an income greatly in excess of the needs of the business properly and economically administered; that it is waste of income by the companies that causes the apparent lack of income.

Fell Flat.

Mr. Holt's charges were the feature of the proceedings so far which received most attention from the newspapers. They were sensational and made good "copy," but it is doubtful if they made much of an impression on the commission. Mr. Holt knows very much more about insurance than does the average business man. He has some pronounced notions, as many men have who are not confronted with the problem of making dividends for their companies in the face of conditions that they know are bad but which they cannot cure.

Many people in the business recognize some of the evils Mr. Holt mentioned just as fully as he does.

Regulate All Prices.

Vice-President M. O. Brown, of the Westchester, did not believe State rating would prove any improvement over the present system. He does not see why the State should attempt to regulate the expenses of fire insurance any more than it does that of other classes of business. He holds that insurance is a private business and not a public utility.

J. L. Whitlock, Western manager of the Glens Falls, on the other hand, looks with much favor upon State su-

"THERE'S A REASON."

The annual payroll audit method of computing premiums on employers' liability policies of insurance has long been discredited by some of the leading casualty underwriters, but the plan was initiated with the business, and it seems nobody has had the ingenuity to invent a better one, much as it is needed.

"Some companies are to-day obtaining casualty liability premiums under false pretenses," says one well-known official. "They maintain a highly organized and very expensive legal laboratory which can and does put the microscope on every claim presented solely with a view to finding a microbe that may be utilized in fighting. The Government chemists are also at work with their disagreeable microscopes and finding some million or so different forms of bacteria on Uncle Sam's paper money and his good solid coin—the smaller denominations, of course. But we all accept the root of all evil without cavil notwithstanding."

After Business Hours, Only?

The text for these remarks is found in the case of *Palmer v. Hardin v. Fidelity & Casualty Co.*, 125 S. W. (Ky.) 270, in which the court held that the conditions in the policy stipulating that the company shall have the right to examine the books of the employer at all reasonable times, so far as the payroll of the employees covered by the policy is concerned, was to be construed to mean when the books were not in use by the employer, or on Sundays, and after business hours, etc., all of which throws wide open an avenue to unfairness toward the companies, because the books of an employer—if he keeps any, and there are some who carry all accounts in their coat pockets—may be said to be always in use and thus shut off inspection. This is but one of several of the weaknesses of the present rating system.

A BABEL OF TONGUES.

(Continued from Page 9.)

pervision of rates and advocates State regulation of commissions.

President J. D. Browne, of the Connecticut Fire, proved a satisfactory witness. He was questioned as to the desirability of examining agents before they are permitted to "practice" insurance. He does not take much stock in such a plan. He does not think the State is as much interested in getting good agents as he is, nor would its examiners be able to

pick better men than his special agents are.

Preparing the Mustard.

The commission has not yet decided how it will prepare its report. The evidence first will be reduced to the salient features. Then each member may make a report and at a meeting these reports be boiled into one, subjects may be assigned to each member and all reports worked into one, or one member may be called upon to prepare the report subject to revision and approval by all the members.

Watching the Comet's Tail.

Those who have watched the proceedings from the beginning and have given close attention to the questions asked witnesses, have an opinion that while the commission is not likely to recommend State rating or rate supervision in any broad sense it is likely to make recommendations for the examination of candidates for the privilege of engaging in the fire insurance business, and also provide for a board to which individuals are insured, cities or authorities can make complaint, if they believe they are discriminated against in rates, such board to have certain powers to review and demand changes in rates. There is nothing certain about this as the members of the commission are not divulging their plans, but these questions evidently are in their minds.

Aftermath.

That was a rather notable convention of the National Fire Protection Association held in Chicago last week because it was attended by a large number of heads of fire departments from all parts of America, and, of course, the insurance companies were on deck, as were all the manufacturers of fire fighting apparatus, such as fire engines and that rotten hose that has made New York's fire department recently famous.

The particular feature of the convention was its doing something, or, rather, making a start in that direction, by deciding to do or undo, these things:

Resolutions.

The National Fire Protection Association assembling for its fourteenth annual meeting, while enjoying the consciousness of many years of work well done, faces the future with no diminution either of its sense of public responsibility, or its obligation to prosecute to the utmost its campaign against the fire waste.

Although the past two years show property losses by fire slightly less in volume than the monstrous average of the five years which immediately preceded them, the waste of our created resources is still so stupendous as to

threaten the impoverishment of our people and contrast us most unfavorably with the more prudent countries of Europe.

Conscious of these vital facts and serious and deplorable conditions we once more publicly emphasize the principles for which we stand and the objects for which we are striving, to wit: The conservation of both natural and created resources by the prevention of the same from destruction by fire. With this object we advocate:

1. The continued encouragement of fire resistive building construction and the adoption of suitable building codes by all cities and towns.

2. The rigorous State and municipal regulation of the transportation and storage of all inflammable oils and explosives.

3. The especial safeguarding of schools, theatres, factories and all other places in which numbers of people congregate or are employed.

4. The adoption of the automatic sprinkler system as a fire extinguishing agent in all commercial establishments and city blocks.

5. The universal adoption and use of the safety match.

6. A safe and intelligent celebration of Independence Day.

7. Special education of children and their parents in habits of care regarding fire.

In the furtherance of these objects we solicit the co-operation of all public spirited citizens in the extension of our membership and the dissemination of our valuable literature, to the end that the substance and lives of our people shall not continue to be dissipated by a reckless and easily preventable waste.

NEW LIABILITY LAW AS- SAILED.

There is no prospect of plain sailing for the new employers liability law in New York State. Its future was discussed at two public meetings held yesterday by the employees' unions and the Civic Federation. The former was composed of about half a thousand representatives of 250,000 unionists of this city. Their argument was that the bill, which has just been approved at Albany, the outcome of the Wainwright commission appointed at the former session of the legislature, limits liability to only a few of the extra hazardous trades and that the compensation it provides for is insufficient and the methods of recovering it too lengthy and uncertain.

They adopted a resolution demanding adequate compensation for all workers, injured in their employment, the compensation to be paid by the employer, and the amount and rate of compensation to be fixed by law, equalling in amount the economic loss which the injured workman sustained. It should be paid promptly, they contend, and without litigation and regardless of the particular cause of the injury. The labor men have not been able, however, to draft a specific workmen's compensation law embodying exactly what they want.

The Civic Federation held its meeting in the Metropolitan Life building and was attended by over 250 leading capitalists, manufacturers, insurance men, and large employers. August Belmont presided at the meeting, and reports were read by the chairmen of the three sub-committees of the committee on compensation for industrial accidents which the federation recently organized.

"We have been trying for several months to draft a bill which will form a basis of general workmen's compensation law, to be passed ultimately by all the legislatures of the different States," said P. Tecumseh Sherman, former State Commissioner of Labor, who is chairman of the Federation's legal committee on compensation. "Our draft will be based on the English workmen's compensation laws. According to the English laws, all injured employees receive compensation except those who deliberately injure themselves or deliberately fail to use a guard furnished by the employer. On the other hand, the employer is free from liability for unlimited dam-

ages. The negligence of fellow employees is also not imputed to employers.

"In the draft of our bill we have named the amounts of damages which the workmen or his dependents should receive. When an employee is killed the employer is to pay the dead employee's dependents three years' salary, but not exceeding \$3,000 or not less than \$1,000. If an employee is permanently disabled, the employer is to pay his half his wages for ten years, not more than and not less than \$10 a week. If the employee is only partially disabled the employer is to pay him half the difference of what the injured employee earned before and what he earned after the accident."

THE IDEA SPREADS.

The daily press dispatches of Tuesday contained an item of particularly present pertinency in stating that on the preceding evening Paul U. Kellogg, of New York, in an address before the National Conference of Charities and Correction, said:

"We must insure by law to American workmen certain minimum standards of hours of labor and of rest, of safety, of health, of restitution when the workingman is killed or injured or diseased through his work, and of current wages such as will sustain life amply."

That the economic value to the Nation of its producing elements is becoming known to and considered by the financial forces is more and more in evidence with every day that passes. The insurance feature, as based upon the law of average, is coming to be better understood. People are thinking about it now who have ignored and disregarded it in the past.

It is reported, also, that in New Jersey the authorities are bringing forward a thorough system of State insurance contributions to be made by employers, employees and the State.

"I WAS ATTRACTED

to the Prudential through the medium of an advertisement in one of the leading magazines, and soon after, placed a \$5,000 case as the result of an answered advertisement."

AGENTS WANTED FOR UNOCCUPIED TERRITORY

EMPLOYERS LIABILITY BILLS AT ALBANY.

The records of industrial maimings and slaughter in the United States are disgraceful and appalling.

It seems incredible, but it is true, that the annual roll of victims approximates half a million.

The question what is to be done to stop the carnage seems to have received little attention from the Wainwright Commission, appointed by the legislature to investigate this matter.

This commission has reported. Out of its labors have come two bills now pending.

One of these offers certain inducements to employers to enter into indemnity contracts with their employes—if they care to do so. And the other proposes to apply to a few extra hazardous occupations the compulsory principle of the English Workman's Compensation act—but the compensations proposed are very low.

The former bill has passed both houses of the legislature and is in the governor's hands. The latter has passed the senate and halts in the assembly.

Both bills slight the subject and miss the important point.

The point is that the unexampled waste of life in American mines and shops and on American railroads should be abated.

The kind of employers liability acts that we ought to have are such as will make it "bad business" to use up so much human flesh and blood in the processes of manufacture and commerce.

It is not necessary to kill or maim half a million workers every year. A perpetual civil war on a gigantic scale would be less cruel.

This awful sacrifice is offered to the god Dagon, Moloch or Mammon—simply because, under the laws as they stand, it "pays" better to destroy men's lives than to save them.

These conditions must be reversed—unless we are to abandon the hope of being civilized.

True it is that there are necessary and unavoidable risks in all businesses. A hardy people will accept such risks courageously and without complaint.

The "American" has always contended—it is an economic axiom—that the necessary risks to life and limb entailed by any trade should be considered as a part of the cost of the commodity produced. A fair money indemnity to individual sufferers should enter into the price of the goods and be paid by the consuming public.

Obviously the way to eliminate the

unnecessary killings and maimings is to charge up all accidents against the business. Then business managers will see to it that they are handicapped by no unnecessary burden.

The avoidable accidents will not happen.

They will be prevented by better organization and the use of safer machinery.

It is nonsense to say that workmen should be punished for killing or crippling themselves—by hard laws against "negligence." In the absence of proof of deliberate suicide the law should assume that every man will take pains to keep the breath in his body and continue the use of his limbs.

The legislative measures as they stand are inadequate because they have no considerable tendency to stop the carnage.

The bill that has passed both houses is unimportant—since it is purely "permissive."

The "compulsory" bill still before the assembly has rudimentary bones in it, and could be developed into something adequate by increasing the scope of its application and raising the scale of indemnities.—New York "American," May 19.

A BURGLARY CASE.

A notable burglary insurance suit has just been decided in this city. It brings strongly into the limelight the fact that the faker has found a safer and simpler method than starting a fire by merely fixing up a burglary—policy covered, of course.

In this incident the American Bonding Company issued a residence burglary policy for \$1,000 last October to one Rosenzweig, of this city, and on the following day it is claimed that burglars looted his home to the extent of \$485.

The company's attorney, Joseph A. Prager, one of the ablest legal specialists on claim adjustments in this city, offered to pay \$375 as a compromise, but this provoked a suit, which the jury settled at \$300, a verdict which clearly indicated that it was a bitter battle, and that Mr. Prager has made a record in resisting this class of burglary insurance claims. As already suggested it is easier and safer for the criminal to fake under a burglary policy than under a fire policy, which may carry capital punishment.

Frank N. Julian, former insurance commissioner of Alabama, has been nominated for the position of railroad commissioner. The nomination is equivalent to an election.

GETTING WARMER.

Competition in the surety business in Chicago is to be considerably increased in the near future. The Pacific Surety, which has cut very little figure in Illinois, has now appointed active liability general agents at Chicago, and has secured as manager of the bond department Fred W. Patterson from the home office of the United Surety. The Maryland Casualty will begin writing bonds in the city in a few days. General Agent Davis does not talk as if he intended to drive that branch of the company's business at a very high speed.

Another established company which has not done surety business in Chicago is negotiating with parties there and expects to cut something of a figure in the city soon. The Southwestern Surety of Denison, Tex., has been in correspondence with several surety men in Chicago relative to a man with whom it is negotiating a general agency.

Report has it that this prospective general agent is E. D. Petrie, at one time a member of the firm of Ayres & Petrie, general agents of the Metropolitan Surety, but now a solicitor for the Title Guaranty and Surety. For months there have been men after the Commerce Trust Company of Kansas City, trying to induce it to enter Illinois, but without avail. Now that its surety business is shortly to be turned over to the Globe Surety, which is being organized in Kansas City, it is probable that the new company will enter Illinois.

Dr. William H. Tolman, director of the Museum of Safety, has sailed for Europe for a stay of six months, under commission of the National Electric Light Association, to investigate methods for the prevention of loss of life and limb in electrical plants.

HARTFORD LIFE INSURANCE COMPANY, OF CONN.

FIRST EFFORTS.

There is an interesting try-out of the new ideas in this new plan of State insurance of divers and sundry kinds. It has a reflex in the socialistic idea, so far as the West is concerned, in the State insurance of bank deposits. It works along this line, at least so far as it has worked at all.

The State of Texas launched a bank insurance law, fully commissioned with letters of marque and reprisal and when the cruiser got a crew it went a-sailing. The first rocks, or islands, or difficulty, encountered seems to have been located around the Sanders State Bank and its cashier, W. D. Sanders, who is after the scalp of the corporation referred to.

Refuses to Come In.

Mr. Sanders refuses to have his leg pulled and emphasizes his feelings in words that must at least suggest to the careless that a laugh is in order. Listen to what he writes on the subject:

The DeKalb Exchange Bank, a private institution, was organized in 1887, and has been continually in business since. It has had its ups and downs—most of the time down—but managed to pull along to the present time.

We were opposed to the guaranty law as passed by the last legislature. We are still opposed to it, and expect to give it a rap whenever the opportunity offers. It not being our pleasure to turn our private bank into a State bank, and not feeling disposed to sit still and have a competitor yell "guarantee" at our customers, we organized the Sanders State Bank, putting in an expensive set of mahogany fixtures and fitting up a first-class banking room in every respect. A circular letter was issued and mailed to every customer of our private bank, giving our reasons for starting the State bank, and advising them to do business with the bank that suited them best—that we owned both banks, and it was a case of "pay your money and take your choice."

After four months of business, we issued a statement showing that our private bank customers had taken their choice, with the result that the Sanders State Bank had one customer, with a deposit of \$200, while on the same date the DeKalb Exchange Bank had over \$175,000 (a few days after the State Bank deposit was withdrawn and placed with the private bank).

Our banking friends over the State had more or less sport out of us on this account, and considered it a great joke on the guaranty law. Some papers published this statement with some rather caustic comments on the guaranty law, and these reports, reaching the Department of Banking at Austin, caused us to get in bad with the powers that be.

Our old customers still refused to do business with our State Bank, and the business of the private bank contin-

ued to grow. The Sanders State Bank was opened about twelve hours a day, and seven days in every week, for business, but none came. This state of affairs seems to get on the nerves of the Banking Commissioner, who claimed that we were ridiculing the guaranty law, and holding his department up to public contempt, and we were notified that the banking board would consider his motion to forfeit our permit.

The banking board subsequently sustained the bank's position.

HUNTS NEW PASTURES.

When Van Laningham, the prince of insurance promoters, jumped from New York to San Francisco it was the signal for some of his cheaper imitators to cast longing eyes Pacificward to find a more prolific field for operating than the Atlantic shores have recently afforded. It is promptly recognized that wherever Van Laningham opens up shop there is evidently good grazing ground, and the trail is promptly followed.

This accounts for reports of promotions of more or less value which float in from the Pacific Coast, ranging all the way from Mount Rainer to Santa Catalina and affords this side of the continent an opportunity to give prayerful thanks and trust that the absence of the industrious gentry, who are keen enough to skirt but not invade the boundary of the postal laws, may be long protracted.

The latest report of an addition to the Pacific colony comes from Seattle, which appears to have attracted and captured one of the most interesting specimens of this genus homo that has ever "happened this way," to speak like the "Arkansaw Traveler."

The Illinois Surety last week received the last of the written consents of its directors to the amendment of the charter so as to increase the capital from \$250,000 to \$500,000. The amended charter will be filed shortly, and in a couple of months all the new stock will probably be sold.

I notice that a number of agents are making changes from the Companies they were formerly with to other Companies. Also, that none of these agents have been in correspondence with the Philadelphia Life. Perhaps it is due to the fact that they do not read our advertisements, and I think that it would pay the agents, whether they are working for this company or not, to read these advertisements, as many a time there appear in the advertisements little arguments that would help them to secure business. For instances:—How many agents to-day are using the argument that they are insuring income, which is really what you do on every policy that you have caused to be issued by a Life Insurance Company? Now why don't you get in touch with the new up-to-date income policy of the Philadelphia Life that is different in all details from that issued by any other Life Insurance Company? Write Perry to-day.

The annual meeting of the California Association of Local Fire Insurance Agents at Los Angeles, on May 16, was unusually well attended. It was voted to favor an anti-rebate law and non-resident agents' law before the State legislation. The California association will also publish a list of co-operating companies similar to that of the National association. Messrs. Clay and LeBallister were re-elected president and secretary. Stockton will be the place of the next meeting.

FOR A FIRE BUREAU.

At the meeting of the National Fire Protection Association in Chicago last week, representatives of several of the State fire prevention associations were present, and, in conjunction with officers of the national organization, worked out a plan for closer co-operation and interchange of information among the State associations. Some of the State associations find their work goes slowly. In some States there is no fire marshal and it is very difficult to get recommendations for cleaning up and improving risks carried out. In some where there is no fire marshal, only a few field men show any real interest in the fire prevention movement. Some who have been active in the work have received from their companies hints that the expenditure of any great amount of time in this work will not be looked upon with favor at headquarters. While such an attitude on the part of the companies may look rather narrow to some, when it is remembered that a minority of companies are paying the men who are doing all the work, they cannot be blamed for setting a limit on what they will contribute to the general good.

QUALIFIED TO VOTE "YES."

The following list is remarkable solely because of the absentees. Formerly there have been a lot of names of trust and other concerns in the list, stamped "approved" by some one or another of the amusingly taped departments at Washington. Recently several names have been dropped. Some of these have been by request and others from discovery. All the trust companies have disappeared. This is as the Honorable Franklin MacVeagh, Secretary of the Treasury, gives "The Chronicle" the list of today's acceptable sureties and the highest limit for which any one will be approved on Government bonds. It is proper to state that this is the first list of acceptable sureties issued since the entire bonding business of the several departments of the Federal Government was consolidated in the Treasury bureau. Formerly each of the nine departments set up its own particular rules and regulations about the acceptance and approval of sureties on bonds, and this opened ninety-nine avenues for graft. The new rules reduce this to nine, or to a relative proportion of that element in Washington which gets and holds a job for

revenue only. But this is what Mr. MacVeagh says, in part, to "The Chronicle":

This is a list of companies which, except where otherwise noted, are acceptable as sureties on Federal bonds, within the limitations set opposite their respective names, in the judicial districts of the States wherein they have appointed process agents. **Bonds executed by companies in States in which they are not regularly licensed to do a fidelity and surety business will not be accepted.**

The American Fidelity has not added anything to the happiness of general agents of liability companies writing automobile business in Chicago by sending circulars to brokers comparing the conference rates and its own. As the latter rates are thirty or forty dollars lower than the former on cars of high horsepower, it makes good advertising matter. Cases are not unknown where the American Fidelity has secured automobile business from the direct representatives of other automobile writing companies, who found themselves in competition and unable to get the business at their own rates.

The Monongahela Fire Insurance Company of Pittsburg, Pa., has been admitted to the co-operating list of the National Association of Local Fire Insurance Agents, in accordance with the vote of the executive committee. The managers of the Monongahela, Whilden and Hancock, of this city, have furnished the association satisfactory assurances that its general agents will in every particular support the principles of the association.

The report of the committee on statistics and costs, of the National Civic Federation, at the Metropolitan Life

building session yesterday is full of interest and later will be printed in full.

L. Walter Sammis, Jr., of the home office of the Empire State Surety, has resigned to become assistant manager of the accident and liability department of the New York office of the Philadelphia Casualty Company.

HOME OFFICE OF THE Metropolitan Life Insurance Co.

(INCORPORATED BY THE STATE OF NEW YORK, STOCK COMPANY)

The Company OF the People, BY the People, FOR the People

PROOF OF PUBLIC CONFIDENCE

This company has more premium paying business in force in the United States than any other Company, and for each of the last 16 years has had more New Insurance accepted and issued in America than any other Company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburg, Baltimore, New Orleans and Buffalo.

ASSETS.

Municipal and R. R. Bonds and Stocks	\$123,346,161.39

INSURANCE COMPANY

ESTABLISHED 1836. ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS	\$13,885,802.38
LIABILITIES	8,766,622.58
SURPLUS	\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income.	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of \$2,710,650
And increase of assets in the same time of 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the Company's business, convinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

TABLE OF CONTENTS.

Single Premiums, Pure Endowment.
Accumulations, Pure Endowment.
Forborne Immediate Annuities.
Accumulated Temporary Insurances.
Accumulated Increasing Insurance.
Single Premiums Endowment Insurance.
Single Premiums Temporary Insurance.
Immediate Temporary Annuities.
Valuation Columns.
SELECT AND ULTIMATE VALUES.
Single Premiums, Whole Life.
Life Annuities.
Terminal Reserves, Life, Limited Payment, Endowment.
Mean Reserves, Life, Limited Payment, Endowment.
LOGARITHMS, SEVEN PLACES.
Forborne Immediate Annuities.
Curtate Summations of D Column.
Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
Divide temporary insurance values by immediate temporary annuities.
Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.
Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
Warranted Commissions for New Business.
Surrender Values.
Dividends.
For these purposes the "select and ultimate" will be most useful.

"Total and Permanent Disability Provisions."

An Important Paper Read Before the Actuarial Society.

Franklin B. Mead, A.A.I., actuary of the Michigan State Life Insurance Company, of Detroit, Mich., whose excellent and really epoch-making paper before the American Life Convention in 1908 was liberally reviewed in "The Chronicle" at that time, submitted at the recent meeting of the Actuarial Society of America a new and more complete and detailed study of total and permanent disability rates and reserves, under the caption: "The Total and Permanent Disability Provision in Connection with Life Insurance Plans."

He traces the spread of this provision from its origin in 1876 in Germany, its slow progress until 1900 and its rapid extension there since that year; and says:

In America its appearance among the regular companies occurred much more recently, not so remote as a decade and a half ago. The principal companies employing it in one form or another are the leading companies that do a combined casualty and life business, and, in addition to these, numerous young companies, as a stimulus to their productivity. With us the belief is rapidly extending that this "insurance of insurance" is a rational and logical addition to the life policy, so that its protection may be enlarged to provide for those who "are dead but not buried," especially as it has already been practically demonstrated that it can be done with but small increase in cost, providing reasonable precautions are taken.

* * * * *

Possibly at least a third of the American companies have a disability

provision in their policies, some providing merely cessation of premium payments, others the payment of the face of the policy in ten or twenty instalments. Until recently most of the companies had not taken the wise precaution under certain contracts of having the disability feature cease after the attainment of the age when the risk of old age invalidity becomes excessive but most of them have lately amended them in this respect.

The difficulties attending the task of securing "sufficient elements of homogeneous character" to yield a reliable standard for the probable experience of American companies are freely discussed, the author concluding that the best obtainable is better than no standard and that "we are in a position to approximate the cost in quite a satisfactory manner."

The origin of the well-known German tables is briefly traced and the material which American fraternal societies' experience yields, is preferred for many reasons. Mr. Mead is confident that American experience will be very favorable and pauses to say of this:

The conclusion does not necessarily follow, however, that because of a low mortality experience, a low disability experience may be expected. George F. Hardy in his classic essay on friendly societies, has called attention to the fact that a low rate of disability has frequently been found to occur in connection with a high rate of mortality and vice versa. This phenomenon was also called attention to and demonstrated by Alfred Watson in his admirable treatment of the Manchester Unity Experience. Nevertheless until proved to the contrary we may expect a low rate of permanent disability in connection with a low rate of mortality, particularly below about age 60.

He gives an account of the Knights

of Maccabees experience table, published by its author, Abb Landis, consulting actuary, in 1909, showing an accumulated deviation from the actual disablements of no less than 105.22 excess as against 87.1 actual. Mr. Mead remarks of this table:

In considering the treatment of this experience it must be borne in mind that the purpose of the work was to demonstrate the necessity of readjustment of the rates and plan of operation, which readjustment was introduced in 1904 on the level premium basis. Consequently, the aim was to rather underestimate the rates deduced.

Comparisons are made with various other tables as follows: Ten tables of German and Austrian experience, the British Friendly Societies (Jackson) and the Independent Order of Foresters (Pipe). The most important of these (Table A) are given on page 2.

Mr. Mead discards the German and British tables as too high and prefers the Maccabees to the I. O. F. on the following grounds:

In the tables combining the rates of mortality and of disability, I have employed for the latter that of the Maccabees for the reason that it is based upon a much larger experience than that portion of the Foresters which Mr. Pipe has thus far investigated; also for the reason that claims for cessation of premium will likely be deferred until shortly before the next premium is due, an annual premium in the majority of cases, and this will be on the average about five months say after the occurrence of disability during which time a portion will have died and appeared as death, instead of disability claims. The same reasoning will also apply where the payment of the policy in instalments is provided, since it is customary to provide for a probationary period. Again, the extended insurance feature, which would otherwise be available without

TABLE A.
Probability of Permanent Disability.

Age	Office Service (German Railways)...	British Friendly Societies (Jackson)...	Foresters (Pipe).....	Maccabees (Landis)	Ratio of Foresters to Maccabees
20.....	.00020	.00073	.00021	.00012	1.58
25.....	.00038	.00075	.00038	.00025	1.58

75.....	.33091	.04300		.43505	...
80.....	.74399	.04720		1.00000	...

the disability provision, eliminates a portion of the cost properly chargeable to the disability feature.

An important feature of the paper is a table of mortality among the totally disabled, deduced from the experience of the Knights of the Maccabees, graduated by Mr. Mead and here presented for the first time. It is based on 2,927 disabled lives. The graduation was first by King's new formula and then by the graphic method "with the intention of rather underestimating the mortality than otherwise and of blending the curve into that of the American Experience table at age 80, at which age it is customary to consider all disabled. The resulting aggregate table is given below:

Mortality Experience Amongst Invalids of the Knights of the Maccabees, 1910.

Age.		Age.	
20.....	.4000	51.....	.1267
21.....	.3471	52.....	.1267
22.....	.3036	53.....	.1268
23.....	.2677	54.....	.1268
24.....	.2386	55.....	.1268
25.....	.2155	56.....	.1260
26.....	.1976	57.....	.1260
27.....	.1840	58.....	.1279
28.....	.1738	59.....	.1270
29.....	.1661	60.....	.1270
30.....	.1601	61.....	.1270
31.....	.1552	62.....	.1271
32.....	.1510	63.....	.1271
33.....	.1464	64.....	.1272
34.....	.1433	65.....	.1272
35.....	.1406	66.....	.1273
36.....	.1382	67.....	.1273
37.....	.1361	68.....	.1274
38.....	.1343	69.....	.1275
39.....	.1328	70.....	.1276
40.....	.1315	71.....	.1278
41.....	.1304	72.....	.1281
42.....	.1295	73.....	.1285
43.....	.1288	74.....	.1290
44.....	.1282	75.....	.1297
45.....	.1277	76.....	.1307
46.....	.1273	77.....	.1322
47.....	.1270	78.....	.1346
48.....	.1268	79.....	.1385
49.....	.1267	80.....	.1445
50.....	.1267		

The graduation appears to be good,

the deviations being small and with frequent changes of sign and the accumulated deviation only 10.9 over 1,073 actual deaths. The mortality is underestimated, however, almost constantly, up to beyond age 70 where the exposures are small.

Comparisons are made with other tables and specimen rates of mortality, graduated on a select basis, under the German compulsory invalidity insurance law are also given, the latter showing conclusively that graduation on a select basis is essential in order to get reliable notions as to the longevity of the disabled. The same is also indicated by the comparison made, as to the value of an annuity due upon a newly disabled life, as follows:

Expectation of Life and Corresponding Annuity. Values Amongst Those Just Disabled.

Age.	German Experience Under Compulsory Law.		—Foresters— (Pipe)		Maccabees (Mead)	
	e_x^1	a_x^1	$a_{[x]}^1$	a_{x+1}^1	a_x^1	
20.....		...	2.80	4.24	2.99	
30.....	9.48	6.24	4.73	6.78	5.74	
40.....	10.02	7.11	5.02	6.83	6.32	
50.....	10.04	7.71	4.92	6.20	6.39	
60.....	8.96	7.48	4.80	5.56	6.31	
70.....	...	...	5.00	4.93	5.97	
80.....	...	...	...	...	4.44	

The paper proceeds to develop formulas and commutation columns for the computation of net premiums and reserves.

A table, combining the American Experience Mortality Table, with the Knights of the Maccabees invalidity table and invalid mortality table, is given. It shows all but 280 of the 14,474 survivors to age 80 to have become disabled, all at higher ages being treated as disabled. This table is accompanied by commutation tables at $3\frac{1}{2}$ per cent. interest and by a table of annuities for active lives and for invalid lives. These tables bring out the following net rates for cessation

of annual premiums on becoming permanently disabled:

Extra Annual Premiums for Cessation of Annual Premium Payments on Becoming Invalid Before Age 80.

Age.....	Ordinary Life..	20 Payment.....	10 Payment.....	15 Payment.....	20 Endowment..	15 Endowment..	10 Endowment..
20.....	.31	.02	.02	.01	.04	.04	.04
25.....	.45	.04	.03	.03	.06	.07	.07
30.....	.65	.06	.05	.05	.09	.10	.10
35.....	.99	.09	.08	.08	.13	.14	.15
40.....	1.55	.16	.13	.12	.21	.19	.21

50.....	4.44	1.18	.62	.37	1.36	.78	.53
55.....	8.41	4.55	2.20	1.20	4.88	2.65	1.56
60.....	16.85	14.48	9.62	4.87	14.92	10.45	5.80
65.....	41.27						
70.....	107.35						
75.....	262.27						

Concerning these, the author says:

From the rates quoted it is apparent that the disability liability is so great under the older ages at issue that sound underwriting calls for a distinct extra premium in practice at these ages if provision is made for disability occurring at the higher ages which, however, in order to afford adequate protection to the companies, would be absolutely prohibitory. It is, therefore, incumbent that permanent disability benefits be eliminated in case of disability occurring at the older ages.

Accordingly he gives the following tables of net premiums for cessation of premiums on becoming disabled, provided disability supervenes before attaining age 60 or 65, respectively:

Extra Annual Premium for Cessation of Annual Premium Payments on Becoming Invalid Before Age 60.

The following comment upon the unscientific character and inadequacy of the reserves which are usually set up, closes the paper, saving a few sentences of recognition of the work of others:

It will be seen the reserve that is usually charged up, one-half of a nominal premium, almost invariably 25 or 50 cents, is not only grossly inadequate in the majority of cases, but woefully unscientific. To charge a level premium for an insurance policy and maintain a reserve at all durations equal to half of the annual premium would be a parallel case. The laws of the various States are very lame when it comes to permanent disability. They should be amended so as to provide special treatment for total and permanent disability, so that such feature may be made an intrinsic part of the contract if a company desires to introduce the benefit under discussion. So far as my knowledge goes, the laws of only one State have a reference to total and permanent disability and this relates merely to the reserve under the circumstances. This beginning I am

sorry to say was not a good one for it determines the reserve as one-half the premium, which may be arbitrarily determined.

A BONUS RECORD TO BE PROUD OF.

The 148th annual meeting of the "Old Equitable," of London, was held at its offices on May 3. Its management was able to report new business for 1909 of about \$1,950,000, secured without the payment of commission, and an average expense rate for five years past of only 7¼ per cent. of the premiums. The expenses were about \$20,000 less than for the next previous quinquennium. The most interesting thing, however, is the rates of bonus or of dividend additions, which are:

CLEVER AND CONVINCING.

The agents of the New York Life Insurance Company are distributing to their prospects cards bearing the following significant and instructive words:

1. My total annual family expense is.....\$——
2. Deduct my personal share of same.....\$——
3. Balance—being annual income needed to support my family.....\$——
4. Estate required to yield needed income at 5 per cent. (20 times No. 3)....\$——
5. Deduct net cash value of my estate to-day.....\$——
6. Balance—estate not yet created.....\$——
7. Deduct amount now covered by life insurance....\$——
8. Additional life insurance needed.....\$——

Such things win. They deserve to win. They introduce enlightening elements into life insurance canvassing which, once understood, will never be lost from it.

John A. Robens, treasurer of the Insurance Company of the State of Pennsylvania, died suddenly last week as a result of a stroke of apoplexy. Mr. Robens entered the employe of the company as a boy and was treasurer for thirty-nine years.

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)

Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

1. For endowment policies \$15 per \$1000 insured, including previous bonus additions.

2. For life (including limited payment life) policies, as follows:

A WELL-MERITED APPOINTMENT.

The selection of Hon. Charles D. Norton, Assistant Secretary of the Treasury, for the position of private secretary to President Taft, succeeding Hon. Fred W. Carpenter, recently appointed Minister to Morocco, is a well-merited recognition of the earnest desire of an exceedingly able man to be of service to the public and his full ability to render the service. Mr. Norton had already shown marked ability before he accepted the appointment as Assistant Secretary of the Treasury at the hands of Hon. Franklin MacVeagh, his friend of many years. He had been general agent of the Northwestern Mutual Life Insurance Company at Chicago, with an income largely in excess of \$50,000 per annum, built up by his own efforts; and this he laid aside, except as to his renewal interest in the business already established, in order to accept this opportunity for public service, at a salary of but \$4,500 per annum.

Mr. Norton accepts the position "under leave of absence from the Treasury Department," so that he may return to that department if he so desires, or if the President should find any person whom he prefers. This is a very unusual thing and indicates the warm desire of his former chief to retain or regain his services, if possible.

The Washington correspondent of the New York "Evening Sun" makes the following comment upon the prevailing opinion in Washington as to this appointment:

Mr. Norton's appointment was not a surprise to those familiar with the administration here. He is regarded as one of the bright men of the administration and has made hosts of friends among congressmen and public officers since he came here at the request of Secretary MacVeagh, a little more than a year ago. Although he has been in the Government service but a short time, already he has instituted reforms which mean the saving of millions of dollars annually. In the opinion of his friends he will do more to "rejuvenate" the Taft administration than almost any other available man could have done. He has the confidence of the President and his advisers and of all the officers and politicians with whom he has come in contact.

PROMOTER'S NERVE.

In the matter of nerve on the part of promoters, the limit is reached in the "Old Line Life," of Milwaukee. One Rupert Fry, acting as general agent, handled the job, paid generous commissions to solicitors who placed the stock, and prudently kept the tidy

sum of \$55,000 of the contributions in his own pocket. A full account of these "high finance" operations appeared two weeks ago in "The Chronicle."

Under the storm of criticism that followed the Wisconsin department's disclosures, everyone expected Mr. Fry to take to the tall timber. The official disapproval of the home insurance department, and the natural condemnation of the press would seem enough to make for a repudiation of Fry and his retirement as the head of the company.

In a reply to critics, Mr. Fry intimates unfairness on the part of the department, and avers that there were other promoters getting a bigger slice than he did; in fact, that he could even have spent more money than he did! This is justification with a vengeance.

What about the stockholders? Just now they are supposed to mournfully pocket their loss, and be glad that Fry didn't spend more in exploiting the company. Report has it that they are not only resigned, but cheerful over the prospect. Fry's friends maintain that directors and stockholders alike enthusiastically uphold him, and sniff at the pittance of \$55,000 for bossing the job.

But it is hard, very hard, to start new companies. It is a hard task for the most experienced and able underwriters. The "Old Line Life" is doubly handicapped. It has not the underwriter of proved experience. It has the odium of the promotion scandal; and this load it must carry, as long as the gentleman who manipulated that deal, stays at the company's head.

The stockholders paid in a little over a million dollars; about \$700,000 now remain.

The Fidelity and Deposit Company, of Baltimore, will be ready to write casualty business September 1.

SUPERINTENDENT LEMERT DISSATISFIED.

Hon. Charles C. Lemert, Superintendent of Insurance of Ohio, neither content with the decision in favor of the Union Central nor with appealing against that decision, thus pays his respects to the company and the courts in his annual report:

This is the first reported case of which the department has knowledge wherein a court has held that that portion of the surplus derived from mutual policies and retained for the benefit and security of the company and its policyholders belongs to the stockholders of the company.

This holding is apparently upon the theory that the policyholders' rights are fixed by the policy contract which provides that they "shall participate in the profits as apportioned by the company," and having already participated therein by the receipt of regular annual dividends, their rights to further share in a distribution of the surplus are at an end. In other words that the policyholders are entitled to share in the earnings of their policies only to the amount the officers of the company may apportion them.

A Severe Indictment.

It would seem the holders of mutual policies will hardly be content when they understand that the moderation of the stockholders is the only barrier that stands between them and the appropriation of the surplus derived from mutual policies.

This department prepared a bill and had it introduced in the general assembly in January, which sought to limit the capital stock, dividends and distribution of the surplus of stock life insurance companies of this State. If this bill had been enacted into law, it would have fixed the rights of policyholders and stockholders to dividends and surplus. The public should have some legal guarantee that surplus derived from participating policies belongs to the policyholders, and it is to be hoped the next general assembly will provide such guarantee by appropriate legislation.

The Sovereign Fire, of Toronto, will shortly enter New York and transfer its deposit from Minnesota. In view of this California will license the company.

"THE NEW CONVERTIBLE LIFE POLICY."

"The Metropolitan," for May, prints the following description of "The Convertible Policy," which it is issuing for \$250 units at 25 cents per week, to adults, and for \$125 units at 10 cents per week to children:

The idea is this: Probably every man knows what amount of insurance he would like to carry, and surely can tell how much premium he can afford to pay every week, or every four weeks, for it. What usually puzzles him is to decide what form of insurance he ought to take. We claim to have solved this problem with our convertible policy. Let him inform us how much he can spare a week and the policy does the rest. It solves the problem by giving the maximum protection, having regard to the uncertainties of income for long periods of time. Ordinarily we would say to a young man or woman age 20 who can afford \$13 a year: Take an ordinary policy for \$1,000 if you want the most protection; or if you want to pay during the most productive years of life, take a 20-payment life policy for \$500; or if you want to save and enjoy your money, pay a little more and take a 20-year endowment for \$500. But this presupposes a confidence on the part of the applicant that he can continue the annual payments for life or for twenty years, as the case may be. That is not the situation of the wage-earners. If it were, industrial insurance would have no vocation. The workingman has not thirteen dollars about him at any one time to pay for insurance, and he has no feeling of security that he will be able to permanently keep up so large a payment. But one of the better class of workingmen can well say: I can save twenty-five cents a week and I can be sure of a dollar about me every four weeks which I can spend on insurance. Now what is the best thing in the market for one situated as I am? We answer by explaining this new plan:

"You are age 20. Take out a \$250 policy, and if you will pay \$1 every four weeks you will have it fully paid up—a free policy for \$250—in 11 years and 38 weeks. You will then be only 32—a young man still, earning money and able to save your dollar every four weeks. If you want to keep on paying for another year and seven weeks your policy will become an endowment of \$250, payable at age 65, when you will need it, and meanwhile your policy will be free for \$250 payable at death. But even at that date you will be only 33, still with an income; pay 49 weeks more and your policy, remaining free, payable at death, will also be an endowment payable at age 60. But that further period of payment will find you only 34; pay a year and 22 weeks more and your policy will be a 20 year endowment, payable at age 55 or prior death. You will then be less than 36. If you wish to keep up your payments for two years and seven weeks more your policy will be a twelve-year endowment, payable at age 50 or at prior death. At the expiration of that period of premium payment you will be about 38; pay three years and nine

weeks more and you will get your \$250 paid to you in less than five years thereafter, namely, at age 45."

The great advantage of this plan of insurance is that the policyholder can, if he desire, stop at the end of any of a number of fairly short intervals and have free or paid-up insurance, and can, if he desire, continue from one period to another, each a short one, each time shortening an endowment period five years.

This is the policy which the Metropolitan Life Insurance Company put out something over a year ago, immediately following the issue of a two shilling four weekly policy of the same type by the Prudential of London. The Metropolitan also encourages the collection of four weeks at a time and would have made premiums payable that way, had it not been that under the laws of New York such would not have been regarded as industrial and would have counted as ordinary against the \$150,000,000 limit. The limitations of section 97 as to cost of new business would also have applied; but the commission paid is so low that it is not believed that this alone would have dissuaded the management.

The big thing about this plan is that it is the first "winner" in monthly business; all previous essays at it, both in Great Britain and in this country, have been failures, either as regards economy or as regards volume or both. The Metropolitan's record is not known, but it is known that it is doing a big business in these policies and the diminishing expense ratio in its industrial department is doubtless due in part to this fact.

In the Prudential, of London, it is rapidly gaining favor, as compared with weekly premium business, though sold at a much lower rate of compensation both for new business and collection. "The Commercial World," of London, says of this in its issue of May 16:

At the present time many districts are rushing up records in monthly

business. The superintendent and his staff realize that they have got hold of a good thing in the M. O. table, and are working it for all they are worth. The district vessel has got the signal from its captain "Full steam ahead," and the progress, as dear old Dominie Sampson would have said, is "prodigious." But there are dangers even in rapid transit. There are perils even in progress.

H. A. Harben, chairman of the Prudential, put the matter succinctly when he said, "Increase is a very good thing, but profitable increase is better."

This is where the shoe pinches.

I do not refer to the terms paid for monthly business; they appear to me to be perfectly satisfactory, taken in conjunction with all the circumstances.

But is it wise to neglect the good old weekly industrial debit which, say what you like, has been the foundation of all the great industrial ordinary offices, for the sake of the new departure?

It certainly is not safe, and though the monthly business may seem to offer a short cut to large increases, yet, like my short cut across the Serpentine, it may lead to very thin ice and sudden disaster.

A. C. Thompson realized this some time ago, when he reminded the outside staff that "It must not be forgotten that the weekly branch is the mainstay of our company, and that the monthly department is an accessory, not a substitute."

Manager of Agencies.

MERGER OF CITIZENS LIFE AND CITIZENS NATIONAL.

On May 23 the merger of the Citizens Life Insurance Company, of Louisville, into the newly-organized Citizens National Life Insurance Company, of the same city, was brought to a successful conclusion. The Citizens, which has been one of the most phenomenally successful of the newer companies in growth and in the volume of new business secured, turns over its business and reserves to the Citizens National, with \$1,500,000 paid-in capital, contributed by over 5,000 stockholders and with authorized capital of no less than \$5,000,000.

W. H. Gregory, founder and president of the Citizens, continues as president of the Citizens National, with the following staff:

Charles D. Pearce, first vice-president; R. E. Gregory, second vice-president; J. W. Lam, third vice-president; George Bohon, fourth vice-president; W. W. Moore, general manager; Helm Bruce, general counsel; Sidney Smith, assistant counsel; L. W. Key, treasurer; W. H. Albritton, assistant treasurer; J. W. Peake, secretary; W. S. Peake, assistant secretary; H. Z. Churchill, assistant secretary; J. F. Holland, auditor; J. Petrus, cashier; Dr. Thomas Hunt Stucky, chief medical director; Dr. W. Ed. Grant, medical director; A. C. Home and Huelling Davis, agency directors.

Departmental divisions have been established at St. Louis, Birmingham and Atlanta, each in charge of executive officers and with a large measure of local autonomy. The south central department, at Birmingham, is in charge of Fifth Vice-President Geo. D. Burdett; the west central, at St. Louis, of Sixth Vice-President W. W. Hines, and the southeastern, at Atlanta, of Seventh Vice-President E. L. Moore.

The home office of the company will, sooner or later, be removed just outside of Louisville, as a protest against the oppressive tax rate levied against the Citizens there. Of this, President Gregory says:

Another important move will be the building of a home office outside of Louisville. It is estimated that this will effect a saving in taxes for the first five years of over a quarter of a million dollars, or the equivalent of a 5 per cent. dividend on \$1,000,000 on stock.

The location chosen is at Anchorage, a suburb of Louisville.

By the merger, it is said, Citizens Life stockholders received one and one-half shares of Citizens National stock for each share of stock in the old company; including cash dividends, declared this year, they get

about \$600,000 in cash and new stock for \$370,000, par value, of old stock.

The management makes no secret of its purpose to seek to bring about the merger into itself of as many of the younger Southern companies as possible by exchanging shares, by purchasing the business, or, if necessary, by purchasing the stock outright.

EQUITABLE VICTORIOUS IN FRANCE.

Word has been received by the Equitable Life Assurance Society of New York on May 31 that the Council of State in France, the highest government authority upon the subject there, has decided in favor of the company, the issue between it and the French government as regards the application of the provision in the insurance laws of 1905, relating to accounting with individual holders of tontine policies, as to policies issued before the act went into effect as regards the Equitable, by the company's registering thereunder.

The position of the Equitable in regard to the matter was that to comply with any such requirement would be to violate its contracts and that, while such requirement might reasonably apply to policies issued thereafter and after the company was licensed under the new act, it was not reasonable to hold that it was retroactive in effect and applying to policies already in force, issued in good faith and in which entirely different provisions in regard to the apportionment had been made.

When the law passed in 1905 went into effect and the question of compliance therewith came before each of the three large New York companies which were then doing business in France, the Mutual Life Insurance Company, after making an investigation, decided to withdraw from France, or, rather, not to take out a license under the new law. Of course, it was permitted to continue and take care of its business already in force. The New York Life Insurance Company, after considerable negotiation with the French government, decided to comply with the requirements of the law as interpreted by the government. The Equitable Life Assurance Society was advised by its counsel, the late Edmond Kelly, and Mons. Millerand, the present Minister of Public Works of the French government, and formerly Minister of Justice, that the law, fairly construed, did not require the company to make any such accounting with individual policyholders as to

business already in force. Accordingly, the Equitable joined issues with the government in the matter; and it had been under consideration for over three years prior to the determination of the question by the Council of State, now announced.

Companies doing business in North Dakota complain of alleged rate cutting methods adopted by the Dakota Trust Company and the Northern Trust Company of Fargo in cutting surety rates. These companies are said to be writing bonds at half the regular rates. Both these companies were recently dropped by Uncle Sam from the acceptable lists.

The

BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

- Low premium rates.
- Large surrender values.
- Dividends at the end of each policy year.
- Thirty-one days of grace in payment of all premiums after the first year.
- Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.
- Loans for the full cash surrender value.

Policy payable in one sum or in instalments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

INSURANCE JOURNALISM LIVELY IN CHICAGO.

There is considerable talk at present in Chicago about the newspaper prospects. Since the Chicago "Tribune" gave up its insurance column in 1905 the "Record-Herald" has had a monopoly of the daily insurance news. Now, however, it appears likely to have competition enough. Some weeks ago it was announced that Victor Polachek, former managing editor of Hearst's Chicago "American," would shortly begin the publication of the "Commercial Times," on the lines of the "Journal of Commerce" and "Commercial Bulletin" of New York. He already has secured as insurance editor P. J. V. McKian, editor of the "Argus." The Hearst people, it seems, were displeased at Mr. Polachek's leaving their service and becoming a competing publisher, so they have announced that they will publish the "Commercial Journal." They will issue the first number of their paper on June 6, while the "Commercial Times" is not scheduled to appear until about a week later. Hearst has the advantage of a fully equipped publishing plant, while Polachek is only getting his installed now. The "Commercial Journal's" subscription price is to be \$10 a year, while that of the "Commercial Times" is to be \$12, and Hearst is said to have quoted lower advertising rates than Polachek has. Evidently the two youngsters are going to have war from the start.

Four Richmonds in the Field.

This prospective activity in commercial journalism has stirred up the "Tribune," and it is considering putting on an insurance column again. If it does there will be four men working the insurance district for daily news, to say nothing of the representatives of the regular insurance papers. This excessive competition, in the opinion of some, is likely to result in none of the papers getting any insurance advertising in Chicago to amount to anything. During the years the "Record-Herald" has been the sole purveyor of daily insurance news in the city, its insurance advertising has been very limited, except on occasions somewhat out of the ordinary. There is no prospect that companies are suddenly going to quadruple their advertising patronage.

The insurance public is likely to profit in one way from this war among the newspapers—the "Record-Herald" will have to improve its service. When it and the "Tribune" were com-

petitors in this line each gave about two columns a day to insurance. When the "Tribune" withdrew from the field the "Record-Herald" gradually cut down its insurance space to about a column. It is understood the "Commercial Times" expects to give about three columns a day to insurance, so the "Record-Herald" will probably have to loosen up somewhat on space.

A NEW CHICAGO COMPANY.

The German National Life Insurance Company, of Chicago, has completed its organization and has taken over the business of the German Mutual Life, of that city, amounting to about \$4,700,000, carrying reserves by the American Experience table and $3\frac{1}{2}$ per cent.

The officers are as follows:

President—Samuel T. Gary, a Chicago attorney.

Vice-President and General Manager—Edward C. Brazier.

Secretary—F. W. Ritzmann, of Ritzmann, Brooks & Co., printers.

Treasurer—F. A. Rauch of F. A. Rauch & Co., upholstery goods.

Medical Director—Dr. A. W. K. Downes.

Vice-President Brazier is the insurance man of the group and is justifiably proud of having secured the capital for the new company at a net cost of less than five per cent.—an enviable record in these days of extravagant stock commissions.

CLAIM MEETING POSTPONED.

Owing to inability to secure hotel accommodations at Atlantic City June 15-17 the chairman of the executive committee of the International Claim Association announces a postponement to September 7-10, same place.

This is no doubt a severe disappointment to many of the distant members who had indulged dreams of the Atlantic City brand of sad sea waves and—

JUMPED TOO SOON.

Owing to lack of familiarity with the different State laws, the organizers of the Commercial Casualty Company, of Newark, did not look ahead and when they got a bump it was a hard one. This was when New York refused them a license.

They are going back over their work and trying to repair the gaps. This includes the relinquishment of their contract with the company, an amendment of charter and the raising of \$150,000 cash.

Then they propose to make another dash to Albany and endeavor to raise their flag here. It is regrettable that the company has to encounter trouble before it has gotten fairly started.

INQUIRING INTO WORKMEN'S COMPENSATION FAVORED.

At its monthly meeting last week the Boston Chamber of Commerce, after considerable discussion, pro and con, adopted the following resolution, recommended by the board of directors, and looking to a legislative inquiry into the subject of workmen's compensation for accidents:

Resolved, that the subject of industrial accidents, the compensation that should be received by injured workmen and the procedure for determining and securing that compensation should be carefully investigated by the legislature, with the view of obviating the serious theoretical and practical defects inherent in the existing law and of establishing a system that is in the public interest, and that there should be no legislation reasonable and fair to the employers, the workmen and the community; until after such thorough investigation; that such investigation can best be carried on by a commission similar to the commissions now studying the subject in other States, which should frame legislation only after studying the plans that have been adopted in other countries and after a series of public hearings in which employers, workmen and those who have studied the subject should have full opportunity to present their views. Inasmuch as such commissions are at the present time at work in many States endeavoring to frame legislation that shall be wise, proper and adequate, any commission appointed in the State of Massachusetts should endeavor to establish relations with all other commissions with a view of securing if possible uniform legislation in the different States.

Consented to Reduction.

Members of insolvent fraternal beneficiary associations will be interested in a decision of the full bench of the Massachusetts Supreme Court, which, as summarized in a daily paper, declares that thirteen claimants living outside the State, who took \$2,000 benefit insurance from the American Legion of Honor after it had unlawfully reduced the benefit from \$5,000, were not entitled to recover the balance from the emergency funds in the hands of H. A. Wyman, receiver of the order, which became insolvent in August, 1904.

The by-law reducing the benefit was put in operation on October 1, 1900, and most of the claimants made settlements in 1901. The Supreme Court decided on March 12, 1902, in another case, that the by-law was invalid. The 13 claimants in the present case brought suit in 1904.

The court holds they cannot recover because they had waived their

rights by releases when they received the \$2,000 or because they paid assessments under the new by-law without objection and took no legal action until from two to four years elapsed.

Two or three other claimants who gave no releases or who preserved their rights by protesting against the reduction are allowed to recover the balance of \$3,000.

Francis M. Carroll Acting Fire Commissioner.

On Thursday last General Samuel D. Parker sent his resignation as fire commissioner of Boston to the mayor, which that worthy accepted on the following day, appointing in Mr. Parker's place Francis M. Carroll, an attorney and member of the Boston Bath Commission. Thus an efficient chief is forced out, and a gentleman, who, whatever be his other merits, is not experienced in his new role, becomes temporary head of the department. Despite the new plan of government in force in Boston, the mayor has not been able to curb his penchant for playing politics, and, no matter how much he may try to begot the issue, he will not be able to escape responsibility for the demoralization his action is likely to create in the department.

New England Brevities.

The Massachusetts Fire and Marine Insurance Company, Everett C. Benton president, and Walter Adlard secretary, expects to start in business about July 1. The capital stock of the company has been oversubscribed. It has leased office quarters in the building at 97 Water street, Boston, and will start with \$500,000 capital and an equal amount of surplus.

House bill 1548, relative to fire loss returns by the assured to the companies, has been enacted in Massachusetts; also the "saner Fourth" bill and the measure allowing the estab-

lishment of co-operative pension systems by employers and employed.

The reply of the insurance commissioner of Massachusetts to the contention of the Metropolitan that it has a legal right to sell its combined life and accident policy in that State, avers, in substance, that no gross premiums is expressed and no additional reserve provided for the accident portion of said policy, and that therefore the State cannot levy the tax otherwise due on accident policies issued as such.

P. A. Cosgrove, a fire insurance field man who has been active in New York State, will succeed H. H. Clutia as New England special of the Dixie on July 1, Mr. Clutia then taking service at the home office of the Continental.

A committee consisting of W. F. Rice, W. H. Lewis, F. H. Battilana and W. H. Boutell is arranging for an outing of the New England Insurance Exchange this month.

THE PASSING OF THE EASTERN UNION.

The conference "on the state of the union," held by the fire underwriters in this city last week was a rather strenuous one and after some vigorous sessions the final net result was the adoption of a resolution that a committee be appointed to draft an agreement for a new association and report as promptly as is practicable.

The committee named represents the two contending elements and the neutrals as referees, as follows:

Eastern Union—R. M. Bissell, vice-president Hartford Fire; Henry W. Eaton, United States manager Liverpool and London and Globe; George W. Howe, vice-president Niagara Fire; E. H. A. Correa, vice-president Home; George W. Babb, United States manager Northern of London.

Unaffiliated—A. E. Duncan, president Franklin Fire; R. Dale Benson, president Pennsylvania Fire; A. E. Larder, vice-president American of Newark; C. W. Gerwig, secretary Pittsburgh Underwriters; F. O. Affeld, United States manager Hamburg-Bremen.

Fire Insurance Information Exchange—J. B. Branch, president Providence-Washington; M. O. Brown, vice-president Western Fire; E. W. West, secretary Glens Falls; H. F. Atwood, vice-president Rochester German; Victor Roth, secretary Security of New Haven.

Vigorous speeches were made by R. M. Bissell, E. H. A. Correa, Alfred E. Duncan, C. W. Gerwig and Col. A. H. Wray. Mr. Bissell favored an organization which would have no subsidiary associations to which any member could not obtain admission, and one in which adequate penalties should be provided for violation of rules; that the agreement should not be changed or new legislation enacted without an 80 per cent. vote; that the membership should embrace companies representing at least 75 per cent. of the premiums written in the Eastern Union and its excepted territory, and that the members should be obligated to observe rules and maintain rates wherever it was lawful for them so to do.

The consensus of opinion among fire underwriters is that the committee will be successful in getting the necessary signatures to the agreement. A general scramble for business in the East would be most disastrous for the smaller companies, and would be a condition of affairs greatly to be deplored by conservative underwriters everywhere.

Mr. Correa served notice that if

nothing came of the committee's action and matters remained as at present the Home would play a lone hand and go in for all the business it could get.

The fact that Henry Evans' companies and the Northwestern National of Milwaukee were not represented was the cause of much anxiety and is in reality the indeterminate and disturbing element of the situation.

AN EXPANDING MEASURE.

The annual convention of State fire marshals at Milwaukee last week showed what a hold this fire marshal idea is getting on the States of the Mississippi Valley. To be sure, Massachusetts is the pioneer in this movement and two or three other Atlantic Coast States have fire marshals, but it is further West that the system is expanding most rapidly. The States represented at the convention were Ohio, Wisconsin, Minnesota, Tennessee, Kentucky, West Virginia, Nebraska and Illinois; also Manitoba had a delegate.

Ohio's department being longest established and having the largest financial support, except that of Illinois, which is not really in running order yet, shows the best results in firebugs convicted, and reduction in number of suspicious fires, loss ratios and insurance rates. The younger departments, however, are giving a good account of themselves. Within a year it is likely that Missouri, Kansas, Texas, New York and New Jersey will be added to the list of States having fire marshals.

Up to the present time much of the time of the fire marshals has been taken up in organizing their departments and performing the pressing work of prosecuting firebugs, but now there is seen much sentiment in favor of devoting more attention to conservation work in its broader sense,

such as inspections and securing the passage of building, fire limit and other ordinances by municipalities.

For Prevention.

Next year the association will meet in Chicago and new impetus will be given to the work of fire prevention by visits to the underwriters laboratories.

There are several big questions that will have to be settled before the fire marshals can reach the state of greatest efficiency. The laws under which they are acting have not in all cases been drawn with sufficient care. It has been the common custom in the West to take the Ohio law for a basis and change it somewhat for other States, but in doing this the peculiarities of State constitutions do not seem always to have received full consideration. The result is that doubt exists as to the constitutionality of certain provisions in some of the laws. Until these points are settled by the courts or the laws are amended so as to leave no room for question, the fire marshals in such States are obliged to proceed cautiously lest they involve their offices in litigation.

For Fire Prevention.

The report of the New York City Fire Marshal for 1909 affords the best argument in favor of the efforts now being made by the Board of Fire Underwriters for more efficient fire prevention measures.

The report shows 8,132 fires, less than the previous year, a decrease of 510, due to the prevention service now operative and this is pointed out as irrefutable evidence that an extension and increase would accomplish greater results in greater proportion because the service could be better organized and equipped. In other words doubling the present service would at least quadruple its efficiency in the judgment of those best informed.

The report shows annual losses of nearly seven millions of property, not to mention seventy-one lives and uncounted injuries in 1909, about the usual average. Surely any expense of prevention would seem warranted by these figures.

At present the work of prevention is done by various departments which, if the necessary legislation is effected, will be allied as a regular bureau of prevention. These departments are the Bureau of Combustibles, which looks after the sale and storage of explosives; the Bureau of Violations and Auxiliary Fire Appliances, which patrols the theatres and sees that certain buildings are properly equipped with first aid to fighting fire; the Bureau of Electric Wiring, which looks after matters of unsafe insulation, and the Fire Marshal's Bureau office, which investigates defectives flues, arson cases, and all the other things which cause, or may cause, fire.

It is not only what this department knows about when fires are most likely to occur, where they are most likely to occur, and how they are most likely to be caused, but half of the secret of the New York Fire Department's success lies in the fact that it does a tremendous amount of work toward the prevention of fire.

Waldo's Good Work.

Since Commissioner Waldo took charge of the department this branch of the work has received more attention than ever before. The other day the Merchants' Association, the Board of Fire Underwriters, and Commissioner Waldo applied to Mayor Gaynor to have a regular Bureau of Fire Prevention established.

The mayor is for it. The fire de-

partment is for it. Everybody who believes that prevention is better than cure is for it. It will take some legislation, but it is confidently expected that before long New York City will have a bureau the sole business of which will be to reduce the possibilities of fire occurring.

One of the most interesting features of the report is a chart showing the varying figures of fires by month and season, as well as the hours of the day, including the sections of the city where they most frequently originate and where they are to be expected.

That July holds the record for fires is easily explained by the presence in that month of the fiery Fourth. But it is not so easy to account for the fact that the greatest number of fires occurs on the first floor of a building, and also that the greatest number of fires is between 11 a. m. and 1 p. m. and between 7 p. m. and 9 p. m.

Another cause of fire is the time of day and the time of year. When people let their furnaces go out, and when the need for artificial illumination disappears or is extended to later hours, we notice the change in the time of fire occurrence. For instance, last Wednesday's warm weather probably saw a large number of furnaces go out of business for the season. This fact, together with the chance which always attends fire, may have been partly responsible for the fact of there being no fires reported in Manhattan, Richmond and the Bronx for sixteen hours.

Change the Building Code.

A bureau of fire prevention will work toward certain changes in the building code, will try to have legal power to remove all possible causes of fire, such as unclean cellars, and it will see to it that all fire escapes are kept free. At present fire escapes are looked after by the tenement inspectors, and other affairs which could be controlled by a bureau of fire prevention run by the fire department are at present in the charge of various outside departments.

To illustrate the work that is being done and which could be done so much better by a regular bureau of fire prevention, it may be mentioned that last year the fire department received 552 complaints relative to conditions which might cause fire. The efficiency of the prevention bureau, even as it now stands, is evident in that in 351 cases the fire department's orders were complied with, and many

future fires obviated. The remaining 201 cases were investigated, but either no just cause for complaint was found or it happened that the matters had to do with the work of some other department.

Had the "other department" been part of the bureau of fire prevention every case would have been investigated differently from fire headquarters, and every case would have been subject to peremptory orders except the few where there was no just cause for complaint.

A Dire Possibility.

"Did you ever stop to think," says a prominent underwriter, "that if a great conflagration swept the wholesale district of this city the country would go bankrupt?"

"In the district between Chambers and Thirty-fourth streets there is at risk every day in the year insurance on property valued at not less than \$750,000,000. The combined assets of the 160 companies writing business in New York city is not more than \$500,000,000. This amount includes the unearned premiums held as a liability to policyholders who have paid for their insurance in advance. It must be apparent that a sweeping fire in this district would mean not only the destruction of the insurance business, but a general undermining of the country's credit. The insurance companies would carry down with them the entire financial structure.

"This indicates the need of making the subject of prevention a vital issue with every business and financial interest in America."

This is not an impossible picture. Even with the most elaborate of fire fighting and prevention devices the city is never absolutely safe. Nobody can say how far fire will sweep when it has once gained tremendous headway at a time when the elements appear to be its allies and bent upon total destruction.

A long preventive step has been made in stopping the sale of fireworks for the Fourth of July.

Superintendent Hotchkiss, of New York, will address the New York Association of Local Fire Insurance Agents at its annual meeting, to be held at Utica June 10.

Insurance Commissioner Fred W. Potter, of Illinois, has been complimented by re-appointment for another term of four years.

TAKE TIME BY THE FORE-LOCK.

The movement among the companies themselves to reduce expenses in the West is going to be watched with the greatest interest. The companies see plainly enough what the present drift is and have little occasion to doubt that if they do not reduce expenses the States will undertake to do it for them. Long experience has taught them the tribulations that arise when the States take a hand in running their business. This knowledge may result in more readiness to agree upon something that has characterized a number of them in the past. At the recent meeting of the expense committee of the union and a number of nonunion managers it was noticeable that the nonunion contingent included only representatives of companies known to desire expense reduction and on the whole to pay only reasonable commissions. The notorious excess commission contingent is yet to be heard from.

The first step decided upon was to get the views of the various companies on the subject of expense reduction not only in the country and small cities, but in the excepted cities also.

Union and Nonunion.

Already there is talk, probably fostered by hope, that some of the nonunion companies will see fit to join the union. To all appearances this is pure speculation. When the Continental joined the union a number of companies could have joined with scarcely any changes in their commission contracts. If all, or a large majority, of the companies should now see fit to agree upon a reasonable commission scale, it is difficult to see what stronger reasons there would be for these companies to join the union than there were before. It is not inconceivable, however, that another organization composed of nonunion companies might be formed.

It is not at all likely that all the companies will voluntarily agree to a uniform scale of commissions. There are men who honestly believe that small companies must have some inducement to offer agents if they are to get a foothold, and these are not at all likely to relinquish their present privilege of paying excess commissions without a struggle. Should the sentiment in favor of reducing commissions be found to be quite general and should it be found possible to agree upon a satisfactory scale, the nonunion companies would still find

themselves in competition with excess commission companies in some of their agencies. Then the natural result would be the inauguration of a new separation movement of the low commission nonunion companies against the excess commission contingent and to start this would require some sort of an agreement among the former class.

Were They Frightened?

Of course, it would have been better if the companies themselves could have settled the expense question before the fear of legislation forced them to do something. If they can agree now it will be better than to wait for legislation, which is likely to overdo what it attempts. To accomplish the desired results, however, will require more readiness to make concessions than some of the companies have ever shown. It is now up to all the companies to bend to the opinion of the majority, as the union companies have been accustomed to do, or let the commission question become the football of legislation.

CASUALTY AND SURETY BOARD.

The executive committee of the Board of Casualty and Surety Underwriters met at the Hotel Astor yesterday, following the liability men's conference and arranged a program for the annual meeting in October which will be the most important yet held.

Kaleidoscopic changes have occurred since the last meeting, new alliances have been made and old ones voided and the end is not yet. The unprecedented development of the casualty and surety interests have created new conditions.

The committee set the topics to be considered and the papers to be read concerning them.

COMPANY REORGANIZES.

The Guardian Casualty and Guaranty, of Salt Lake City, has reorganized with \$500,000 and will go in for all lines indicated in its title. It recently reinsured the Utah business of the Bond Guaranty, of Texas. Its officers are: President, W. S. McCornick; vice-president, Reed Smoot; second vice-president and general manager, George E. Cutler; treasurer, Frank J. Hagenbarth; secretary, Lester D. Freed. Mr. Smoot is the well-known Mormon United States senator.

WANT FIRE LAWS REFORMED.

The forty-fourth annual meeting of the National Board of Fire Underwriters was held in this city last week and was notable chiefly for its protest against the present laws governing the companies and asking for an effective reform thereof.

President J. Montgomery Hare, United States manager of the Norwich Union, voiced the unanimous sentiment on this subject as well as on the subject of fire prevention. He said that the fire underwriters have not succeeded in enlightening the people of the United States on the principles underlying fire insurance business. To lessen the number of fires and to prevent sweeping conflagrations, the public, through their State and municipal governments, should enact laws which would have the effect of affording proper building regulations, provision for sufficient water supply, and sufficient fire apparatus, well and ably managed, as well as a reduction of expenses by ceasing onerous taxation.

He says:

"There is no other way than this to meet the situation, and yet what is being done? Laws are passed to govern our business that cripple it without any benefit to the insured. Laws are framed by those who have some political, revengeful, or financial purpose in view, and are passed by a body of men who have given them no consideration, and who, from the technical character of our business, have not the knowledge which can only be acquired through long training.

While many of the officials appointed by the States to supervise us are upright men and their purpose is good, in many cases they are without experience and issue under authority given them edicts which entail enormous expense and accomplish nothing. The feeling on the part of the legislatures voicing, we must suppose, the views of the people of our Commonwealths, is that insurance men represent corporations, and anything bearing that name is to be treated as an enemy of the country.

The Country Needs Us.

There will come, I hope soon, a recognition of the fact that Commonwealths cannot attain commercial prosperity without financial means, and that the aggregation of these financial means in the form of corporate capital is not a danger to the State, but a help, and should be encouraged rather than harassed.

Any legislative act which tends to harass business unfairly results in great cost to the customer, therefore I plead for greater intelligence on such subjects before laws are passed which deal with them. There is no monopoly or trust in our business. Probably one-half of our members ignore the rates which are published as guides to the business. Why they do so is because, from their point

of view, they can sell some particular kind of insurance at less than competitors—whether this judgment is correct must be determined by results.

The making of rates is a very difficult, technical matter, and from year to year we are learning by experience that changes in methods of arriving at them are necessary, and we are making them. Risks taken by fire insurance companies do not all result in claims for losses. Risks taken by life insurance companies are always based on a claim, and, therefore, life rates are on a definite basis—the duration of life and accrued interest.

Why Not Rate Life Insurance and Merchandise?

There has been no effort on the part of legislatures to name rates for life insurance. Why should this be? The answer is that the contract is one that in most cases is carried out with widows and orphans, and legislatures dare not interfere. There is no more reason for the State to name rates for insurance than to name rates for merchandise to be sold. Indeed, prices for merchandise can be ascertained much more accurately than prices for insurance.

Referring to the recently appointed State boards in Texas and Kansas, which have the power to fix fire insurance rates, Mr. Hare said that no State can fairly name rates based on the experience of that particular State because the field is too narrow. For one State to dictate rates based on the experience within its own borders, said Mr. Hare, threatens the underwriters with disaster. He also spoke of the proposed uniform insurance code which was favored by the National Conference on Uniform State Legislation, called by the National Civic Federation in Washington last January, and predicted that such a uniform code might be obtained in the future.

Uniformity Essential.

The work of conducting an interstate business, as ours must necessarily be, yearly becomes more burdensome because of the existing dissimilarity of requirements placed on the statutes by legislators wholly without experience as to the nature of our business, with the resultant effect that conditions are imposed upon us which are devoid of sound public policy and which inure to the embarrassment of the assured as well as the insurer, enhancing the cost of the former because of the increase in the expenses of the latter.

A remedy for these ills will be a dire necessity unless practical efforts are made by all concerned—public and protector alike—through the proper channels to alleviate the present unsatisfactory demands made upon us as a condition for continuing a legitimate and public-indemnifying business.

The following officers of the National Board of Fire Underwriters were elected: President, A. W. Damon, of Springfield, Mass.; vice-president, George W. Babb, New York; treasurer, Marshall S. Driggs, and secretary, Charles G. Smith, both of New York.

THE DEADLY FOURTH.

The casualty underwriters share with their fire compatriots the dread of the Fourth of July and well they may.

Last year there was talk all over the country of a "quiet Fourth," but the list of casualties from the use of fireworks was appalling, not to mention the property loss by fire.

In the United States last year the number killed and wounded reached 5,307, while in the twenty-four battles of the Revolutionary war, lasting for seven years, only 3,850 men were killed. To show how far fireworks and pistols are responsible for the slaughter, it is only necessary to quote the record last year in Cleveland and Washington. In both cities the use of fireworks was absolutely prohibited and not a life was lost nor anybody maimed or mutilated. In other large cities the list of killed and wounded was from 100 to 1,000.

In this city a new regulation prohibiting the sale of fireworks in any building used as a residence or in one not equipped with a sprinkler system, from June 10 to July 10, has been adopted, but is being fiercely attacked by a combination of 1,500 retailers backed, of course, by the manufacturers, and there seems to be an apparent inclination on the part of Mayor Gaynor to rescind the order. And the insurance people—fire, life and casualty—are all on tenter-hooks.

The mayor has declared for "an old-fashioned Fourth," but just what that means nobody seems to know. If he means a century "old-fashioned" it will satisfy about everybody, but if he refers to his youthful days there will be some worried people, for, although the celebration of the Fourth has grown worse every year, it was bad enough then, so it has been said.

ARTHUR E. CHILDS, President.

THE PINKERTONS' MISTAKE.

The recent action of the American Bankers Association in transferring its detection work from the Pinkertons, which agency has had it for several years, to another one, and which created something of a stir, was obviously for good and sufficient reasons, but the real cause is now apparent.

With loud acclaim the Pinkertons issued a handsome advertising pamphlet announcing that they had positively suppressed bank burglaries and had cleaned up the United States by the very terror their names inspired in evil-doers.

The Maryland Casualty compiled some figures for the year ending last September which show that banks burglarized in the United States were 107 and the amount stolen \$159,309, an average of about \$1,500 each.

It is estimated that there are 250,000 professional criminals of all kinds in the United States, whose sole purpose is theft. If their annual average earnings were \$1,600 each, the loss to those robbed amounts up to \$400,000,000 a year. If the cost of police, prisons, courts, destruction of property in committing deeds of violence, etc., is considered the annual cost of criminals to the United States runs up to \$3,500,000 a day, or \$1,277,500,000 a year.

Staggering Figures.

These are astounding figures, but the Maryland Casualty Company gives them out authoritatively and points the lesson that extermination of the criminal cannot be even hoped for. The best in expectation is that civilization and the criminal will maintain the running duel in a sort of balance—if that can be called a balance where the criminal takes \$400,000,000 a year at a cost to the citizens of \$1,277,500,000. The duel is illustrated by that which goes on forever between nations as to their ocean war footing—the struggle between the big gun and the battleship armor plate makers. First one forges ahead and then the other, with no decisive victory in sight. The same fight is paralleled by the safe maker and the safe cracker. Each improves his methods and works continuously, spurred on by defeat or victory at the hands of the enemy.

When they lost their fight to hold their contract with the bankers the Pinkertons immediately announced their purpose to go into competition with the burglary companies by organizing their own company to do all kinds of bank inspection and insur-

ance work, but nothing has been heard from them since then.

President John T. Stone has rendered all the burglary underwriters in America a distinct service in affording them valuable campaign material with which to offset the influence and feeling of security the Pinkertons' boasts had created among the smaller banks.

WILL NOT PURCHASE.

It was rumored some months ago that the London and Lancashire Fire had an eye on American casualty business, especially liability. This rumor was confirmed when General Manager F. W. P. Rutter came over to look into conditions with the ultimate view of securing control of an American company (several of which were known to be in the market) and entering the field. In England the company writes fire and about every known form of casualty and fidelity lines—some unknown in America—but is limited to fire under American laws.

After making a thorough survey of the conditions he has definitely abandoned the project, so far as any purchase is concerned, and as the company controls a Canadian casualty company, it is purposed to enter that in the United States, provided the idea is again taken up. At present Mr. Rutter is not favorably impressed with casualty conditions, but believes that when the proposed employers liability legislation, National and State, shall have taken some definite form and shape, conditions will improve and he may return.

The Circuit Court at Toledo overruled the motion to quash the indictments against Judge Donnelly, formerly president of the Ohio German, and his trial for embezzlement began on Tuesday.

The Oregon State Federation of Labor is distributing twenty thousand copies of a pamphlet entitled "Some Plain Facts on Employers Liability," in furtherance of the federation's campaign for a new employers' liability law for Oregon. The sponsors of the proposed measure claim to have 15,000 signatures to a petition to place the bill on the ballots at the fall election.

A SINGULAR CASE.

One of the most singular cases that has ever confronted the casualty companies is that presented by the death a few days ago of Charles C. Dickinson, a well known banker of this city.

The feature of the case of interest is as to whether he died from accident or natural causes, owing to his having \$65,000 accident insurance. It appears that he was deeply interested in some chemical experiments being conducted in a nearby city and which the "alchemist" assured him would transmute any base metal into silver and gold and the glamour of the wealth of Monte Cristo excited him to an extent that he looked into the crucible and inhaled the deadly fumes, becoming insensible and necessitating his being rushed to his home in New York, where he died a week later.

The death certificate gave pneumonia as the cause, but the testimony of the alchemist and others caused an autopsy to be made, the result of which has not yet been given out. The accident insurance companies rest on the certificate until some evidence is produced to contradict it, a quite reasonable position.

Some incidents of the case may play an important part in determining it. It is said, for instance, that the crucible was heated to a 4000 degrees F., and that the head of a person close enough to peer into it would be instantly burned off. Another phase is that the fumes he is said to have inhaled cause acute pneumonia and probably the issue will be as to the different types of pneumonia, as such, and their causes. In connection with it is cited by a correspondent a case which occurred about ten years ago in Milwaukee as follows:

Two workmen in a stamp and seal manufactory were about to lift a carboy of nitric acid when the bottom dropped out, allowing the contents to form a large pool on the storeroom floor. Not knowing what else to do, a telephone message was sent to the fire department headquarters, only a block or two away. When the chief arrived he ordered his men to cover the acid thickly with sawdust, a barrel of which was close at hand, and then shovel the saturated sawdust into the alley.

As soon as the sawdust was spread over the acid heavy white fumes arose and the firemen lost no time in clearing up the floor and then returned to their station. The whole affair did not take over fifteen minutes, but during the evening, some six hours later, one after another the men began to choke up and by midnight fire headquarters were more nearly a hospital. Before daylight the chief, a lieutenant, and, I think, three firemen succumbed and the ver-

diet was: "Acute pneumonia brought on by inhaling acid fumes."

This being the first case of this kind that the insurance companies have ever had to deal with, it is full of interest and will be watched with great care.

A FEW PROMOTION NOTES.

Promoter Armstrong.

The West Virginia Department has placed the papers and report made under oath by Robert B. Armstrong, former president, and A. S. Mitchell, former secretary of the Consolidated Casualty Company, in the hands of the chief postoffice inspector, looking to their prosecution for making false representations through the mails for the purpose of making money.

Promoter Nabors.

J. B. Nabors, who has been widely known through his connection with the promotion of surety organizations in Texas, is among the incorporators of the Standard Surety and Casualty Company, of Denver, Col., which has an authorized capital of \$500,000. Incorporation is being sought under the laws of West Virginia and the other incorporators besides Mr. Nabors are W. E. Skinner, L. B. Bridaham, T. E. Williams, Thomas Keely and J. J. Banks.

Promoter Davis.

J. W. Davis, treasurer and general manager of the Union National Securities Company, of Cleveland, which is promoting the Farmers National Life, was arrested last Sunday in Youngstown at the instance of C. D. Cover, a farmer of Polan, O., from whom a note of \$1,050 had been secured. Three warrants were issued and several other purchasers of stock joined in the proceedings. While Davis was in jail in Youngstown the Guenther Art Company, of Cleveland, replevined his picture gallery, consisting of fourteen large pictures in his rooms in the Euclid Hotel. The Farmers National Life is but another of the insurance "bubbles" that were promoted for the benefit of the promoter.

Others to Come.

One or two have gone to the Pacific, Philadelphia has a few remaining and the others have scattered, but it may be only a short time until they break into this list.

Glenn H. Curtiss suggests that aeroplanes might be used to fight fires from above. They might; firemen take so many risks they wouldn't mind a new one.

LIABILITY PEOPLE CONFER.

The Liability Insurance Association of America opened a session at the Hotel Astor yesterday to consider matters of importance relative to the new employers liability laws passed by the present legislature of New York and those pending in Ohio and other States; also to consider the matter of loss reserves.

In the absence of Chairman F. W. Lawson, Edson S. Lott presided. The meeting adopted a unanimous resolution that the New York law would necessitate a material advance in liability rates, obviously a long since foregone conclusion.

W. F. Moore, president of the New Amsterdam Casualty Company, chairman; William Bro Smith, general counsel of the Travelers Insurance Company; C. H. Franklin, United States manager, Frankfort Marine, Accident and Plate Glass Insurance Company; F. W. Lawson, United States manager London Guarantee and Accident Company; Frank E. Law, Fidelity and Casualty Company, the committee appointed at the meeting of the companies doing business in New York held at the offices of the Fidelity and Casualty Company several weeks ago, and also appointed at the meeting of the liability conference last week, were also appointed to draft a tentative bill to submit to the committee on reserves other than life, of the National Convention of Insurance Commissioners. This committee will submit a form of uniform law to the convention, which meets in Mobile in October.

FOR MORE EFFICIENT REPORTING.

It is welcome news to the surety companies that Comptroller of the Currency Murray has inaugurated a school of instruction for National bank examiners with a view to the rendering by them of more effective service. It has been a serious reflection on the Treasury Department of the United States that over half the bank failures and lootings for many years past might have been avoided if the examinations had been even moderately efficient and many a character kept high and many a soul saved from the suicide's grave.

A recent instance in point is that of the National City bank of Cambridge, Mass., where a \$12 a week bookkeeper was able to get away with \$250,000 loot, and in his confession stated that he first took a small amount expecting to return it, but was unable to do so, and when the examiner came around he thought the jig was up, but to his surprise it was not discovered, and he took some more and again the examiner did not detect the shortage. Seeing how easy it was he began operating systematically until he had cleaned up a quarter of a million.

It is probable that this evidence of such rank incompetence is what accelerated the comptroller's decision to raise the standard of efficiency of the examining force of the department.

Incidentally, the case quoted provokes the inquiry as to what could be expected of a bank that paid such office boy salaries for a bookkeeper who frequently acted as teller on \$12 a week.

Again, incidentally, it shows the increase of hazard of a risk to the surety company where the salary paid is totally inadequate to live on in the slums, such as in this case, and yet where the man is expected to make a creditable appearance before the bank's customers.

Perhaps this may be Yankee thrift on the part of the bank management, but it was the kind of economy that impoverishes, and dearly have they paid for it.

CANNOT RENEW.

Superintendent Hotchkiss has decided that the United Surety may not renew its risks in New York because of the department's refusal to renew the license. He holds that a renewal would constitute "transaction of business."

"The Chronicle" learns that there is an excellent prospect of the proposed reorganization of the company being

accomplished at an early date, and as the Maryland department has given the company a present clean bill of health, it is probable that it will secure a renewal of license and avoid the loss of its New York business, said to be the choicest on its books, with the excise risks excepted, and these will expire in September. It is quite likely, however, that Superintendent Hotchkiss will insist upon a change of home office management, subject to his approval, before acting on the license, as he did in another very recent case where a company's license was arrested.

South Carolina Relents.

The South Carolina department has rescinded its action and relicensed the company in view of the report made by the American Audit Company and such other data as was required by Commissioner McMaster. After carefully going over same, he decided to relicense the company.

MARYLAND CASUALTY READY.

The Maryland Casualty Company is now ready to write surety and fidelity bonds, as indicated by the announcement in this issue of "The Chronicle." The company has made the most remarkable record of any ever organized in America in any line. Beginning business eleven years ago, writing casualty lines, it rounded up 1909 with a premium income of \$3,849,798, a loss ratio of 41 per cent. and expense ratio of 44.5 per cent. It has paid dividends from the start, its first being 12 per cent. and its last 16 per cent.

In addition to these dividends the company has accumulated total assets of \$2,326,096, these figures having materially increased since December 31.

With the exception of the American Surety Company it will be the only company entered in every State and territory for surety business, a tremendous advantage equalled only by its splendid home office and field organization, probably not equalled by any other company.

In view of this very remarkable record what may reasonably be expected by its competitors for surety business?

M. Barratt Walker, of the Baltimore bar, is the author of a valuable work, "Fidelity Bonds." Mr. Walker's qualifications for dealing with the subject authoritatively come from his long connection with the law department of one of the surety companies and the book is described as of particular value to adjusters and attorneys.

Forborne Immediate Annuities.
Curtate Summations of D Column.
Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
Divide temporary insurance values by immediate temporary annuities.
Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.
Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
Warranted Commissions for New Business.
Surrender Values.
Dividends.
For these purposes the "select and ultimate" will be most useful.

"Employers Liability Insurance with Compensation."

A New and Valuable Policy Offered by the Travelers.

The Travelers Insurance Company, with its usual enterprise, is anticipating the rising tide of the demand for a different method of dealing with the compensation of employes and their dependents of the consequences of industrial accidents, by putting out a new policy, copyrighted by Walter G. Cowles, manager of the liability department and entitled "Manufacturers' Employers Liability Policy with Compensation."

In addition to fully covering the employers' liability under the negligence laws, the policy promises to indemnify the employer for all sums paid by him to compensate workmen who "shall sustain an injury while engaged in an occupation covered by this policy," up to as follows:

Scale of Compensations.

For temporary disability, permanent disability (while totally disabled) or minor dismemberment (i. e., severance of two or more fingers), one-half actual weekly wages after the eighth day, for not more than 52 weeks.

For permanent partial disability, after total disability ceases or after 52 weeks, one-fourth average weekly wages for one year past, until compensation has been paid for 104 weeks altogether.

For minor disablement, after total disability ceases or after 52 weeks, one-third average weekly wages for one year past, until compensation has been paid for 130 weeks altogether.

For major dismemberment (either hand, either foot or loss of eye), one-

half average weekly wages for 156 weeks.

For permanent total disability or death, one-half average weekly wages for 208 weeks.

The Conditions Few and Simple.

The total indemnities by reason of one accident to one man must not exceed one-half average weekly wages for 208 weeks and the total indemnities for one accident are limited to \$25,000.

The sole conditions are that the claimant must release the employer from liability and that the injury must not be "self-inflicted or caused by the willful misconduct of the injured or his willful violation" of rules or "while the injured is intoxicated or under the influence of any self-administered narcotic," or be "due wholly or in part to the failure or refusal of the injured to use any guard or safety appliance furnished" by the employer.

Travelers a Pioneer Always.

This is high-water mark in such insurance to date and, indeed, very probably goes quite or nearly as far as the laws are likely soon to extend the liability. It will doubtlessly be widely welcomed by the more liberal and just employers. The Travelers is a pioneer as from the beginning.

President Dunham's Advanced Position.

The officers of the Travelers have long favored a change of basis for compensation. President Dunham's first public announcement of his support and advocacy of the new view of the matter was set forth in a signed statement, published in "The

Chronicle" more than two years ago. In his letter sending out the new policy form, President Dunham reaffirms his adherence to the views then set forth, as follows:

No less than six years ago (and ever since), officers of the Travelers Insurance Company, in public addresses and in communications to their agents, pointed out some of the objections to the present method of furnishing compensation to employes for occupational injuries.

At that time public opinion had begun to show a tendency in favor of making all such injuries a charge upon the cost of production, to be paid by the employer and ultimately, under the operation of the well-known economic law, by the public.

Progress has since been so rapid in that direction that the weight of opinion will now probably support a measure in most of the United States somewhat like the workmen's compensation law enacted in England in 1897 and since with appropriate modifications in many of the English colonies, including the Provinces of Quebec and Alberta.

Commissions have since been appointed to consider the same subject in Connecticut and Massachusetts where the measures advocated failed to pass, largely perhaps because they were somewhat in advance of public sentiment in those States.

Like commissions are now engaged in thorough investigation of the same questions in the States of New York, Minnesota and Wisconsin, in which reports are likely to be made within a year. Similar commissions will probably be appointed in other States, or bills introduced without awaiting the more formal inquiry and action of committees.

There is a reason to believe that such laws, when enacted, will be founded upon the principle of the English act, which leaves employes sustaining injuries free to resort to their legal remedies, but which furnishes compensation to be paid by the employer according to a fixed scale for death and for temporary and per-

manent disability resulting from all accidents of employment.

Much may be said in support of this principle. It should save a vast amount of money now expended in litigation and it would furnish reasonable and equal compensation for all industrial accidents without regard to the various and variously interpreted doctrines of negligence, contributory negligence, comparative negligence, common employment and acceptance of the hazard, all which modern industrial conditions have made obsolete.

The rates, it is said, will be approximately two and one-half times the rates for insurance against employers liability only.

A CLEVER BOOK FOR LIFE AGENTS.

An Old Field Man's "Objections and Answers."

Under the name, "Objections and Answers," Ira C. Edwards, of Minneapolis, Minn., has put out a clever and useful book for life insurance fieldmen, the ripe harvest of more than twenty years' thoughtful and successful work in the field. Here are his "rules of conduct" for a beginner:

First—I will be absolutely truthful.
Second—I will write my insurance on the policy contract.

Third—I will sell insurance for protection and not for profit to the policyholder.

Fourth—If anybody asks me a question which I cannot answer, I will tell him I do not know, and not try to hatch up an answer that may be wrong.

Fifth—I will so work and act that I will be a welcome visitor on any part of my field at any time.

Sixth—I will under all circumstances and in all my work be Dead Square.

Lastly—I will have a heart to heart talk with at least three men a day on the question of life insurance.

With these rules as your basis and a fair knowledge of the policy contracts which you are to sell, you are better equipped for business success than the crooked solicitor who has been at it for twenty years.

And here is yet another go at him:

By what process of Darwinian descent he had finally reached the lowest level attained by the life underwriter—that of a professional twister—it is difficult to determine. He had (mis) represented nearly all of the old line companies at different times and had left behind him in almost every case a ledger balance that did not appear in the annual reports as "secured," and when the cyclone struck the big companies and the papers were teeming with "editorials" (?) written by editors (?) who were unable to distinguish between reserve and surplus, but were catering to a public demand for clap-trap, and when the whole country was throbbing over sensational reports and howling for "investigation," Keezel saw his opportunity. Here, at last, was an opening for the "twister." He seized upon it with the avidity of a pup after a flea and as a

necessary preparation for his new occupation he loaded up with a grip full of newspaper clippings, selected only such as reeked with vilification and prophetic warnings of impending disaster. Committing the most virulent of these to memory, and thus supplied with sufficient virus to inoculate his proposed victims with a fever of distrust, he sallied forth on his insidious career.

The Twister.

His detestation of the "twister" is not less than his scorn of the "crooked agent." What he says about the former is too good to lose a word of. So here it is, in full:

To do justice to this pernicious specimen of the genus homo would require a vocabulary of greater length and variety than the writer ever expects to achieve. Of one thing we are certain; he is self made, for neither God or the devil ever had any hand in his creation. He is neither of human or divine origin. His only human attribute is the science of lying, which he has reduced to a fine art. He would not know the truth if he met it face to face in broad daylight. He is as smooth as greased lightning. If all the honesty in his body was tried out into a juice, there would not be enough moisture to lay the dust on a flea's back. He has not the manliness or ability to create a demand for a life policy, and therefore his scheme is to go about hunting for some easy minded man who has a life policy and then proceed to "knock it out" and replace it with an inferior policy and pocket his ill-gotten commissions. He is as devoid of conscientious scruples as is the buzzard that fouls its own nest. He is of obvious ancestry and doubtful destiny.

Affable, attractive and boastful of his own "great honesty," he, by reason of long practice, is able to hoodwink his victim, and leaves behind him the trail of a serpent reeking with slime and stench. Never dependable or honest, he soon runs his course and is dismissed by his employer, when he puts up a good front, contracts with some other company and sets out again on his work of destruction on some other field.

He is a wrecker rather than a builder; for he often succeeds in unsettling the policy holder's confidence in his protection without selling him another policy, causing his prospect to lapse and die uninsured, in which case he becomes a deliberate robber of the vilest type, for he has robbed a widow and her fatherless children. The twister is worse than the highwayman.

In sharp contrast with this exhortation of greed under the guise of disinterestedness is the following tribute to the good done by fraternal insurance:

"You old liners are down on fraternal insurance, ain't you?"

"Indeed, I am not. I hold that any institution that goes into a man's home and pays his widow a thousand dollars when he is dead and gone, is a Godsend, and is too good a thing for an agent to be down on just because the system upon which the in-

stitution operates differs from the system which he represents."

"Then you admit that the fraternal do some good in the world."

"Most assuredly, I admit it and bid them God speed in their good work."

"Then why do you old liners fight the fraternal so?"

"I for one do not fight them. There is no comparison between them and our system and therefore should be no rivalry. Each has its place independently of the other. There are thousands of poor workingmen who cannot possibly buy the best policies because they cannot afford it. But they can buy a fraternal policy that costs but a small amount a month, which is good protection while it lasts, and has brought comfort to many a stricken home. Homes that we could not reach. Some men cannot buy fine clothes for their wives and children, or ride in fine carriages or even start a small bank account, because it takes all they can possibly earn to provide the bare necessities of life, and it is the same in the matter of life insurance. These men must cut their garments according to the cloth, and while they cannot carry the best policy, it is a blessing that such men can find at least temporary protection in a fraternal society which comes within their reach."

The author of this book has a clear notion of the true functions of life insurance and puts it thus:

"Never buy life insurance as an investment. It is a saving with protection."

This has led him apparently to prefer non-participating, also, for he says of it:

We have written both participating and non-participating insurance with equal profit to the agent and equal satisfaction to the assured. Eliminating the investment feature from the scheme of life insurance and emphasizing the savings and protection as the

CHARLES H. STRAUSS, Gen. Ag't,
200 Fifth Ave., New York

AMERICAN TEMPERANCE SKELETONS.

Examination by the New York Department.

The same fellows who came, unpleasantly, into the limelight two or three years ago in connection with the reinsurance of the Traders Life, an assessment association, in the American Temperance Life, are having another experience of the same sort, as a result of the exposure of the mismanagement of the American Temperance Life, which the examiners of the New York Insurance Department have included in their report of an examination of that concern.

Loans to Officers and Directors.

The department required three mortgage loans to be repaid as follows: \$14,000 to the wife of the president, Frank Delano; \$4,500 to Stacey Wilson, a director and the manager; and \$15,000 to the wife of George W. Godward, a director.

The superintendent also insisted upon the company cancelling a "tape-worm" contract for a "rake-off," entered into November 24, 1907, with the National Security Company, in which (and in a previous contract placed by it), the three persons named were interested.

The company was also criticized for issuing literature containing the following statement, though it is an assessment concern: "This association furnishes insurance on the Safety Premium Plan in accordance with the law of New York."

Orders were also given for the withdrawal of a "free policy" privilege, given to each director under the following resolution, on November 20, 1894:

It was resolved and carried that in part consideration for past services rendered and to be rendered hereafter by members of the board of directors of the association as such, the premiums accruing on the policies carried by them respectively in this association be remitted and a receipt therefor be given to each such member at the beginning of each association year.

The following is a list of directors' policies now in force:

Name of Director.	Date of Issue.	Amt. of Ins.
Frank Delano.....	Dec., 1889	\$5,000
Geo. E. Godward....	Nov., 1901	5,000
Geo. W. Godward....	Nov., 1901	5,000
Stacey Wilson.....	Nov., 1901	5,000
A. A. Hopkins.....	July, 1897	2,000
James H. Pettit....	Nov., 1899	4,000
A. Judson Stone....	Nov., 1907	2,000
W. H. W. Youngs....	Dec., 1889	5,000
Edgar S. Marvin....	Aug., 1893	4,000
Edgar S. Marvin....	Dec., 1893	1,000

The assets were put at \$255,266 and the liabilities at \$155,366. The company does not maintain the legal re-

serve, which accordingly is not charged as a liability.

Also that certain real estate in Newark, acquired by a reinsurance, be sold within six months; and \$7,280.13 advanced the president "for payment on a house which he is building" be returned.

The ghouls are still in office and on the board, however, at last report.

EX-SUPERINTENDENT VAN CLEAVE IMPLICATED.

The big politician, who is implicated in the frauds connected with the merger of the Fraternal Tribunes and the American Home Circle in Illinois, the scandal concerning which was reported recently in "The Chronicle," turns out to be ex-Superintendent of Insurance James R. B. Van Cleave.

According to a special correspondent of the "Chicago Tribune," Van Cleave and his attorney, George W. Kenney, who was also "in on the deal," have been in Rock Island, on their own invitation, seeking to convince the district attorney that their testimony is of such value that they should be permitted to tell their stories to the Grand Jury and thus secure immunity. They are represented as even pleading for the chance. The account runs as follows:

Van Cleave and Kenney came to Rock Island without subpoena. They sought out State's Attorney Magill and pleaded with him to permit them to tell the Grand Jury what they know of the fraternal insurance frauds.

Kenney went so far as to appeal to the State's Attorney's sympathy and pity. He almost wept as he told Magill that, because of his family, he could not bear the disgrace of an indictment.

But Magill turned a deaf ear to all the entreaties and when Kenney became too insistent he was asked to leave the prosecutor's office. The State's Attorney plainly told Kenney that he would not be permitted to go before the Grand Jury upon any condition whatever.

And Van Cleave was told that he need not return to Rock Island unless he would come prepared to furnish the Grand Jury with certain evidence

which the State's Attorney regards as of sufficient weight to insure the conviction of a number of men after the indictment.

It is said that the Grand Jury now has evidence tending to show that the insurance swindlers made at least \$200,000 out of the merger of the Fraternal Tribunes and the American Home Circle.

The State's Attorney is so sure of his case against the accused men that he will not receive the testimony of any suspected person excepting upon the terms dictated by the prosecution.

The sudden influx of voluntary witnesses has put Magill on his guard.

The scheme was similar to that which was attempted in the People's Mutual affair at Syracuse, recently frustrated by Superintendent Hotchkiss, i. e., the officers were paid to resign and the looters reimbursed themselves, with a handsome rake-off, out of the reserve funds.

Facts concerning similar frauds in connection with the merger of the Independent Order of Mutual Aid with the American Home Circle are also coming out, the same parties on one side being involved. And the operations of another "band of merger manipulators" which missed fire, are being exposed.

Meanwhile, how long before there will be proper merger laws with suitable safeguards?

The Commercial Life Insurance and Casualty Company is being organized in Savannah, to be capitalized at \$200,000.

JOHN C. PAIGE & CO.

INSURANCE

65 KILBY STREET

BOSTON

I notice that a number of agents are making changes from the Companies they were formerly with to other Companies. Also, that none of these agents have been in correspondence with the Philadelphia Life. Perhaps it is due to the fact that they do not read our advertisements, and I think that it would pay the agents, whether they are working for this company or not, to read these advertisements, as many a time there appear in the advertisements little arguments that would help them to secure business. For instances:—How many agents to-day are using the argument that they are insuring income, which is really what you do on every policy that you have caused to be issued by a Life Insurance Company? Now why don't you get in touch with the new up-to-date income policy of the Philadelphia Life that is different in all details from that issued by any other Life Insurance Company? Write Perry to-day.

"LIFE INSURANCE AND EXPENSE REFORM."

A comparison of the extravagant and wasteful methods of life insurance management in 1900 and 1909, a ten-year period, affords a gratifying view of what has been accomplished by the leading companies in the way of reform. This comparison will be sufficiently indicative of results if we consider for each of the years named the companies whose exhibits are found in the New York insurance reports. Whether we compare the expense of management with total income or with premium income we see clearly the trend in ten years of the expense reform, for 1900 about fairly indicates the record made for several years down to 1905.

Taking the former year, we find that the total income of the companies reporting to the New York Department was \$392,358,740, and that the expense management was \$94,782,023, or 24.20 per cent. of the income. In 1909 the total income was \$691,059,558 and the management expense \$130,470,816, the percentage of expense to income being 18.87 per cent. or a difference in favor of 1909 of 5.33 per cent. If the 1900 percentage had prevailed in 1909 the income would have been depleted by nearly thirty-seven millions, to be exact, by \$36,856,510, which is a good deal of money. For both years we have included in management expense all expenditures other than for payments of all kinds to policyholders and their beneficiaries, for annuities and loss on sale or maturity of the ledger assets.

* * * * *

All this of course means a lower cost to the policyholder, but it means much more. It means a better and more stable class of business, for no longer do the reputable companies employ the spectacular business-getters of the former times, at enormous commissions and extra bonuses, to exploit the field for volume, with the result that fully half the terminations each year from all causes were from the lapsed business that was procured by drum-beating and expensive methods. Reliable men of integrity and square dealing with the insured, as a rule, now represent the companies in the field at a reasonable expense and they are building for the future with reliable material and not with illusive promises and windy stories. It is true that there are still adventurers in the field working their confidence games for present gain, but their day will be a short one, for the results of sane, economical and honest management as placed before an intelligent

public by the reputable companies are fast differentiating between delusive, high-pressure methods and the methods of legitimate life insurance protection which promises only what it can and does perform.—"Underwriters Review," Des Moines.

NEW YORK'S NEW LAWS.

Of the ten insurance bills passed by the recent legislature of New York three have been signed by Governor Hughes and the remaining seven are under consideration by him during the thirty days' period allotted.

The three bills signed were:

The fire and marine bill which amends the reinsurance reserve law and also some minor changes in section 25 relating to foreign corporations, section 110 relating to incorporation, and section 121 which amends the standard fire policy.

The co-operative live stock bill which is a law. It prohibits the incorporation of any more live stock insurance companies under the co-operative law.

The town and county co-operative fire bill which places town and county co-operative fire companies under the jurisdiction of the Superintendent of Insurance.

The seven bills under consideration are:

The bill providing for standard health and accident provisions.

The bill amending section 1, providing that a stock corporation must have at time of incorporation a surplus equal to 50 per cent. of its capital. The bill also changes the deposit provisions so that the deposit with the Superintendent of Insurance can only be made in Government or municipal bonds. It also provides for examination of insurance corporations other than life once in five years.

The bill amending section 70, which is the section governing the different purposes for which insurance companies may be incorporated. This provides among other things what companies insure against loss by automobile damage, live stock, fly wheels, use and occupancy under the steam boiler act and enlarges the field of surety bonds.

The so-called combination standard fire policy bill which permits underwriters' policies to be approved by the Superintendent of Insurance.

The so-called Lloyds bill which gives the Superintendent of Insurance more supervision over organizations of Lloyds.

The bill amending the non-forfeiture law, applying to life companies providing for automatic extended insurance if the policy itself does not direct what option shall become operative in default of selection by the policyholder.

The bill amending sections 96 and 97 permitting companies to increase the volume of life companies' annual new business above \$150,000,000 in such percentage as their economy of administration permits. Section 97 is amended to remedy some of the defects on account of the decision in

the Travelers case and also it permits compensation to agents in the form of Nylie.

A PERSONAL VICTORY.

The stockholders of the Dutchess Fire Insurance Company met at Poughkeepsie on Tuesday and re-elected all the old directors except Public Service Commissioner James E. Sague. Frank B. Lown was elected in his place. Mr. Lown is the man through whose efforts the Dutchess Insurance Company, predecessor of the Dutchess Fire Insurance Company, was saved from bankruptcy at the time of the San Francisco earthquake.

Lewis H. Vail, whose removal as president of the Dutchess Fire Insurance Company, was demanded by Superintendent Hotchkiss, was re-elected president. Milton H. Fowler, legal adviser of the company, was re-elected vice-president. Frank B. Lown was put on the executive committee in place of S. H. More.

Mr. Sague was the only director to side with Superintendent Hotchkiss in his demand for the removal of President Vail. His decapitation is the logical sequence of his opposition to the directors and stockholders who supported President Vail in his contest with the insurance department.

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)

Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

A CLEVER BOOK FOR LIFE AGENTS.

(Continued from Page 5.)

dominant features should be and doubtless is the true purpose of the management of both plans. Whatever disappointments the holder of an old line policy may meet at the maturity of his contract is chargeable to the agent rather than to the company. In the matter of either annual or deferred dividends, the mutuals have made such an excellent showing as to evidence great executive ability and splendid honesty, but nevertheless, it is true that the life underwriter who sells his goods on the investment feature, and places investment above protection, is seldom found carrying the rate book of a non-participating company. The reason for this is not found in the management or plan of either system, but lies in the head of the agent alone. A participating policy is as valuable and will prove as satisfactory to the policyholder as any insurance on the market, if it is sold right, but it must be admitted that the scheme of estimated dividends affords large opportunities for misrepresentation which disappear under a guaranteed dividend table plainly printed on the policy and is entirely eliminated by a non-participating contract.

"The Chronicle" finds it queer* that so discerning a mind could find anything honest in the contradiction, "guaranteed dividends," which the more conscientious commissioners have been putting under the ban because itself a flagrant misrepresentation and leading to other evils, yet more reprehensible.

Mr. Edwards strongly advises insisting upon a settlement with the application and gives many clever pointers about how to get it. The following, however, concerning handling "backsliders," after settlement, is still better:

One of the most trying things that come our way is that of the man who signs up, settles for the policy and then backs out before he takes the examination, and it is right there that the agent's patience and ingenuity are put to the greatest test. Either he has the work to do all over again, and is doubly handicapped by the new opposition of the applicant, or he may return the premium with a smile while inside he is swearing like a pirate.

The better way, however, is to treat it as a purely business transaction and a closed incident. Before going to see the backslider get your ammunition ready. Go to the postoffice and buy a postoffice order for the full amount of the premium and send it to the home office. Take the receipt with you and call on the man and put into your face all the sympathy you can summon, if you have to borrow a supply from somebody for the occasion. Tell him that you are mighty sorry, but that you have already sent the money to the home office, and show him the receipt; that as much as you would like to accommodate him it is too late. That the only way under

the sun that he can get his money back is for him to take the examination. If he is not insurable he won't get a policy, and to look at the binding receipt which you gave him, that provides for a return of the money if he is rejected. Put your doctor onto him, and above everything else see to it that the home office has the whole thing in detail. If he is foxy enough he will at once decide to fool 'em by so answering the questions at the examination as to assure a rejection. You are right onto that scheme, and it is up to you to have a heart to heart talk with him along the line that any false answer to the examiner which he may make, will certainly be discovered, and that the courts would doubtless construe such false answer as an attempt to procure money under false representation and that is a penal offense punishable by fine or imprisonment or both, at the discretion of the court. This line of argument on your part is perfectly legitimate. You did your work honestly; sold him a good policy and are entitled to your compensation, even if you have to scare the stuffing out of him to get it. Of course you go over again the value of protection and use all the arguments at your command to reconvert him, but if he is obstinate, determined and inclined to be ugly, smilingly bid him goodbye, hang onto the dough and let him whistle. If he goes to talking about having been beaten and is creating a bad impression in the neighborhood, tell the people just what happened; your helplessness in the matter, and they will decide with you every time. If you emphasize the fact that every man ought to know his own mind and that you are in no wise responsible for such weakness, every mother's son of them will agree with you.

The following tribute to the insurance press is the more valuable because it comes from a fieldman who is both wise and frank:

It is difficult to estimate the value to the field man to be derived from the various insurance journals published in the country. Every life insurance man should subscribe for as many of the insurance periodicals as he can find the time to read and the money to pay for. You will find something in every issue that will help you write an "ap" and the money is well invested.

OIL AND WATER.

The committee of fifteen appointed at a general conference of the leading fire insurance companies about ten days ago to devise some action to relieve the rate war apprehensions has held several sessions which are reported as being rather devoid of promise.

The committee was made up of five each from the union, non-union and neutral forces for the tentative purpose of devising a new working organization. The Eastern Union has not made good. Its days are numbered and unless some organization is effected there is sure to result a rate war that will make previous ones seem like a pleasant dream.

Each representative of the Eastern Union, the Insurance Information Exchange and the non-affiliated companies, recognizes and admits that there should be a general reduction of expenses in the New England and middle States. There is no unanimity as to the method of reduction. The Eastern Union representatives suggest that a flat commission of 15 per cent. be paid all round. Another interest suggests a flat commission of 30 per cent. Another wants 25. Still another wants to split the difference between 20 and 15 per cent. and make it 17½ per cent. Then there are those who want to pay contingent commissions, while others assert that they will not join a body which does not pay graded commissions.

All of which indicates a singleness of aim, considerable confusion and that history regarding fire insurance repeats itself. In the meantime, the Eastern Union is slated to go out of existence on June 20. It is thought that somebody, before that time, may be able to draw up an instrument which a majority of the companies interested will sign.

THE NATIONAL LIFE U. S. A. Wants Good Producers for District and General Agents

A SPLENDID CHANCE

to grow with a Western Company more than forty years old, operating in thirty States and Territories.

WORK FOR YOURSELF!

We have a Special Proposition for 1910. Why not write us?
CHICAGO'S OLDEST AND STRONGEST COMPANY

Robert D. Lay, Secretary, 159 La Salle Street, Chicago.

Will They Cohere?

Chicago (Special.)—Viewed from almost any point, the organization at Chicago last week of the Western Insurance Bureau is of exceeding interest. Whether the forming of this organization with thirty-one non-union companies as members at the start is to prove one of the most important events in recent fire underwriting history or a mere flash in the pan will depend upon the fidelity of its members. That thirty-one non-union companies can agree upon several important points will be a revelation to those who, judging from the past, had concluded that no two of them could agree upon any one point.

The membership of the new organization may be divided roughly into four classes of companies, as follows.

Seven companies with Western departments—American, Connecticut, Firemens, Germania, Security, Williamsburgh City and the Prussian National, whose United States headquarters is at Chicago.

Four Eastern companies which handle the West from their home offices—Agricultural, Camden, National Union and Spring Garden.

Twelve companies which are handled in three "fleets" by Western general agents—Delaware, Reliance and Rochester German, managed by O. C. Kemp, of Chicago; Boston, Michigan Commercial and Old Colony, managed by A. D. Baker & Co., of Lansing, Mich.; Farmers and Merchants, German American of Baltimore, State of Pennsylvania, Union of Philadelphia, Jefferson and Western of Pittsburg, managed by Montgomery & Funkhouser, of Chicago.

Eight Western companies—Concordia, Milwaukee Fire, Milwaukee Mechanics and Northwestern National of Milwaukee; American National, Dubuque, German of Peoria and State of Illinois.

Officers are as follows: Chairman, E. G. Halle, Western manager Germania; vice-chairman, Neal Bassett, Western manager Firemens; secretary, George H. Batchelder, assistant manager O. C. Kemp general agency; treasurer, Harold W. Letton, United States manager Prussian National; executive, relief and grievance committee—Charles E. Sheldon, Western manager American; J. J. McDonald, Western manager Connecticut; W. M. Patton, president Northwestern National; F. M. Gund, Western manager Williamsburgh City; M. L. C. Funk-

houser, Montgomery & Funkhouser general agency.

The Objects of the Bureau.

The prime object of the organization is to fix maximum commissions to local agents outside of the "excepted cities." Other subjects to be regulated are agency expense allowances, which will be restricted to postage and exchange, adjustment of small losses by agents, collection of balances and credit to be allowed agencies. In addition to these objects the bureau will undertake publicity and educational work. Rate making will not be taken up, as the inspection bureaus already have that well in hand.

The commission scale, it is understood, will follow that of the Western Union—15, 20 and 25 per cent.—except that bureau companies will pay 20 per cent. on mercantile stocks, for which union companies pay only 15 per cent. The bureau scale is exactly that of the Firemens of Newark.

The Northwestern National's Surprise Party.

In connection with the organization of the Western Insurance Bureau there were several surprises. Perhaps the greatest was the coming in of the Northwestern National of Milwaukee. If there has been one company more non-affiliating than all others it has been the Northwestern National. Of late years the Milwaukee Mechanics has not been far behind it. Another surprise is that the Glens Falls is not in. Few, if any, managers in the West have apparently been more desirous of an organization on broad lines than has Manager J. L. Whitlock. He would not consider joining the Western Union, but wanted an organization of all the companies that desire to do business in a legitimate way. He objects to the 20 per cent. commission on stocks and is said to have made a further condition that he would come in if all of a certain list of companies he named would, and not all of them have done so. His staying out has caused considerable irritation on the part of some of those who have joined.

There are about 125 non-union companies doing business in the West, so the membership of the new bureau on the start is but a small minority, but additional members are expected at once. It is noticeable, however, only a few of the large number of companies which have not

joined are active and important agency companies over a large field. Some are specialty companies, a good number operate only in a limited field and most of the others are either so small or so conservative in their underwriting policy that they are of little value to agents. But few non-union agents in the West could do a large general business without the representation of several of the companies already in the bureau.

Recognized the Gravity of Existing Conditions.

That the organization was formed is sufficient evidence of the fact that prominent non-union managers are impressed with the gravity of the present situation and prospects. Several of them have in the past belonged to the Western Union, but withdrew. They all withstood the pressure to join that organization when the Continental unionized. Their inability to agree upon any plan of co-operation in the past has been marked. It was no trifling matter that could make so many of them agree now to bury their differences and come together for what they believe to be the good of all. Their inability individually to hold down expenses and still make progress in the face of excess commission competition, and the strong prospects of legislation on the subject of expense have been the chief factors in bringing them together.

Will They Hang Together or Separately?

Before any organization has been tried out it is impossible to tell whether its members will prove faithful to it and whether it contains the elements of permanence. If this bureau has these elements of permanence, there is little room for doubt that it will play a very important part in Western fire underwriting.

Ten years ago when the Western Union began enforcing separation, most of the agencies that did a general business were obliged to unionize in order to handle their lines. The non-union companies of that day were of little value in carrying either mercantile stocks or special hazards. Both these classes were rated too low and most companies lost money on them. Since then they have been rated up where they belong, the non-union companies have grown in size and in liberality of underwriting policy, until non-union agents are no longer handicapped in doing a gen-

eral business. Most of the oldest large agencies in the West are still union, but in ten years many young agencies have grown into prominence and are now more active than the older ones. In late years a number of companies have been doing to the leading non-union companies just what they did to the union companies before the days of separation—by excess commissions they have been buying the cream of the business and leaving the companies which paid only reasonable commissions but wrote general lines to bear the burdens but not get the rewards.

The thirty-one companies in the bureau have it in their power to correct much of this evil. Their best agents must have them in order to handle their lines and they can, if they see fit, force these agents to resign their excess commission companies or agree not to accept excess commissions on pain of losing their really valuable companies. It is some such plan as this that is to be put into operation, first in a few States and then throughout union territory, unless the laws forbid in some States.

Time Only Can Tell.

As to whether it was wiser to organize this bureau than for these companies to have joined the Western Union is a question on which there is plenty of room for difference of opinion. Presumably union members believe one organization better than two with similar objects, and theoretically they are right. But, if these companies can accomplish for themselves the same ends through the organization as they would have done through the union, they have effected a vast saving in work, in loss of business, in hardship upon agents and in possibilities of rate wars by going by themselves and not forcing a reorganization of a large per cent. of the non-union agencies in the West.

Relations of the Western Union and the Bureau.

This new move brings up important possibilities as regards the relations between union and non-union companies. In the past the Western Union has been the only general company organization in the West. It took the initiative in every movement in which all companies were concerned, and it generally dictated what should be done, for there was nobody representing the non-union companies with which it could hold negotiations. The governing committee has indicated the policy of the union field organizations. They conferred with the non-union field clubs, but had no power to agree to anything not according to their instructions from above. The

governing committee could not treat with the non-union field clubs for they had no power to bind their companies, nor could the union managers stultify their own field men by dealing with non-union field men as if they were of managerial work. Accordingly co-operation among field organizations practically amounted to the non-union clubs accepting the dictates of the governing committee of the union.

The Outlook Appears Generally Fair.

Now the union will have a body of its own rank to deal with on matters of general interest. If it grants relief rates the non-union bureau can do the same. When it voices the union sentiments regarding inspection bureaus or any other subject, there will be a body to voice the non-union sentiments also. There are chances for much more effective co-operation than in the past and also for sharper clashes, if the two bodies do not agree.

However, regardless of any possibilities for trouble, the organization of the Western Insurance Bureau is a subject for profound congratulation. It means more effort to reduce expenses, to stop abuses on the part of agents, to drive into a corner the parasite class of companies that bribe the agents to give them the choice business to which the companies that carry the less desirable risks are fairly entitled.

MAY FIRE LOSSES.

According to the figures given out by the "Journal of Commerce" fire losses for May were \$18,823,000, nearly a million and a half increase over last year. Total losses since January \$86,045,300, against \$89,367,100 last year and \$105,985,150 in 1908. These figures might be some slight comfort were it not for the fact that rates in numerous instances had been lowered thus disturbing the loss and income average ratios.

THE SURETY ASSOCIATION.

The Surety Association of America, which is composed of the executives only, held a meeting at the Hotel Astor, this city, yesterday, and gave its attention to the amazing situation presented by the clear sky thunder-clap from the Massachusetts insurance department in demanding a \$100,000 deposit in that State under a mysterious discovery and re-interpretation of the law.

No action was or could be taken on such short notice, but the association was evidently much agitated and there is little doubt but that some vigorous action is impending.

INSURANCE IN FORCE
FIFTY MILLION DOLLARS

IN NEW ENGLAND

UNITED STATES FIDELITY & GUARANTY BRANCHES OUT IN MASSACHUSETTS.

Availing itself of the provisions embodied in a law enacted this year in Massachusetts, the United States Fidelity and Guarantee Company has been licensed to transact steam boiler, fly wheel, accident and liability and plate glass insurance in Massachusetts, in addition to the lines it had already been authorized to write, namely, bonding and burglary insurance. The extension of the company's authority will doubtless mean a substantial addition to the business of Messrs. O'Neil and Parker, its Boston representatives.

Taking Time by the Forelock.

Anticipating the possible enactment of workmen's compensation acts in a number of the States of the Union, the Travelers Insurance Company of Hartford has taken time by the forelock by issuing a policy based upon the workmen's compensation requirements in force in Great Britain. This in addition to the requirements of the present employer's liability laws, and, as a consequence the rates are somewhat higher than those in force for plain liability policies.

Wants a Hearing.

Being of the opinion that the Civil Service Commission did not exercise proper care in examining into his qualifications, when it failed to approve of his nomination as fire commissioner of Boston, Mr. McCarthy, surveyor of the port of that city, has stated that he will appeal to Governor Draper for a public hearing on the matter. Should this be granted, it is likely that some interesting interchange of opinion may ensue between accuser and accused. Meanwhile the fire department of Boston gets along as best it can under the able leadership of Chief Mullen, and with Attorney Carroll as acting fire commissioner.

New England Brevities.

A movement is on foot, and is being actively pushed by prominent members of the New England Insurance Exchange, for the adoption of a form for farm property insurance, similar to that now in use in New York State.

The committee on insurance of the Massachusetts Legislature has reported in the senate a bill to incorporate

the Independent Companions of America, a fraternal insurance order for working women.

John W. Talbot, of South Bend, Ind., president of the Order of Owls, has instituted injunction proceedings against the Massachusetts nest of the order, seeking to restrain it from representing itself as a member of the order or doing anything else which might lead to identification therewith. It is also sought to prevent the defendant from circulating any stories alleging misuse of funds by the supreme officers.

The annual outing of the New England Insurance Exchange is to take place on the 17th inst. at the Pomham Club, down on Providence river, the same place which provided such delightful entertainment to the field men last year. The exchange meetings for the summer months will be held on these dates—June 18, July 23, August 20—while the regular meetings will be resumed September 24.

UNIFORMITY WITH A VENGEANCE.

The Supreme Court of Virginia has held a restrictive clause in a life policy of no effect because printed in type not "as large or larger than long primer." The latter-day underwriter has developed new lines of contest because the printers have new plans and machines, necessitating the adaptation of the old to the modern conditions, and the printers now use the so-called "point system" for measuring the size of type. An inch is divided into 72 points and type is designated according to the number of points contained in each line. Thus long primer is the old fashioned name for 10 point type. That is, there are 72-10 lines of long primer to the inch, each line containing ten points.

IT IS TO LAUGH.

Texas passed an act creating a fire rating board for the purpose of spanking the companies rates and the board has been so very active that instead of performing the expected spanking the rates have been raised 400 per cent. in some instances and that has raised—well, a reminder of the famous Seward message to Sullivan.

Now, Governor Campbell is all "het up" and avers that if the board does not promptly put the rates way down when it meets on the 21st inst., he will call a special session of the legislature to repeal the law.

This is amusing to the companies, as well as instructive to the people of Texas, and illustrates the inevitable results of monkeying with a gun that was not known to be loaded.

Another Laugh.

The new insurance commissioner of Texas, William E. Hawkins, has "caught" the Glens Falls Fire with a single risk of \$100,000 and has notified it to reduce to \$20,000 or get out of Egypt a la Roosevelt, to John Bull. He also found a single \$50,000 risk on the person of the Globe and Rutgers and notified it to reduce to \$40,000 or accept its passport to the Lone Star State line.

The reinsurance offset on these risks counts for naught with this fresh wielder of the broom. It's do or skidoo.

The Glens Falls has only \$5,105,506 assets and the Globe and Rutgers has only the bagatelle of \$5,177,134, not sufficient for the great State of Texas, says "Mr. 'Awkins, sir."

Governor Campbell would do well to call his legislature together if only for taking this laugh off his State, even if the other one remains.

Sam Wassell of Little Rock has been appointed state agent of the Great Eastern Casualty Company of New York.

TO MAKE LABOR SAFE.

Industrial accidents and diseases, which with the kindred subject of workmen's compensation have occupied a good deal of the time of the recent meetings of such bodies as the National Civic Federation and the National Association of Manufacturers, will be considered in three national conferences, to be held to-morrow and Saturday at the Auditorium Hotel, Chicago.

The first of these conventions is that of the National Conference on Industrial Accidents and Workmen's Compensation. The chairman of this is Charles P. Neill, Commissioner of the United States Bureau of Labor, and among the members will be the State commissions, which have been appointed to consider this matter in New York, New Jersey, Wisconsin, Minnesota, Illinois and Ohio, and official delegates nominated by the Governors of States.

This is the third meeting of the conference, the others being held in Atlantic City last July, and in Washington in January. Its published proceedings include reports from the State commissions and criticism of tentative bills. There will be present at Chicago, Senator Wainwright, Professor Seager, John Mitchell and Miss Crystal Eastman, of New York; Frederick Hoffman, of Newark; Senator A. W. Sanborn, of Wisconsin; H. V. Mercer, George Gillette, and William McEwen, of Minnesota, and Edwin R. Wright, of Illinois, besides representatives of manufacturers' associations, trade unions, insurance companies and the Russell Sage Foundation.

The second conference will consider the diseases which result from certain kinds of employments. It is reckoned that they cost the country each year in the expenses of sickness, loss of wages and of economic loss to industry not less than \$1,250,000,000. Yet recent investigations have shown that they are in large measure preventable. Thus in Europe such poisons as yellow phosphorus have in many instances been given up in favor of harmless substitutes.

Dr. Henry B. Favill, president of the Chicago Tuberculosis Institute, will be in the chair, and among those giving addresses will be Prof. Charles R. Henderson, of the University of Chicago, and Secretary of the Illinois State Commission on Occupational Diseases; Dr. John B. Andrews, of New York, author of a Government report on "Phosphorus Poisoning in the Match Industry"; Profs. Henry W. Farnham and Irving Fisher, of Yale; Frederick L. Hoffman, statistician of the Prudential Insurance

Company, and Dr. Alice Hamilton, of Hull House, Chicago, secretary of the International Congress on Industrial Hygiene.

The American Association for Labor Legislation will also meet and will elect delegates to attend the International Congresses on Industrial Insurance, Occupational Diseases, Unemployment and Labor Legislation, which are to meet in Europe in September. Among the members of this association are: Louis D. Brandeis, of Boston; Miss Jane Addams, of Hull House, Chicago; Prof. J. W. Jenks, of Cornell; Ernst Freund, of Chicago; John M. Glenn, of the Russell Sage Foundation; Seth Low, Rowland Hazard, of Rhode Island, and Frederick Judson, of St. Louis.

THE BURGLARY SITUATION.

The Burglary Underwriters Association of America has actually passed a month without an acute attack of intermittent fever and is now looking for a secretary. As usual the matter of salary is of widely varying opinions. The economist with his penurious ideas, and the broad business man who knows from experience that the best is the cheapest, and that it comes high, are at issue.

The former wants a clerk and the latter wants a type of Seward, Lott, Stone, Alexander, Joyce and that long list of doers of things, and both sides are now out with their telescopes looking for a star—one from the cellar and the other from the roof.

A PROFESSIONAL SWINDLE.

That was a good catch on Monday when the Alliance Against Accident Fraud landed one of the post-graduates in accident swindling in the Tombs on charges of grand larceny.

The prisoner is Mrs. Anna A. Strula, of Hazlet, N. J., age 45, a widow, good looking and of excellent address. She was indicted last week for the larceny of \$500 from the New York Central. F. L. Arnold, secretary of the Alliance collected the evidence on which the indictment was returned.

According to Mr. Arnold the woman suffers from a chronic ailment and she has been using this affliction as her stock in trade in each case, claiming that the injury had resulted from the carelessness of the companies which she picked out for her victims. Sometimes, but not often, she would allege that she had been hurt by a jar, due to the sudden stopping of a train or car, but in a majority of instances banana peels or grape skins would be found under her after she had been picked up seemingly in great pain, after a fall. Negligence in leaving such slippery things on stairs or platforms would then be made the basis of her suit.

\$1,000 from Pennsylvania.

So far as Mr. Arnold's investigations show Mrs. Strula began getting hurt on June 16, 1906, when she brought suit against the Pennsylvania road. This initial venture netted her \$1,000 on a compromise, and, inspired apparently by her success, she proceeded without loss of time to file more claims.

In addition to the \$1,000 from the Pennsylvania and the \$500 from the New York Central it is set forth that she collected, always under settlement of court, \$150 from the Central of New Jersey, \$250 from the Reading, \$300 from the Erie, \$50 from the B. R. T., \$250 from the Reading, \$150 from the Lackawanna and \$150 from the Casualty Company of America on account of a case against R. H. Macy & Co. Other suits are still pending.

Over-Confidence Her Undoing.

Over-confidence seems to have led to her undoing. When her second suit was filed against the Pennsylvania the claim department at Philadelphia showed her that she had already collected one claim for damages on an exactly similar basis. When the claim agent went further and showed her records of some of her other suits she decided to drop the second action and promised to get out of the State of Pennsylvania and never come back.

She also saw her way clear to an immediate abandonment of her suit against the Lehigh Valley when confronted with one or her sworn petitions stating that her alleged injuries dated back to a time prior to the date when she said she fell on a Lehigh Valley train.

Hazlet made a convenient headquarters for the litigations Mrs. Strula, for it was a quiet suburb within easy distances of New York, Philadelphia, Brooklyn and the principal cities of New Jersey. Her suit against the New York Central, and the one which forms the basis of the indictment against her, was begun after she had tumbled down the stairs of the Harlem station at One Hundred and Twenty-fifth street and Park avenue. An orange peeling was found where she fell, and she was carried to a hospital apparently in a serious condition.

After her discharge from the hospital she filed suit on the ground that she had suffered a permanent injury. An attorney for the road paid her \$500 as a compromise in the Hotel St. Denis, and because the whole transaction occurred in this county the district attorney elected to have her indicted for this alleged fraud.

An Object Lesson.

This indicates the possibilities of the Alliance Against Accident Fraud in prevention of fraudulent claims. There is a surprisingly large number of these professionals who make a regular business of getting hurt, and it is only by a central co-operative bureau of information that their itineraries can be kept up with. This is what the alliance does, but at present only in a limited way, because of lack of sufficient financial support to establish a thoroughly comprehensive reference system covering the entire country.

It deserves the cordial support of the casualty companies, railway and manufacturing concerns, and, in fact, all responsible interests that have been or may be made the subject of attack.

At the forthcoming convention of State insurance commissioners an effort will be made to attach what is known as Schedule N to blanks for fidelity companies. These officers will then be compelled to give their classification on 120 different kinds of business. The assigned reason for this action is that it will provide the commissioners with a proper basis for reserve making. It is surmised that its real intent is to suggest rates.

CHICAGO'S AUTO DEATH TOLL.

All Chicago stood aghast as the grim record of the death dealing automobile toll on the city's streets for the month of May was given out by the police department to-day.

The list of killed and injured mounted higher than for any previous month in the city's history. Steadily it has climbed, despite laws and ordinances and the efforts of police authorities to force automobilists to respect the lives of others, until the speed mania chauffeurs last month made a record of six killed and eighty-five injured. To offset this is a record of one chauffeur held over to the Grand Jury charge of manslaughter.—Chicago "Daily News," Saturday.

MILLER BUSY.

It is understood that the Continental Casualty is soon to secure a man to look after its commercial accident department in the downtown district of Chicago and will push that branch of its work in its home city. The company already has a downtown office, but it devotes its time largely to industrial business, getting such commercial business as comes to it naturally. The company has started a campaign of daily newspaper advertising, in charge of Chauncey S. S. Miller, formerly secretary and treasurer of the Casualty Company of America.

A CASE OF FORCED DEFENSE.

For several years "The Chronicle" has pointed out that the successful casualty company of the future must of necessity cover all lines in order to compete effectually. The Fidelity and Casualty afforded the model object lesson. Its extended operations have always given it a powerful advantage over its dull rivals who could not see an inch beyond their noses.

But the great light has dawned upon them at last and the morning of the new era is at hand. Some have cheerfully accepted the inevitable and shouldered arms; others are still clinging doggedly to their own opinions, either because of incapacity to navigate the new waters or because of brute stubbornness. However, they are losing in the race and it may be too late to catch up when they do awake.

It is refreshing to follow President John T. Stone in his characteristically clear and equally frank statement of why the Maryland Casualty added fidelity and surety business to its writings. He says:

* * * * The business or corporate suretyship has greatly increased in volume during the intervening twelve years, but there are only a few classes or forms of bonds now written which were not issued then. The number of companies engaged in the business in a general way now, is fully double the number in 1898, not to mention the numerous companies doing a limited class of business in a small territory.

The usual result of a multiplication of companies—unwholesome competition rates—was, during the past decade, carried to the extreme point, so that it became a matter of common talk that more than one surety company was on very thin ice financially.

Within the past two years the surety companies have brought about among themselves a marked improvement in the conditions under which their business is transacted, so that at this time the imminent dangers which threatened some of them appear to have been averted. The man in the street might naturally assume that there would be entire content in the enjoyment of this change for the better, and a positive unwillingness to invite, for a long time at least, either new troubles or a return to those so recently escaped.

Mr. Stone lets the family closet door open and exposes the skeleton, which has for so long been concealed, in paying his respects to his surety neighbors of Baltimore in this wise: (It will be remembered that this revolution began there.)

There are some people, however, who cannot stand real prosperity, but must always live in the fool's paradise which deludes those who move in an automobile world on a pushcart net income. About the beginning of

1910 the little bird which keeps busy carrying advance information began to whisper that some of the surety companies were going into the casualty business also; and soon it was definitely announced that such was the case. It at once became evident that the advance in the casualty field of these additional employers of agency and home office personnel might render defensive measures on the part of those already in that field highly necessary.

Hence the Maryland has decided to add a fidelity and surety department to the branches of business we are already transacting, as the most effective, the most practical, and the least dangerous defensive measure it could adopt.

Highly Strained Family Relations.

The strained relations between the Maryland companies was highly accentuated by the resignation of Seymour Mandelbaum as vice-president of the Maryland Casualty. It was stated that this was due to the fact that he was also vice-president and chairman of the executive committee of the Fidelity and Deposit, which proposed to become a formidable competitor, and it would be inconsistent for him to hold both. But that little bird referred to by Mr. Stone whispers an entirely different reason and it is fair to assume that Mr. Stone's remarkable success has aroused not only the jealousy but also the cupidity of some of his quondam friends, so-called, but who are friends of no man and whose pledges are only made to be broken. And so there is to be war to the knife.

Nobody doubts the strict intent of Mr. Stone's conclusion:

* * * * Notwithstanding our establishment of this department was not, in a sense, voluntary, but was brought about by circumstances beyond our control, yet, being established, it will be developed and administered with absolute and unqualified purpose to make it an eminent success.

Condition General.

The same general condition as that which confronted Mr. Stone prevails with every company, although some shut their eyes and refuse to see it. Exactly what forced the Maryland to act—and act promptly—must compel all companies of any weight or consequence to do likewise, if they expect to be in the running, not only out of consideration for their agency staffs but as an economic measure. Mr. Stone will operate his new department at an expense ratio probably less than half that of other companies, because of his splendid and efficient home office and agency organization, necessitating practically no appreciable increase.

It is unreliably reported that the

Casualty Company of America will follow the Maryland's lead into the surety camp. The National Surety is preparing to follow the lead of the United States Fidelity and Guaranty, and the Fidelity and Deposit into the casualty camp. Thus the merry dance goes on.

The small new companies are negligible in this titanic contest. They are in a plight and state of helplessness that is pitiable, and their only hope is to find shelter while there is yet time. There seems even slight hope of consolidating enough of them to make a real strong concern. There are too many officials to be cared for. None is willing to retire, hence the case seems hopeless and the future of this small craft involved in grave apprehensions.

The rate for automobile collision insurance in Chicago is now 4½ per cent., including fire and all other features, and it is estimated that at least a 5 per cent. rate is necessary, by reason of the excessive losses in that line. Some of the more conservative companies decline to write this hazard, claiming it is productive of more loss than all other automobile hazards combined.

VOLUNTARY COMPENSATION FOR ACCIDENTS.

The old reproach that corporations are soulless seems in a fair way of losing its edge, judging from the attitude that some of the largest and presumably most soulless of them (if there are degrees of soullessness) are adopting toward their employes nowadays. Of course, it may be a matter of dispute as to whether soul development or an increase of long-headedness has been the moving cause of the new policy of voluntary compensation to injured workmen and pensions to aged ones, but most people at any rate will probably agree that the effect must be conducive to a certain peace of mind on the part of many men to whom the day's work holds an ever-present possibility of disabling accident or sudden death, and who besides have learned from the experience of others that the courts are not very favorably disposed toward the man seeking damages from an employer. One of these recent cases of soul-development is that of the International Harvester Company—the "harvester trust," as it is called—which voluntarily divests itself of the benefit of those barbaric common law defenses known as "contributory negligence," "fellow-servant act" and "assumed risk," and announces that hereafter an injured employee shall be compensated without recourse to law. The scale of compensation runs this way: For the loss of a hand or foot, one and one-half years' average wages, or not less than \$1,500 or more than \$2,000; both hands or feet, or one hand and one foot, four years' wages, or not less than \$2,000; other injuries, one-fourth wages during the first thirty day of disability, or if over thirty days, one-half wages, but not for over two years; thereafter, if injury is permanent, a pension; in the case of a fatal accident, three years' average wages will be paid, but not less than \$1,500 or more than \$4,000. The United States Steel Corporation comes across with an allowance, in the event of temporary disability through accident, of 35 per cent. of the average wage to single men and 50 per cent. to married employes, with 5 per cent. additional for each child under sixteen, and 2 per cent. for each year of service over five; for permanent disability a lump sum is allowed, based on the extent of the injury and the annual wages of the employe; in the case of a fatal accident one and one-half years' wages are paid, with 10 per cent. additional for each child under sixteen, and 3 per cent. for each year of service over five. Of

course, it is well known that a number of railroads also have adopted the policy of providing for the future of employes who, through injury or old age, are incapacitated from work; and it is all very kind and nice, no doubt, but one wishes this type of relief could be less of a gratuity and more of a legal obligation on the part of the corporations, or of the Government and corporations combined. They seem to handle this kind of thing better abroad.—"Electrocraft."

INSURANCE OF AVIATORS.

It is stated that one of our large accident companies has notified its policyholders that it is not prepared to cover risks of accidents to aeronauts, and that it is only prepared to receive the renewal premium subject to the exclusion of such risks from the conditions. At the present time aviation is in the hands of a few experimenters, who are testing the capabilities of various flying machines of a more or less flimsy type. Until the experimental stage is over, we do not think insurance will be taken up in any large way. It appears that at Lloyds the risks can be insured against, and this provision will do for the present. But when aviation becomes general no one will be safe, whether indoors or out, from a descending wreck. From motor cars, and all other monstrosities of the road, we can generally deliver ourselves by keeping to the path, but the old term, "a bolt from the blue," will soon be taking on a very practical and unpleasant meaning. It will add materially to humanity's daily risk of accident, and insurance will come more by its own. But those days are a long way ahead. Candidly, we hope so, on personal grounds.—"Review," London.

A ROYAL ROAD TO WEALTH.

Notwithstanding the adages of the sages there is a royal road to wealth—at least temporary wealth. The secret is to buy, beg or borrow control of a surety company and make it guarantee your borrowings from the banks, a la Knabe's \$115,000 loan from the Metropolitan Trust Company, for which he had his United Surety Company make bond as collateral indemnity.

It is important, however, to follow the Knabe example and avoid making any record of the transaction on the books of the surety company. Then you may have what in vulgar parlance is called a "cinch."

Frank Lock, manager of the Atlas Assurance Company, arrived home from Europe Monday.

READY FOR BUSINESS SOON.

W. L. Taylor, assistant general manager of the Missouri Fidelity and Casualty, which is in process of organization at Springfield, Mo., advises the "Insurance Field" that the company hopes to be ready to be examined for its license by the middle of July. The work of selling stock has not been completed, but the agency force is being organized and policies have been printed in order to show prospective agents what kind of business the company will transact.

Mr. Taylor says that the company has three hundred stockholders, most of them manufacturers, bankers and business men living in Missouri and Eastern Kansas. The authorized capital stock is \$250,000 and S. E. Austin is acting as manager. The president is W. L. Garrett and the secretary J. L. Hine.

The executive committee of the International Association of Accident Underwriters will hold its annual convention at Bretton Woods, N. H., four days, September 20-23 inclusive. Herebefore the annual meetings have been held in July.

ANOTHER RAINBOW.

Colonel Sellers and his splendid eye water scheme, with millions in it, is not without imitators in other lines. A Philadelphia Sellers, named F. T. Crichton, has issued a prospectus for a strike insurance company—the Employers Indemnity, of West Virginia—and it is a gem of its kind. He pins his faith, it seems, to London Lloyds and a namesake of his proposed company of small caliber and Philadelphia. If he has no greater success than several other recent promotions in that city he may have to seek fresher fields Westward for the exercise of talents that are irrepresible.

Mr. Crichton plans a capital of \$500,000 and presents his ambitious scheme in the following enticing manner:

Employers of labor will not hesitate in paying a premium of \$300 per annum for \$30,000 of protection payable at the rate of \$100 per day for 300 working days in the event of a strike. By procuring only 1 per cent. of the 200,000 manufacturers the following results can be realized:

Annual premium income from 2,000 manufacturers	\$600,000
Total losses to be paid by the company, estimating these losses at 200 per cent. above the actual experience of foreign companies—\$180,000. Cost of procuring business, estimated at 100 per cent. above the actual experience of foreign companies—\$240,000	420,000

Net profit annually.....\$180,000

This net profit of \$180,000 will pay a dividend of 20 per cent. on a capital of \$500,000, after allowing \$80,000 to be placed to the company's surplus account. The field for operating the Employers Indemnity Company for the writing of strike insurance is practically unlimited.

A reinsurance arrangement will be entered into between the Employers Indemnity Company and the Lloyds of London and some of the representative German companies to underwrite the surplus business applied for in excess of the limit of liability accepted on any one risk. This will enable an employer to insure his plant for the full amount of his profits and fixed charges.

Colonel Sellers over-figured on sore eyes and perhaps Mr. Crichton is over-estimating on purchasers of his shares of stock, but you never can tell. There's a birth of one every minute.

STRYKER ON VACATION.

H. H. Stryker is taking a trip of recuperation to Europe before taking up his new duties as managing head of the recently created bureau of reinsurance of the Surety Association of America. He has been somewhat run down by the exacting demands

on his time during the past year or so and wants to be fit and ready for the arduous and exacting requirements of the new job in which he will have a dozen or more masters to satisfy.

He has been trying to devise some basis of a plan that will automatically accomplish a satisfactory division of reinsurances between the members of the association. Last year reinsurance premiums amounted to \$900,000, and it will require the wisdom of a near-Solomon to divide this sugar plum in such a way as to avoid some fights in the school yard when a big boy takes a small one's share from him.

Mr. Stryker's plan so far is to base each company's allotment on the ratio of business turned in by each. This looks like trouble to begin with, because the big ones will naturally turn in a volume, while some of the little fellows may turn in an inconsiderable amount of business and possibly none.

Another problem is as to how to placate the companies which do not write certain lines. None of them are uniform in that respect, each having its own method and rule of selection.

Mr. Stryker is wise to train up. He will need it when he takes the wheel.

The suit of Gerald E. Hart in the Municipal Court against the Great Eastern Casualty Company, has been dismissed. The plaintiff wanted \$500 for expert advice on burglary insurance. Louis H. Fibel, president of the Great Eastern, testified that he got the benefit of Mr. Hart's wisdom while he was buying the latter a luncheon one day.

The Income Insurance Company of Austin, Texas, has been chartered. The capital is \$100,000. The incorporators are J. C. Kerbey, T. J. Caldwell and F. M. Covert, of Austin, and T. A. McLean, of San Antonio.

N. A. L. F. I. A.**Goes with the National Association.**

Robert S. Sturtevant, of New York, for the past twenty-five years employed in the shipping department of Hutchinson, Pierce & Co., a large shirt manufacturing company and distributing concern, will enter the service of the National Association of Local Fire Insurance Agents on August 15, as assistant to the secretary. Mr. Sturtevant will have charge of the office work, relieving the secretary of many details and thus enabling him to give attention to other matters of importance to the association and the "Bulletin."

Western Trip.

Secretary Putnam, of the National Association of Local Fire Insurance Agents, will attend the annual meeting of the New York State Association at Utica, June 10, and the Iowa Association meeting at Des Moines, June 16. While in the West he will confer with President Guenther at Detroit in regard to arrangements for the National convention and will also be in Chicago to confer with the local committee on the same subject.

Working on Brokerage Problem.

The joint conference committee has pretty thoroughly canvassed the situation in respect to trust lines and brokers and the agents on the committee will probably soon confer in regard to the matter with a view to considering the situation. Later on there will be a conference with the company members of the committee so that a report can be framed up and presented to the National convention in Chicago in September.

Increased Interest in Agency Organization.

The officers of the National Association are gratified to note that the State meetings thus far held indicate a decided increase in interest in the organized movement. This is especially gratifying in view of the claims made by many that the work of the National association was not being fully appreciated. The fact of the matter is, however, that agents generally are learning to appreciate more and more the value of the organization, and to utilize it more and more as a means of promoting good practice and toning up the general character of the business.

ONE WAY TO A SANE FOURTH.

Now that the mayor has definitely decided to refuse permits for the sale of fireworks a splendid opportunity is afforded the fire insurance companies to do yeoman service in further sup-

pressing the danger by notifying all policyholders that their policies are invalidated under their own terms.

Since the sale of fireworks is thus legally prohibited it is not unlikely that a more or less substantial volume will be sold surreptitiously, and it is therefore important that citizens be informed that the presence of fireworks in their premises would invalidate their policies, stipulation to that effect being embraced in lines 24 and 25 of the standard fire insurance policy of the State of New York.

LIABILITY INSPECTIONS.

More than all the State laws and supervision in America has insurance inspection of dangerous machinery done in the protection of life and limb.

Some of the most dangerous plants have been so safeguarded that accidents are almost an impossibility. A few of the easiest methods of safeguarding machinery is by providing railings for exposed cog wheels, belts and stairways, replacing worn threads on stairways, counter sinking set-screws and by safety devices on elevators.

Two works of extraordinary value on the subject of prevention were recently issued by the Fidelity and Casualty, and the Aetna Life, the leading companies on conservation, in fact the only ones that have developed the principle of inspections and safeguarding to an effective level. These works are of the most vital importance to manufacturers employing dangerous machinery and should be in every manager's, superintendent's and foreman's office.

ILLINOIS SURETY SUED.

The Illinois Surety Company is defendant in a suit instituted by the County of Milwaukee for the collection of a bond of \$50,000. In 1906 this surety company went on the bond of Henry J. Weeks who had contracted to complete a system of tract indices for the county at a cost of \$66,690. Several times Weeks abandoned the work and the county contends that this was a breach of contract for which the surety was liable.

Mrs. Eloise Acosta Greene, the widow of a Southern physician, whose fashionable dwelling in the Flatbush section of Brooklyn was burned on March 16, has been required to furnish \$5,000 bond to answer the action of the Grand Jury on evidence that the fire was of incendiary origin. The proceedings was taken at the instigation of Acting Fire Marshal Brophy, of Brooklyn.

A SPRINKLER TRUST.

The Automatic Sprinkler Company has purchased the Niagara Fire Extinguisher Company, the Manufacturers Automatic Sprinkler Company, the Standard Fire Extinguisher Company and the entire capital stock of the International Sprinkler Company. This practically reduces the competition in the sprinkler line to the General Fire Extinguisher Company, which maintains the Rockwood Sprinkler Company as a subsidiary, and the Automatic Sprinkler Company.

THE GREATEST EVER.

That "94 variety" insurance holding concern so flamboyantly announced some months ago by the Hon. Harry M. Coudrey, member of Congress from Missouri, is apparently playing truant, as it has not put in an appearance as yet, nor has it explained its broken date of entry. The "Hon. Harry" has been having a whole lot of vexation lately by reason of his promotive proclivities.

For instance, note the following news item which is floating around in the insurance press:

Wakefield, Morley & Co., general agents at Hartford, have brought suit for \$100,000 damages against the International Fire of St. Louis for breach of contract to give them the sole general agency for New England. The contract had been made by former President Coudrey, afterward removed.

Mr. Coudrey will probably have a chastened spirit and reduced hat-band before he gets his \$15,000,000 concern going and saving 94 insurance designs, as he has promised. Cases like this, and that of Armstrong, and Van Laningham afford ample study and observation for the psychologist in particular, and all men in general.

ANOTHER ARIZONA PROMOTION.

The loose territorial laws of Arizona have given recent birth to a number of insurance promotion schemes, not a single one of which has yet developed anything tangible except the promoters rake-off as the sales of stock are made.

Now comes the Arizona Fire Insurance Company, capital \$200,000, surplus \$400,000, promoted by the Arizona Finance Company, shares, par, \$1.00, and a premium. Officers: Elliott Evans, president; Lloyd B. Christy, treasurer, and E. E. Forstall, secretary.

These philanthropic gentlemen naively announce that positively the organization expenses will be limited to 20 per cent. of the moneys paid in. That would yield a return to the promoters of the neat round sum of \$120,000, something not to be sneezed at, even in cactus-land.

When Commissioners Hotchkiss, Hartigan, Barry and a few others get on to that 20 per cent. it is quite likely that they will put a little red card in the reference cabinet in their offices, merely to refresh their memory if need be at some future time.

There is in the mind of many business men of vast experience the query as to what sort of mental pabulum actuates the going to Arizona, West

Virginia, Delaware and others for a charter for a concern that proposes a square deal.

WANTED: AN INSURANCE EXPERT.

The committee on insurance of the American Street and Interurban Railway Association met in New York this month for the first time since its appointment. Reports have been received from 98 companies as to their business in 1900, showing a lower average rate and a larger amount of insurance carried than for any year since 1901. It decided to call upon those that had not reported their figures that its statistics might be more accurate.

The committee recommended the appointment of an insurance expert, with authority to employ assistants, to advise the members of the association on all matters relating to fire insurance, including forms, appraisals, schedules, adjustments, reduction of hazards and "the elimination of the payment of unnecessary commissions." Use-and-occupancy insurance, fire drills, central rating bureaus and other topics were discussed.

The Company OF the People, BY the People, FOR the People

PROOF OF PUBLIC CONFIDENCE

This company has more premium paying business in force in the United States than any other Company, and for each of the last 16 years has had more New Insurance accepted and issued in America than any other Company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburg, Baltimore, New Orleans and Buffalo.

LOGARITHMS, SEVEN PLACES.
 Forborne Immediate Annuities.
 Curtate Summations of D Column.
 Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
 Divide temporary insurance values by immediate temporary annuities.

Computing Annual Endowment Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.

Computing Annual Pure Endowment Premiums:
 Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
 By these means, the net extra premium for a special guaranty can be quickly and accurately computed.

Computing Annual Semi or Double Endowment Premiums:
 Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.

Computing Limited Premiums:
 Divide the proper single premiums by immediate temporary annuity.

Computing Surrender Values:
 Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.

Extended Insurance with Fractional Paid-up Endowment:
 Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.

Computing Terminal Reserves:
 Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
 Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
 Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.

Warranted Commissions for New Business.
Surrender Values.
Dividends.
 For these purposes the "select and ultimate" will be most useful.

Trustees of Voting Trust in Equitable Stock Resigned Wednesday—It Is Expected That New Trustees Will Be Appointed Shortly.

Up to the close, on Wednesday of this week, of the five-year voting trust of the stock of the Equitable Life Assurance Society, created by Thomas F. Ryan in 1905, there were many open questions, for instance, as to whether J. P. Morgan, who bought control of the interest from Mr. Ryan and from the estate of E. H. Harri-man, intended at once to mutualize the Equitable, as had been intimated, to continue the voting trust, or to terminate the same and take the management directly.

All of these questions are still left undetermined by the action taken by the surviving trustees, ex-Justice Morgan J. O'Brien of New York, and George Westinghouse of Pittsburgh, who on Tuesday last made public a letter addressed by them to J. P. Morgan on May 6 last, setting forth that they will not insist upon the ninth paragraph in the agreement, constituting the voting trust which bound Mr. Ryan, and presumably would bind the purchaser of his interest to "execute an instrument continuing a further period of five years this agreement and the powers of the trustees hereunder," in case the trustees should deem it advisable.

Letter of Trustees to Mr. Morgan.

The following is the full text of the letter sent to Mr. Morgan, and in which the trustees express the fullest confidence that, either under a continuance of the voting trust or otherwise, the new owner of the stock will look

out for the interests of the policyholders:

New York City,
May 6, 1910.

J. Pierpont Morgan, Esq.:

Dear Sir: On June 15, 1905, the trust agreement between Thomas F. Ryan and Grover Cleveland, Morgan J. O'Brien and George Westinghouse, trustees, was executed and the ninth paragraph thereof provides as follows:

"Ninth—This agreement shall continue in force for the full period authorized by section 20 of the General Corporation Law of the State of New York, viz.: Five (5) years from the date hereof. It shall be continued thereafter so long as the trustees shall deem advisable, and the party of the first part hereby agrees that, upon the expiration of any period of five (5) years, he will, upon the request of the trustees, execute an instrument continuing, for a further period of five (5) years, this agreement and the powers of the trustees hereunder, including said power to require an extension hereof. This agreement may, however, be terminated by the trustees in their discretion whenever in their opinion its purposes have been accomplished, or for any reason its termination is, in their opinion, advisable."

As the five years therein mentioned will expire on the 15th of next month, it is imperative that the undersigned, who, because of the death of Mr. Cleveland, are acting alone as trustees, should acquaint you with their present attitude and views regarding the trust.

The purpose which was sought to be subserved by the trust is fully set forth in the correspondence which passed between Mr. Ryan and the trustees, a copy of which is herewith sent you. In view of the results accomplished, though the labor was gratuitous, we feel that we are amply repaid in that we were of service in putting an end to the conditions which existed in the company at the time of our appointment, and it was largely due to the wisdom and judgment of our late chairman, the Hon. Grover Cleveland, that the loss of public confidence, which affected a

great public trust of more than \$400,000,000, representing the savings of over 600,000 policyholders, has been restored and the society placed again in its rightful position as one of the largest and strongest of the insurance companies in the United States.

We advert to this not to enhance the value of our services, but to point out the wisdom of the plan devised by Mr. Ryan of placing in a board of trustees the voting power, with a view of giving policyholders representation in the board of directors, a plan approved by the Superintendent of Insurance.

Although it was provided that the policyholders should in each year make known their preference for directors of their own class, their position after the first year under the agreement was to commit the selection of the policyholding directors to the judgment exclusively of the trustees. The result, therefore, has been that all the directors elected during the five years have been those selected by the trustees, thus showing the confidence which not only the stockholders but the policyholders had in the plan devised of promoting the welfare and progress of the society.

With such an experience we cannot but feel that it would be wise to continue the voting trust agreement. The change in ownership and the rights which you have secured as the owner of a majority of the stock of the society have altered the situation to some extent, and while we would recommend that the plan of a voting trust agreement should be continued, we do not feel that you should be embarrassed in carrying it out by trustees not of your own selection, and that you should be entirely free to adopt that course which in your judgment seems wise and best. If, therefore, you have other plans, or should you deem it advisable to continue the voting trust, we will leave you entirely free to select such trustees as you may think proper by failing to make a request upon you to execute an agreement continuing it for a further period of five years, as provided in the ninth paragraph above quoted.

It would be impossible, in view of

our relations to the society, not to be deeply interested in its welfare, and we shall at all times be ready and willing to do what we can to promote its success and prosperity. Your interest, because of your ownership of a majority of the stock, will necessarily in the future be exceedingly great, and this, added to the knowledge we possess of your high position in the public esteem, and your broad public spirit, which would influence you to do that which you believed was for the best interests of the society and its policyholders, has led us to conclude that we should relegate to you the right and power of doing what in the premises you think is proper and just.

We regret that your absence in Europe has prevented our stating our views to you personally, but in sending this communication we beg to add that if there is any further information or expression that you desire from us, we will gladly furnish it upon your request.

With sentiments of respect and esteem, we beg to subscribe ourselves,

Yours very truly,
MORGAN J. O'BRIEN,
GEORGE WESTINGHOUSE.

Appointment of New Trustees Expected.

Ex-Justice O'Brien, acting as spokesman for the two trustees, says:

I am credibly informed that Mr. Morgan has concluded to execute a new voting trust agreement. He is now on the ocean returning home, and on his arrival will name the new trustees.

Mr. Morgan's Non-committal Cable.

Mr. Morgan is not expected in New York until next week, and neither George W. Perkins, his partner and adviser in this matter, who is understood to have been in frequent conference with Superintendent Hotchkiss as to the proposed mutualization or the appointment of trustees, or both, nor J. P. Morgan, Jr., was ready to add anything to the following cable received yesterday from Mr. Morgan:

June 14, 1910.

The Hon. Morgan J. O'Brien and George Westinghouse, Esq., Voting Trustees Equitable Life Assurance Society, New York City:

Gentlemen: I received your communication in relation to the future of the Equitable Life Assurance Society, and to your administration of the trust under which you have for five years voted upon the stock of the company.

The delay in answering this communication has been due to my absence from the country, in consequence of which I did not receive your letter until a short time ago.

I wish to assure you of my high appreciation of the disinterested and valuable services that you, in connection with your deceased colleague, President Cleveland, have rendered to the company and its policyholders by your administration of the trust, and personally to thank you for your devotion which resulted so advantageously to the company and its policyholders. Very truly yours,

J. PIERPONT MORGAN.

The foregoing seems to leave every-

thing in about the same position as before, so far as the program hereafter to be followed is concerned; that is, it is still uncertain whether Mr. Morgan will manage the company directly through his control or will appoint new trustees or will endeavor to carry out the mutualization plan. The difficulty about the last-mentioned is to secure a return of the amount invested in the stock. It is supposed that this amount was not less than \$2,500,000, which was paid by Mr. Ryan, and it may have been more, whereas the par value of the stock so purchased was only a little over \$50,000. The "New York Times" is responsible for the statement that the two trustees have been in touch with influential policyholders of the company for several months, canvassing the sentiment as to the termination of the trusteeship. It is not known whether they also canvassed, as to the willingness of policyholders to have the cost of the stock reimbursed out of the surplus of the company, as a condition to mutualization.

DOWN LIKE A STICK.

The Continental Life Insurance Company and the International Fire Insurance Company of America, both Missouri corporations with headquarters in St. Louis, have been placed in the hands of a receiver, in an action brought by some of their stockholders for the purpose of blocking an alleged movement of the secretary, Harry B. Gardner, secretary of both companies, to consolidate the life insurance company with another St. Louis company.

Gardner and his friends recently purchased a controlling interest in the St. Louis National Life, of which he has been elected president. The Continental was to be merged with it.

Among the accusations is that Walter J. Miller was elected president of those companies, together with a board of directors that were not friendly to Gardner and to Harry M. Coudrey, the former president who had co-operated in organizing them—and that Gardner refused to permit the board of directors, thus elected, to obtain possession of the company. It is also alleged that he has transferred \$400,000 of the companies' funds to Alabama, which is out of the jurisdiction of the Missouri courts; and that he has appropriated to his individual use \$53,000.

The West Coast Life of San Francisco has voted to increase its capital stock from \$250,000 to \$300,000 and has opened an oriental office, appointing John Northcott as general agent for the Philippines. A department will be opened later in China.

ORGANIZED TWISTING.

The Baltimore Life Underwriters Association has taken cognizance of an organized system of twisting life insurance policies, the details of which were reported by a special committee, of which E. J. Clark, a prominent member of the National Association, was chairman.

It is said that the twisting is being carried on by so-called "audit and abstract companies," the persons connected with them calling themselves "mathematicians," "auditors," "abstractors" and pretending to be "disinterested insurance experts." The committee thus describes the method of doing this work: "We understand they approach policyholders of the different companies, especially those carrying large lines of insurance, and state that, if such policyholders will submit their policies to the experts for review and examination, the latter will probably be able to save them considerable money, no charge being made unless it can be shown that a saving can be effected, and the charge then to be only a percentage of the saving"; and finds that "this practice can readily lend itself by confusing a statement of half truths and distortion of facts, to a cleverly contrived scheme of 'twisting.' Of course, the general agent, 'as a rule, knows nothing about the matter,' until the policyholder has been safely twisted.

The subject has been called to the attention of Commissioner Crouse, and it is believed that he will do everything in his power to put a stop to the practice.

AMERICAN BANKERS LAUNCHED IN CHICAGO.

The American Bankers Life Insurance Company, of Chicago, has commenced business with \$119,250 cash capital and \$95,400 paid-in surplus. Ernest W. Spicer, most active in the organization of the company and who previously organized the Wisconsin National Life Insurance Company, of Oshkosh, Wis., has been elected president.

Among his previous connections were the Phoenix Mutual in the Pacific Northwest, and the Provident Savings in Salt Lake City. The other officers are James P. Whedon, formerly connected with the McCormick Harvester Company, vice-president and treasurer; William C. Bryan, second vice-president, a well-known Chicago life insurance man; George H. Bresec, superintendent of agents; Harris E. Vineberg, secretary and actuary, who resigns the position of actuary of the Security Life and Annuity at Greensboro, N. C., to accept the position.

MEETING OF FRATERNAL COMMITTEE.

The Fraternal Insurance Committee of the National Convention of Insurance Commissioners is in session this week in New York, at which the various provisions of the proposed uniform bill, brought up at the meeting of the committee in Chicago, are under discussion.

At the meeting in Chicago great dissatisfaction with many of the provisions of the bill was expressed by representatives of nearly all the fraternities which had not readjusted their rates, and by the representatives of some of those which had readjusted. Included among the societies so protesting were several of the largest in point of membership.

Among the provisions which are most strenuously opposed are those providing for adequate rates for new members after a fixed date and for valuation of certificates.

There are many other points of difference, but these appear at the present time to be of the greatest importance.

Compulsory Readjustment Abandoned?

The idea of attempting to compel the societies to readjust their rates for all their members is still adhered to in some quarters, but in view of the recent adverse decisions of the court of highest resort in New York, to the effect that such readjustments are a violation of constitutional rights, it is believed that this must be abandoned as impracticable.

That the view of the New York courts is likely to be widely accepted is perhaps as plainly indicated in the following from the recently issued report of Commissioner Macdonald, of Connecticut, heartily endorsing the principle laid down in the decisions:

Commissioner McDonald on Readjustment.

It has been the custom of fraternalists to increase the rates of assessments whenever it became necessary to do so in order to prolong their existence. Such increases always fall heaviest upon the older members. It has been contended that the right to do this lay in the fact that certificates were issued upon the expressly stated condition that the members insured must comply with all the rules and laws of the order.

The use, or rather abuse, of this condition has forced many thousands of persons of long standing in fraternal orders either to pay prohibitive rates of assessments in their later days or to drop out of the organization they had been supporting.

This practice has been the subject of numerous actions in both the State and Federal courts, but the decisions have been conflicting. The Court of

Appeals in New York State, however, has recently met the situation fairly. This court, while recognizing the fact that increased assessments are necessary because of the early inadequacy of the rates, rendered a logical decision, in which it emphasized the doctrine that the value of the contracts in force could not be impaired and that the customary increases in the rates charged on certificates previously issued would not be permitted.

A contract which authorizes one party to change it in any respect that he chooses would, in effect, be binding upon the other party only and would leave him at the mercy of the former, and we have said that human language is not strong enough to place a person in that situation.

If fraternal associations are bound to insure for a specific rate, which cannot be increased at pleasure as heretofore, the orders will naturally turn to the adequate rate, reserving properly for future increased mortality. The importance and far-reaching effect of such a decision cannot be easily overestimated.

SECURITY MUTUAL'S NEW DIRECTOR.

Clarence F. Hotchkiss, president of the Dare County Lumber Company, the largest lumber concern in North Carolina, with its principal mills at Elizabeth City, N. C., and also president of the Stowe Manufacturing Company and the Marvin Electric Company of Binghamton, N. Y., where he maintains his residence, has been elected a member of the board of directors of the Security Mutual Life Insurance Company of Binghamton. Mr. Hotchkiss has for some time carried the limit of insurance on his life in this high-class mutual company, and is one of the most valued policyholders.

MARSH RESIGNS.

Roy M. Marsh, for some time manager of the Chicago Life Insurance Company and later superintendent of agents of the Security Life of Chicago, has just resigned as superintendent of agencies of the Continental Life and Investment Company of Salt Lake City, Utah. The company's cashier, a close personal friend of Mr. Marsh, also resigned.

The reason for the resignation is said to have been mutual dissatisfaction of the superintendent and the president, each with the work of the other.

LEGAL RESERVE HEREAFTER.

The Midland Life Insurance Association of St. Paul is to become a legal reserve company. It has made application to Commissioner Hartigan for permission to amend its articles.

NATIONAL U. S. A. WINS AGAIN.

The absurd statements made some time ago against the National Life U. S. A. by Gustave Myers, a former employe, were exploded by the report filed recently by Master in Chancery Sigmund Zeisler, to whom they were referred. In this the Master declared that the management of the company was honest, the salaries of its officers moderate and the valuation of their home office building eminently fair. The official report says in part:

"Every essential element of a conspiracy between Myers and McEldowney, wrongfully and maliciously to destroy the reputation, property and business of the complainant * * * * * is here present." and "I conclude that in the various steps taken by Myers as hereinabove outlined, his purpose was to frighten the officers of the complainant into paying him tribute in the shape of money or a favorable agency contract, or other things of value, so as to induce him to cease his attacks on the standing of the complainant and the good name of its officers."

I conclude, as a matter of law, that the company is entitled to a decree perpetually enjoining the defendants as prayed in the bill of complaint.

The company's bill of complaint prayed for a decree perpetually enjoining Myers and his associate from conspiring among themselves or with others to write, print, publish, circulate, mail or distribute any matter derogatory to the National Life, its officers or methods of doing business.

In New York city twenty-two persons were killed and 104 injured last month. Automobiles killed eleven, wagons five, trolley cars three, auto trucks two and motorcycles one.

INTERESTING LITIGATION.

The Supreme Lodge, A. O. U. W., composed of various grand lodges, who send representatives to the Supreme Lodge, enacted, in 1906 a law by which there was created a "Fraternal Aid Fund," having for its purpose the assistance of over-burdened jurisdictions in the payment of excessive death losses. Several of the grand lodges were slow in paying over this fund. Some refused to pay, and tried to separate, or, in other words, secede—notably Nebraska and Kansas. They collected a large amount from their members for this specific purpose. Persuasion proving of no avail, an action was begun in the United States Circuit Court against each of those grand lodges. Each filed a demurrer, which was overruled. In the Nebraska case no memorandum was filed, but in the Kansas case just decided, Judge Phillips of the United States Circuit Court holds:

The laws of both the plaintiff and defendant since 1873 had recognized a division of financial responsibility, hence it is provided that each Grand Lodge separate beneficiary jurisdiction shall collect and disburse beneficiary assessments in payment of death losses, and the law also made it the duty of the Supreme Lodge to collect other mortuary funds, known as relief, guaranty and fraternal aid funds, to be disbursed among the beneficiaries of deceased members any and all jurisdictions under the laws of the order. The representatives of the defendant lodge helped to enact these laws and were to that extent responsible for their provisions. The funds in question were collected by the defendant lodge and paid to it by the members of the lodge for the specific purpose of application and distribution by the Supreme Lodge. This being conceded it does not lie in the mouth of the defendants to say that the Grand Lodge was only authorized by its charter from the State of Kansas to do this or to do that, or that it is not competent for the Supreme Lodge to order or command it to collect such fund. This defendant "in recognition of its relation to the Supreme Lodge undertook to collect from the members of the order certain funds to be paid over to and appropriated and distributed by the Supreme Lodge, and that in pursuance of its undertaking it did collect a large amount of such funds, and that after having so collected it the other defendants to the bill, under the guise of authority, undertook to divert and apply it to a use not within the contemplation of the parties or the individual contributors of such fund at the time it was collected and paid.

Neither law nor good conscience will permit a corporation, any more than it will an individual, who thus receives a fund that does not belong to it—received by it for the benefit of a third party—to divert it to another use or appropriate it to its own benefit.

These decisions should secure for

some of the jurisdictions which have been relying upon these fraternal aid assessments to help them out, a large sum of money, running into the hundreds of thousands.

ACTUARIES MEET IN CHICAGO.

The American Institute of Actuaries met in Chicago on the 9th and 10th instants, with Lucius McAdam, president, in the chair. Mr. McAdam also read a paper on "Continuous Installments," but was compelled to retire from the meeting on account of sickness. Other papers were read as follows:

"Monthly Instalments Certain," E. R. Carter, of the National Life of U. S. A.

"Group Valuation," by R. M. Webb. "First Year Reserves," E. W. Hyde, of the Columbia Life of Cincinnati.

The last-mentioned paper attracted considerable attention, being a discussion of the various minimum standards now in use, including a suggestion of another method, being an artificial reduction of first year net level premium reserves gradually made good. The special point was that the amount of the reduction was determined by the author's view of what is required.

Officers for the year were elected as follows: President, H. W. Buttoff, Indianapolis; vice-president, O. J. Arnold, of the Illinois Life, Chicago; secretary, F. C. Seitz, Security Life, Chicago; treasurer, B. F. Campbell, Armour Institute, Chicago; librarian, E. R. Carter, National Life, U. S. A., Chicago.

It was voted to hold semi-annual meetings, and also that papers should not be given out in advance of publication by the institute.

ALABAMA TAKES ACTION.

Hon. Frank N. Julian, commissioner of Alabama, in pursuance of the provisions of the law of that State, which prohibits the sale of stocks in life insurance companies without permit from the insurance commissioner, has made a ruling concerning the granting of such permits, under which it will not be possible for promotion to be carried on in the State of Alabama except in obtaining increase of capital for companies of other States which are already transacting business and are duly licensed.

The Mystic Toilers of Des Moines, Iowa, and the Supreme Tribe of Ben Hur of Crawfordsville, Ind., will not be relicensed in Minnesota. The Aid Association for Lutherans, of Appleton, Wis., has withdrawn from the State.

THE CONNECTICUT GENERAL LEADS.

In a recent issue of "The Chronicle," a table was printed, purporting to show that the Massachusetts Mutual Life Insurance Company of Springfield, led all the companies reporting to the New York department, in the matter of the percentage of increase in insurance in force during the year 1909. The figures were taken, without careful comparison with the State reports, from the columns of a contemporary. It transpires that they relate only to the fifteen largest companies doing business in New York, of which in this regard the Massachusetts Mutual was the leader.

The leader of all the companies reporting to the New York department, however, was the Connecticut General Life Insurance Company, which showed an increase of 11.78 per cent. of insurance in force. The Phenix Mutual of Hartford, likewise showed an increase of 8.79 per cent., both of these being in excess of the increase in the Massachusetts Mutual, which was 8.03 per cent. The Union Central of Cincinnati, likewise, was in the same class, with a showing of 8.02 per cent.

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)

Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

THE TRAVELERS A LEADER IN INSPECTION AND PREVENTION.

The Travelers Insurance Company of Hartford, a leader in all branches of accident insurance, ever since its foundation as the original accident insurance company of the world, is well to the fore in the matter of inspection and prevention. It has a corps of 80 trained inspectors, including graduate engineers who have become specialists. The duty of these is to keep the risks constantly inspected and to offer suggestions to the employers to protect the employees against accidents; and the service is constantly extending and improving.

Thus in 1907 no less than 1.34 per cent. of the gross premiums was expended for this purpose; in 1908, 1.61 per cent., and in 1909, \$143,588, or 1.8 per cent. Up to the first of June, in the year 1910, "The Chronicle" is informed, the expenditures have been no less than 2.05 per cent. of the premiums received during that period.

The importance of this service is fully appreciated by the company and its officers; and it is believed that the amount and quality of the service are not exceeded by any other insurance company in the world, as to effectiveness of organization, as to promptness or as to value of the service rendered.

SUIT GROWING OUT OF STOCK SALE.

The daily papers of New York City having published inaccurate and garbled accounts of the issues involved in a suit brought by Edward S. Munford, of Washington, and Hon. William Barrett Ridgeley against John G. Walker, president of the Life Insurance Company, of Virginia, and his sister, Miss Annie R. Walker, service of process in which was made upon them as they were about to board a steamer for Europe, at Hoboken, Saturday, June 4, the attorneys of record, Sommer, Colby & Whiting, of Newark, N. J., of which firm ex-Sheriff Sommer, of Essex County, is the head, and Senator Colby the second partner, has given out the following statement:

The actions brought by Edward S. Munford and William Barrett Ridgeley against John G. and Annie R. Walker, of Richmond, Va., the papers in which were served on Mr. and Miss Walker as they were preparing to board a steamer for Europe, in Hoboken, on Saturday, June 4, are stated by the attorneys of record, Sommer, Colby & Whiting of Newark, to involve the following controversy:

John G. Walker, who is the presi-

dent of the Life Insurance Company of Virginia, agreed on November 6, 1909, to sell, through Edward S. Munford, 1,381 shares, being the majority of the stock of the Life Insurance Company of Virginia, to such purchaser as Mr. Munford should secure, making him the net price of \$800 per share. He later agreed to deliver 500 additional shares upon which he had obtained an option, at the same price. On the other hand, Mr. Munford agreed that the purchaser should be bound to accept and pay for within a certain time all the additional shares of the company, if offered, at the same price. Munford was authorized to find a purchaser, and the contract promised him all that he could obtain in addition to the price of \$800 per share.

A purchaser was found in the person of Hon. William Barrett Ridgeley, formerly comptroller of the currency of the United States, yet more recently president of the leading bank in Kansas City, Mo., a well-known banker and capitalist. Mr. Ridgeley promised to purchase at the price of \$1,000 per share, and was offered by Mr. Munford as the purchaser, ready to fulfill the contract. Mr. Ridgeley meanwhile had made arrangements for yet another transfer under which, by reinsuring the company, he would have made a very considerable profit. This, it is said, came to the ears of Mr. Walker, who, seeing the possibility of making the profit for himself, refused to carry out his agreement, by naming terms which would have deprived Ridgeley of all the powers and benefits of property.

DULY CELEBRATED.

On the 9th inst., the 73d birthday of the veteran manager of agents of the Travelers Insurance Company, Major E. V. Preston, which was also the close of his 45th year in the service of the company, was celebrated by a testimonial luncheon at the Hartford Club, tendered by the other officers of the company. Major Preston's connection dates back to within one year of the organization of the company. He was at first a soliciting agent, then a special agent, and in 1868 was made superintendent of agencies.

REINSURES THE CORN BELT.

The LaSalle Life Insurance Company, Chicago, has reinsured the Corn Belt Life of Danville, Ill., taking over about \$700,000 of business formerly on the assessment plan, the policies being exchanged for old line policies, with a 40 per cent. impairment lien to be removed upon evidence of insurability.

Hotchkiss Before Fire Insurance Agents.

Hon. William H. Hotchkiss, Superintendent of Insurance, addressed the New York State Association of Fire Insurance Agents at their convention at Utica, on the 10th, giving his special attention to the question of insurance legislation and commencing with a quotation of a statement of a company officer in a recent address, as follows:

Laws are passed to govern our business that cripple it without any benefit to the insured. Laws are framed by those who have some political, revengeful or financial purpose in view and are passed by men who have given them no consideration.

An Erroneous "Company Point of View."

Mr. Hotchkiss said that while this is the company point of view, "a year's experience with fire insurance legislation in New York suggests either that this statement is much overdrawn, or that the Empire State is the exception which proves the rule."

It was not to be denied, he said, that companies do suffer because of prevailing prejudices against corporations, but that most of the legislation effecting this is passed for revengeful, political or financial reasons, is untrue. He believes supervision and regulation to be demanded by an enlightened public, and "that company officers have in the past approached the problem of legislation through the side, instead of the front door." It was his opinion that, notwithstanding the technical character of insurance bills and the introduction of some for purposes of revenge or politics or to enable one company to obtain an unfair advantage, the companies should not, as in the past, "skulk at home, their officers helplessly saying Cui bono and uttering cuss words against Government, or, if they come to the capital city, present signed check books to be filled out by so-called legislative agents."

Kinds of Bills and the Best Way to Handle Them.

The superintendent classifies bills as follows, stating, in his opinion, how each of these classes can best be handled:

(1) Those introduced for sinister or revengeful purposes;

(2) Those generally amending the law by increasing or restricting the powers of companies;

(3) Those offered by companies or interests which therefrom seek an advantage over their competitors.

The first are easily handled. In the present state of the public mind a real strike bill, once fairly exposed, has as

much chance of passage as would a bill to repeal the insurance law itself. While a bill voicing the grievance of some single policyholder is apt, unless the wrong aimed at is general, to die in committee or be buried by an adverse vote. I say, easily handled. That is by facts plainly stated and hammered home. If such bills get through the fault is more theirs who by silence or skulking fail to do their duty than of the legislators who vote aye thereon.

The second class includes by far the larger number of bills considered by a legislature. Some are good and some bad. True, some good bills fail and bad bills pass. But really, whose fault is it? The legislators? Or the companies, who, fearing perhaps the exaction of an ancient tribute or, what is more likely, denouncing the whole legislative business and wanting to be let alone, express only a dyspeptic interest in what is going on—and take the consequences? Discussion, argument, facts and some concert of action—which, when existing, is too often half-hearted and insincere—will accomplish the result. Money won't—at least in New York.

The third class is the most troublesome. Legislators and department representatives are quickly lost in a maze of representation and misrepresentation bandied back and forth between companies seeking laws that will give an advantage or cripple a mercurial rivalry immediately comes out. I know of no more hopeless situation in legislation than when one great interest wars on another and each apparently proves its case. Then is the time when the legislative philosopher may well take thought of "Punch's" famous advice about matrimony and—"Don't!"

The superintendent is of the opinion "that bills, if good, will pass, if properly explained and advocated and watched—particularly watched; and, conversely, if bad, will fail, and by the same method."

The Office of the State Department.

He is also of the opinion that "a supervising department holds the scales between the two" and enlarges upon this as follows:

No insurance dogma more justly merits contempt than that which asserts that departments think only of the policyholders. Of course their first care is of the individual—that is the principal duty of government—but companies rightly managed and properly sensitive to modern conditions are sure to receive that support which all the creatures of government claim. And so in legislation, the interests of companies may with confidence be placed in the hands of their insurance departments. Doing so, at least as conditions in our capital cities have been, the unholy toll of legislative agents and State taxes of a sinister kind may no longer be exacted. The companies will at last have opened the front door!

Though a pronounced advocate of

strong supervision, the superintendent declares that he is "not unconscious of the dangers which are hidden in these suggestions"; but he is of the opinion that in technical matters the legislator who knows the facts should "welcome rather than resent the assistance of a department able to furnish expert advice and deeply interested in the perfection of the law." This, he says, "was the case in a recent legislation in New York," which he declares largely eliminated the third house, kept strike bills out and caused bills of great importance to be passed, and "best of all, the companies learned that there really was a front door."

The Most Significant Statement as to the Future.

Perhaps the most significant statement in the entire address, in view of the present political situation and the possible introduction of other methods of legislative co-operation than the purely partisan method which has heretofore been employed, is the final portion of the superintendent's address, which is here given in full:

In present conditions, this is as it should be. The problem is, however, by no means solved. Conditions are changing. An aroused electorate is demanding the means whereby legislative processes will be changed. The autocracy of legislative leadership, partisan or bi-partisan, is disappearing before the rising tide of protest. Our average legislator will soon be freed of fear as to his tenure, and, with more time to give to the people's business, seek the reward of their commendation and renomination by study and open advocacy of bills, in the insurance, the banking, the public service and other fields. If he does, companies and citizens may at last turn to the open door given by the constitution, and from the legislature itself seek directly the legislation they desire. Then will the department approve bills, not often press them. And then will the evil era of the third house and political contributions that laws be born be forever at an end.

Commissioner E. Myron Wolf is still in charge of the California Insurance Department. E. C. Cooper, former private secretary to Governor Gillett is scheduled as California's new insurance commissioner, and unofficial advices state that he will assume charge of the department in a few days.

The Western Preferred Indemnity Company has been incorporated at Seattle, Wash., with a capital of \$100,000. The incorporators are George W. Barnes and E. J. Adams.

THE ST. JOE MEETING.

The Missouri Association of Local Fire Insurance Agents met at St. Joseph last Saturday. All sessions were executive. From reports given out it appears that only one subject was given much consideration, namely, legislation. It is said that there was harmony in the meeting, not because everybody held the same views, but because all were agreed that conditions in the State are so nearly intolerable that something must be done to improve the situation, and that must be done through legislation.

It will be recalled that a bill was put through the Missouri legislature in the session of 1909—and vetoed by Governor Hadley—which legalized the organization of local boards and permitted them to exercise rating powers. This bill represented the doctrine taught by George D. Markham, of St. Louis, for the past eight or ten years, the doctrine that the agents should have a voice in fixing the rates of insurance. This doctrine is anathema to the companies and it was after their attorney had presented arguments to the Governor of Missouri that he vetoed the bill, though he had appeared kindly disposed toward it previously. Should the agents of Missouri again secure the passage of a similar measure it is likely the companies again will do their utmost to kill it. The Western Union is not ready to see the making of rates turned over by law to local agents, subjected to local influences. It is committed to the system of advisory rates made by independent inspection bureaus. It has fought for that principle, has secured its adoption through most of the West, and apparently prefers present Missouri conditions for a while longer to giving local boards rating powers by statute.

Wants Stable Rates.

According to reports from St. Joseph the local agents of the State are by no means wedded to the board rating idea. Even the St. Louis agents, who worked hardest for the former bill, are not demanding its re-enactment. What is wanted is some kind of a measure that will permit stable rates in Missouri. Some agents would willingly have the State assume supervisory powers somewhat as Kansas has done. Others would be glad to deprive the companies of control of rates and turn it over to the local boards if only agreements to maintain those rates are legalized.

There was such diversity of opinion among the sixty agents of St. Joseph that they turned the whole question over to the executive committee

of the association. Whatever the five men on that committee agree upon will be backed up by the association.

So far as learned, the time-honored question of overhead writing, ownership of expirations, multiple agencies and outside brokers received little, if any, attention from the Missouri agents. In that State the St. Louis and Kansas City agents make up the most important part of the membership of the State association, and they are at the same time the leading "outside brokers," so far as the rest of the State is concerned. If any company is violating its overhead writing pledge in Missouri, the chances are it is doing so in favor of a St. Louis or Kansas City agent who is writing a large risk out in the State. Under the circumstances a discussion of these questions would be more academic than earnest, even if the agents had not other questions of much greater local importance.

INSURANCE IN TEXAS.

A new insurance law and a new governor and a new insurance commissioner in Texas have formed a potential trouble trinity. The new law made rates to be charged by fire insurance companies. These rates were in some instances increased, much to the arousing of amazed resentment on the part of the law's progenitors, who intended that all rates were to be scaled downward. Governor Campbell is all warmed-up and because Insurance Commissioner Hawkins does not agree with his views a resignation has been requested and respectively declined.

The Texas rating board is to meet on Tuesday next and Governor Campbell has suspended a sword of Damocles over its head in the form of a threat to call a special session of the legislature to repeal the present insurance laws and enact others.

THE PLATE GLASS SITUATION.

Owing to the high price of glass and the insane methods of some new competitors the officers and managers of some of the plate glass insurance companies are thinking seriously of retiring, according to the president of one of the local companies.

As an example of the methods of some companies, as he reports, one bid 1.10 on a certain risk in this city, another bid .95 and the company that landed the business took it for .23. "How can they do it?" he concludes.

TO REDUCE FIRE INSURANCE EXPENSES.

A committee of State insurance commissioners is in session this week at the Hotel Manhattan for the purpose of inquiring into the expenses of fire insurance companies and particularly commissions paid to brokers and agents, with a view to considering how much expenses may be reduced. Hon. Eugene V. McGivney, Insurance Commissioner of Louisiana, is chairman of the committee and in charge of the investigation.

Among those who have already appeared before the committee are Geo. W. Babb, vice-president of the National Board of Fire Underwriters; A. A. Stoddard, of the New York Board of Fire Underwriters; E. B. Richards, United States manager of the North British and Mercantile, and Secretary Coffin, of the German-American.

Mr. Richards expressed the opinion that a uniform scale of commissions for agents was impracticable and that competition in this regard could not be controlled. He was also of the opinion that the public would not be benefitted by adopting it, and that it would merely lead to injustice.

Commissioner McGivney asserted that cases of the brokers board receiving as high as 30 per cent. had been uncovered and commissions to agents as high as 40 per cent.; and that by reason of this, although 15 per cent. was the ruling commission in the smaller cities, the average had been increased to 21 per cent.

National Board Not Guilty.

Vice-President Babb, of the National Board of Fire Underwriters, explained that the board had nothing to do with the making of rates for fire insurance or fixing rates of commission, but Commissioner McGivney interrupted as follows:

But the National Board of Fire Underwriters controlled the question of commissions paid up to 1882. In that year it was a condition of membership that a uniform rate of 15 per cent. be established and adhered to as commissions for brokers. Why did the board cease to fix the commissions?

Vice-President Babb replied that the national board had not interfered with the matter for twenty-five years past, "because it was thought that might lead to destruction of the board, because of the complex interests involved."

Commissioner McGivney called attention to the fact that expense rates have about doubled in the last twenty-five years, which was met by the statement of Mr. Babb that the board had done all it could to keep down expenses and also to reduce the fire

rate. As an instance of this, he cited the fact that fire insurance companies are furnishing money to Professor Norton, of Columbia University, who is continually making researches and devising means for reducing the fire hazard. Relative to the commission situation he made the following statement:

The greatest evil is in the big cities like New York, Chicago and St. Louis, where the brokers have driven out the agents. I admit it would be better for the companies and the public to reduce the expenses, but I do not desire that to be construed as meaning that I favor control of commissions and rates by the States.

WHY OUT OF THE UNION.

There has been much speculation from lookers-on and the man-up-a-tree as to just exactly what the trouble is in the West about fire companies affiliating themselves with the Western Union.

This is the way the present unpleasantness is summarized by a layman among "The Chronicle's" readers:

1. When the separation movement was brought about the agents decided definitely for one class of companies or the other. The non-union companies promised to protect the agents who stood by them. It is not fair now to cause another separation. There are some 125 non-union companies operating in Western Union territory. It would not be possible to get nearly all these companies in and the agency system would be more or less disturbed.

2. While the non-union companies might reduce their commission expense to a certain extent, yet they believe their general expense is less than that of the average union company. Many non-union companies are now contributing to every form of co-operative expense except that of the Western Union.

3. The leading non-union companies declare that they are making satisfactory profits under existing conditions. Their plan is on the whole satisfactory. Why change a business system that is now rendering a reasonable profit for one in which some chance is taken and one that will require some notable changes?

4. Union rules do not permit the combined fire and tornado policy, which some of the outsiders regard as valuable.

5. Some of the outside companies have profitable contracts of reinsurance with companies that will not join the Western Union. Such contracts are prohibited by the Western Union. They are valuable and such that these companies would not care to abandon.

6. Evidence is claimed to be at hand to prove that certain union companies are not living up to their obligations. If the non-union companies that intend to play fair would enter the union they fear that advantage would be taken of them by these unfaithful union companies.

THE YOUNG EAGLES' GATHERING.

In expectation of the rich harvest for them, of the legislative investigation which is soon to be on foot and which, as now arranged for, will doubtless hit fire, casualty and industrial life insurance much harder than the corrupt legislators at which the regulation was originally directed, the Law Reporting Company is sending out the following letter:

Re Investigation of Corrupt Practices in Legislation and Insurance Companies, by Joint Committee of the New York Legislature.

Dear Sir: We are prepared to receive orders for transcripts of the testimony to be taken throughout the above investigation, to be held pursuant to the Senate concurrent resolution adopted to-day, a copy of which is enclosed. Transcripts of the testimony will be delivered or mailed daily, immediately after the adjournment of each session of the committee, and will be furnished at 5 cents per folio, of 100 words, an unusually low rate, which we are enabled to make on account of the large number of copies required.

This investigation will deal particularly with the relations of corporations to legislation. Counsel and officers of all the companies under investigation will find it important to keep closely in touch with the progress of the investigation, which can best be done from the daily reports of its proceedings. Your order is solicited, either for the entire testimony or such part thereof (relating to a particular subject) as you may indicate. If you desire to receive these reports please fill out and return the enclosed blank at your earliest convenience.

Respectfully,
T. W. ALLEN,
Secretary.

AS TO FEDERAL SUPERVISION.

Would Federal supervision of insurance relieve the present burdens of State supervision in anywise? This is the main point which that former Colorado Insurance Commissioner, Rittenhouse, now president of a leading company, made in an address to the Kansas association of underwriters last week.

This is the way he views the situation:

Would not the States still have the right to tax us as they do now; to demand annual statements as they do now; to regulate contracts as they do now; to examine companies as they do now; and, in fact, to practically continue their present form of regulation?

The only hope of improvement, that I can see, would come from the incentive to uniformity which the States might get from the national laws in enacting legislation upon this subject; and, while it may be worth while to fight for Federal supervision for this purpose alone, we should first be reasonably sure that we are not going to add another department to the forty-six we already have. It is safe to say that, if we had Federal supervision, it would add to our tax expense rather than reduce it.

I do not want to be understood as being opposed to any measure or any movement looking to uniformity of insurance regulation. I am most heartily in favor of any plan that will remove any of the difficulties under which we now labor. If Federal supervision will do it, I am for it; if it will still leave us with State supervision, I am against it.

THE WHEAT OR THE CHAFF?

Chicago (Special).—Announcement of the organization of the Western Insurance Bureau created very great interest in the Western field, especially among the field men and local agents of the non-union companies. They were anxious to learn details, which have not been rapidly forthcoming. The first impression was that the organization of the bureau meant the starting of a new separation at once, while the plans, as announced, contemplate the application of the bureau's principles in Illinois first, with gradual extension to other States. Even this plan is going to entail a lot of work. According to common report some of the bureau companies will have a vast amount of housecleaning to do in order to comply with the commission rules. A member of the non-union managerial set said the other day that non-union managers are prone to severe lapses of memory when they tell offhand the number of excess commission contracts they have outstanding. It is a fact that one or two companies that have helped organize the bureau have about the worst reputation for paying

excess commissions of any companies in the Western field.

Specials Are Pleased.

Special agents of companies which have joined the bureau seem generally to be much pleased with the new movement. They believe it means the beginning of a clean-up. Furthermore, they take pride in being organization men. It gives them a certain caste they did not have before. It separates them to some extent from the rest who have been designated by the negative term "non-union," which covered everything from State agents of the American or Connecticut to farm specials of the smallest Iowa or Nebraska local company.

Special agents whose companies now are non-affiliated do not appear so happy. They know as well as anybody does that when the bureau sees fit to start the separator they will have generally to seek new agents unless they already are in one-horse agencies that have no lines to carry which in big companies are necessary. Furthermore, it is humiliating to some of the good men who represent non-affiliated companies to feel that they are part of what is left after the cream of the fire insurance companies has been twice skimmed.

THE WESTERN BUREAU.

The Western Insurance Bureau, the practical successor of the Western Union, now has 38 companies on its roster, the following seven having joined the original 31:

Mechanics of Pittsburg, the Pittsburg, Lumbermen's of Philadelphia and German of West Virginia, all represented in the Herrick & Auerbach general agency; Girard, Central National of Illinois and Farmers of New York.

This is going some, and indicates that the new organization means to, can and will do business a la Chicago.

BOSTON MUTUAL WANTS TO ESTABLISH GUARANTY CAPITAL OF \$150,000.

William A. Morse, counsel for the Boston Mutual Life, has certainly shown a capacity for putting things through. His petition for legislation, as outlined above, was admitted to the Massachusetts House last Thursday morning, under suspension of the rules, and the Senate concurred the same morning. It was referred by both branches to the legislative insurance committee, which reported the bill accompanying the petition in the house the same day, Mr. Cavanaugh of Boston dissenting. The bill thereupon received first and second reading in the house the same afternoon. The reason of Mr. Cavanaugh's dissent was that one of the rules of the Massachusetts Legislature provides that no bill or resolve affecting the rights of a private corporation, otherwise than as it affects generally the people of the whole Commonwealth shall be reported by a committee until proper notice has been given by public advertisement to all parties interested. The hearing of the committee on the bill had not been advertised. When the bill came up for third reading in the house Tuesday morning it was debated for an hour, and Speaker Walker finally ruled that a precedent established by former Speaker Barrett authorized the committee to use its discretion in the matter. The bill was then passed to third reading with an amendment providing that, in case the company should go into liquidation, the policyholders should be held to be preferred creditors.

The text of the bill (House bill 1781), excepting the amendment referred to above, is as follows:

AN ACT

To authorize the Boston Mutual Life Insurance Company to establish a Guaranty Capital.

Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:

Section 1. The Boston Mutual Life Insurance Company, a corporation existing and doing business under the laws of this Commonwealth, is hereby authorized to establish a guaranty capital of one hundred and fifty thousand dollars, divided into shares of \$100 each, which shall be invested in the same securities in which insurance companies are now required by law to invest their capital.

Section 2. At all elections of directors the number shall be as provided in the by-laws of the corporation, one-half of whom shall be elected by the subscribers to the guaranty capital

stock, and the other half by the assured, voting in separate bodies. The directors shall either be stockholders or assured, and when they cease to be such stockholders or assured, they shall cease to hold office as directors.

Section 3. The stockholders of the guaranty capital shall be entitled to such annual dividends, not exceeding 7 per cent., payable from the net surplus, as may have been agreed upon in the subscription therefor. The guaranty capital shall be redeemed by an appropriation of surplus whenever said surplus shall be twice the amount of said capital, or at any time prior thereto should the assured by vote so direct.

Section 4. This act shall take effect upon its passage.

The Boston Mutual Life, in its annual statement for 1909, submitted to the Massachusetts Insurance Department, claimed assets of a little over \$1,075,000, of which a little over \$25,000 stands for surplus. Should the establishment of the guaranty capital be allowed, while it would figure as a liability in the general statement of the company, it would add \$150,000 to the surplus to policyholders, and strengthen the company to that extent as an applicant for public favor. To put the bill through all the stages of legislation required before it reaches the governor for signature, will mean extraordinary quick work, as at this writing (Tuesday afternoon) prorogation of the legislature is expected by Thursday of this week. It is understood that the insurance department has no objection to the legislation sought, and the fact that the Boston Securities Company, which has been financing the Boston Mutual Life, under a contract to provide agency expenses, etc., in return for certain rights as to the company's income, has already sustained net costs of about \$1,000,000, would seem to make it desirable that the financial position of the company should be improved by the establishment of the guaranty capital. It may be remembered that John W. Wheeler, president of the company since its establishment, died a few weeks ago, and Vice-President Edgerton, who has been an active factor in the company's development, is now in charge.

Boston, Wednesday, 5 p. m.—The bill to establish a \$150,000 guarantee capital for the Boston Mutual Life has been passed in the Massachusetts House. The legislature adjourns tonight for the year, and it is regarded as certain that the bill will be put through all stages of legislation at the final session of the senate this evening, and thereupon be immediately signed by Governor Draper, and that it will be in effect when these lines appear in print.

Massachusetts Fire and Marine Report.

The text of the fifty-fifth annual report, Part I, covering fire and marine insurance, of Commissioner Hardison, of Massachusetts, is given to the public this week, and contains so much and so much that is well put of general, yes, even national interest, that "The Chronicle" presents the following liberal extracts therefrom to its readers:

Gains in Losses in 1909.

An innovation in this report is the publication of a table showing sources of the gain or loss in surplus by the various companies during the year 1909. It shows that the gains have had the better of it, and consequently that the year, considered by itself, was a very good one, and helps the companies in making up for the San Francisco and Chelsea conflagrations, not to mention others. It appears from this table that 217 companies made a net gain during the year in their underwriting account of \$38,787,993 and in their investment account of \$28,664,451, making a total of \$67,452,444. The full story is told by the table on the opposite page.

This exhibit is made up on the basis of the actual experience of the calendar year. It charges a company with only those premiums pertaining to or belonging to the business of that year, also the income from investments and other sources during the year, and offsets these charges with all the losses and expenses paid and unpaid which belong to that year. In other words, the business of the year is treated as though it were separate and apart from the business of the preceding or succeeding year, leaving for the succeeding year or years a due proportion of the premiums to carry to maturity the policies outstanding at the end of the year.

Expenses of Fire Insurance Companies.

In the text of his report of last year the Insurance Commissioner suggested that it might be necessary to limit by statute the expenses of fire insurance companies. The reason for the suggestion was the well-known fact in insurance circles that a larger proportion of the premiums are being used for commissions to agents by some companies than seems fair or necessary. That 40 cents out of \$1 of a premium should go to an agent for his commission in placing a policy seems a rather large amount when compared with the 60 cents which goes to the company for paying losses and all the other expenses to which the company is subject, such as maintenance of office, salaries, clerk hire, taxes, fees, costs of adjustment of losses, and the like. To be sure, not all premiums are subject to so large a commission as 40 per cent. In fact, at present it is true of only a small proportion. But the tendency is in that direction for a certain class of risks known as "preferred," meaning by that term a class on which the loss ratio, or the percentage of loss to premiums, is small, consequently on these risks there is a good profit. This is the

class of business all companies desire to procure, and in order to obtain it not a few of them will offer the agent who controls such risks a higher commission than he is at present receiving. As a result, commissions have advanced on this class of business to 40 per cent. in some cases at the present time, with a tendency still upwards.

Another Potent Factor in Raising Commissions.

There is another influence at work for increasing commissions and that is the effort of new companies and companies of indifferent financial standing to obtain business. For example, a company with a capital of only \$200,000 and a small surplus seeks for agents in the various communities. Agents of standing who command the best patronage of a place have a long list of old companies with high financial standing and naturally would give all their business to such companies—at any rate the cream of it—and usually they do not care to take on new companies

basis. The companies want the business and their demand works up the commission instead of lowering the premiums. Were the business done direct with the customer, the natural way for the companies to get it in competition would be by reducing the premiums, and thus the competition would inure to the assured's benefit. But as the business is done through agents, who have come to control it, the competition for it must be in a form attractive to the agent. The assured is eliminated from consideration and influences are brought to bear upon the agent. From time to time he is offered higher prices for what he has to sell or controls, and thus gets the benefit of the present system. An estimate from the data at hand makes the increase in commissions as a whole during the last 10 years close to 3 per cent., the present average being about 21½ per cent., which gives the agents about seven and a half millions a year more than they would have received on the basis of ten years ago.

And here it should be observed that

convention of insurance commissioners, which was held in August at Colorado Springs, and consists of the following commissioners:

James V. Barry, Michigan.

Eugene J. McGivney, Louisiana.

Charles C. Lemert, Ohio.

Thomas H. MacDonald, Connecticut.

James R. Young, North Carolina.

Already several hearings have been given to the fire insurance interests, and the facts, as hitherto set forth, have been generally admitted. But thus far fire insurance men generally seem to be at sea as to the possibility of a remedy, although admitting the unsatisfactory conditions, which the companies are not apparently able or do not see their way clear to control.

It is strongly argued, and seems plausible, that any legislation which fixes the expense which may be incurred on account of the fire insurance business will have the effect to give a monopoly of it to a few great companies, for, to accomplish any change in rates which would benefit

except to make them the dumping ground for such poor risks as their old and conservative companies object to taking. To get into such agencies and obtain any part of the good business they control, it is necessary for weak and fledgling companies to offer a larger remuneration to the agents than they are getting from old and tried companies, and thus competition forces the commissions up and is continually doing it. It is true that not all agents will take on new companies, even though these seductive offers are made to them. But on the other hand there are those who will listen to the ready-dollar argument; and in addition use the offered increase in commissions as a lever to pry up the commissions paid by their other companies.

The Outcome Not Unnatural.

Now, this is all a very natural outgrowth of the method of carrying on the business on a commission

this commission is a yearly charge if the business is renewed yearly, and is a charge on the premiums of the whole term if the policy runs say for a period of five years. Unlike the commission for writing a life insurance policy, the great bulk or the whole of which is paid when the risk is covered, the fire insurance commission is a continued burden on the policy or anywhere from 15 to upwards of 40 per cent. If the latter commission is paid, one whole premium in every two and one-half years goes to the agent.

What the Insurance Commissioners Are Doing.

In view of this increasing cost of carrying on the fire insurance business, the insurance commissioners of the country have undertaken to make an investigation, through a committee of the association of insurance commissioners of the United States. This committee was appointed at the last

the public, the cut in expenses must be such as to render it certain that the small and weak company would get little business, as it could not afford a larger inducement to the agents than what the larger companies are willing to pay. The larger companies would consequently get the best of the business, and would otherwise conduct their business at a less proportionate expense, as the ratio of fixed charges need be much less for a large company than for a small one.

The problem appears, therefore, to be one of great perplexity, and the commissioners as a whole have an important task set before them, both in the matter of making investigations to discover the real facts in the case, and in coming to a conclusion as to whether legislation will be of any advantage to the public, and if so, what that legislation ought to be.

But it is manifest that whatever is agreed upon and whatever legislation results should be uniform in es-

entials in all the States. A law in one State limiting expenses to 45 per cent., and in others to different percentages varying all the way down to 30 per cent., would make it exceedingly embarrassing for the companies, and might in fact be only a degree more tolerable than a situation in which every State would fix the rate of premium for all classes of hazards through its insurance commissioner or some State board, which would try to make those rates for its own State as low as possible, thus before very long having for each class of risks as many different rates as there are State-rating boards, all based on local and thus narrow and unsound considerations.

This suggests the pertinent question as to how long States without State-rating boards are going to permit companies which they have authorized to do business within their borders to continue to have such authority, if those companies remain in States which have State-rating boards, which, to please the insurers in those States, are constantly forcing down premiums to a level below that on the same class of risks in other States, and below a fair and legitimate rate. Although this may not be done with any thought of relieving one State at the expense of another, still that result would be the natural and almost inevitable outcome of a system by virtue of which each State has its own rate-maker, not yet brought into such relations with other similar officials as to consider broadly the interests of the country as a whole and not merely his own little portion of it.

This view of it must make it evident that uniformity in State laws relating to such vital matters as this is not only of concern to the insurance companies which do business in all the States, but is of supreme importance to the public. It is therefore worth the while to consider whether a much closer relation than now exists between the States in respect to insurance interests cannot be effected by the several States granting to their respective insurance commissioners, by statute, authority to act in certain matters upon an agreement having been reached, upon the questions involved, by the insurance commissioners of the country. Uniformity can come in these matters only as the result of conference and agreement.

New England Brevities.

R. S. Hoffman & Co., of Boston, have been appointed general agents for Massachusetts of the Eastern Casualty, the appointment having taken effect the 8th inst., and covering health and accident business.

Governor Draper has sent the following nominations for the Workmen's Compensation Commission to the executive council: James A. Lowell, Boston, chairman; Amos T. Saunders, Clinton; Eugene W. Alexander, Lynn; Henry Howard, Brookline, and Joseph A. Parks, Fall River.

In the Massachusetts Senate, last Friday, the committee on ways and

means reported a resolve that the director of the bureau of statistics shall investigate and determine the cost of establishing an old age pension system for county employes and also for State employes, and that he report his findings to the next General Court. He may employ experts, the expense to come out of the appropriation for statistics.

The New England Mutual Life has been admitted to Vermont, and has appointed as State agent Glenn A. Wielkins, of Morrisville.

Franklin B. Wentworth will deliver an address at the meeting of the Massachusetts Mutual Fire Insurance Union, to be held at Pittsfield, Mass., Friday of this week.

Charles Schuchhardt has been appointed to succeed Howard C. Buck as special agent of the Norwich Union for Connecticut, Western Massachusetts and Vermont.

The Standard Fire of Hartford has appointed W. D. Kellogg as its special agent for New York and New Jersey.

The annual convention of the International Association of Accident Underwriters is to take place at Bretton Woods, New Hampshire, from September 20 to 23, inclusive.

Following the resignation of Thos. Turnbull as secretary of the Hartford Fire, the directors have elected Frederick Samson and Sidney E. Locke secretaries in the underwriting department and have appointed Daniel J. Glazier recording secretary, who in addition to keeping the official records of the company, will assist President Charles E. Chase in handling investment matters.

The Aetna Indemnity is seeking re-admission to Colorado, from which it was ousted by former Commissioner Rittenhouse because of certain mining securities held among its assets. The company also hopes to get back into Minnesota soon, the company having been barred from that State also because of objection raised to certain securities. Since its reorganization the new management has been cleaning out the securities of questionable character and putting its investments in good shape.

George T. Wilson, vice-president of the Equitable, was the honorary presiding officer yesterday at the annual convention of the British agents of the company in London.

WON'T LET UP.

Hon. William H. Hotchkiss, New York's Superintendent of Insurance, has turned over to the district attorney at Poughkeepsie, to be presented to the Grand Jury, charges of mismanagement against the Dutchess Fire Insurance Company, which took over business and assets of the old Dutchess Insurance Company. Mr. Hotchkiss' examiners declare that the company's management has misrepresented its liabilities in reports to the insurance departments of several States, has carried out a reinsurance contract with the old company in a manner open to criticism, and adopted questionable methods to reduce its agents' balances in quarterly and annual statements of the department.

This is the new round of the fight between the Insurance Department and the Dutchess. It will be remembered that Hotchkiss demanded the head of President Vail, "for reasons," and the board of directors defied him, openly and flagrantly, by re-electing President Vail last week. Thus is the issue clear and unmistakable. The stockholders and directors deny the superintendent's supremacy and dictatorship of their affairs and—well, wait.

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.
Large surrender values.
Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in instalments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

POOR INSPECTIONS.**At Montreal.**

Monday's press dispatches contained two items of interest to both fire and liability insurance companies, as well as to employers, as illustrative of the intensive value of efficient inspection service.

One related the story of the collapse of the "Herald" building in Montreal, due to the excessive weight of its automatic fire sprinkler water tank on the roof, of some forty tons bearing. The loss of life is unknown, but will probably number fifty.

There were about 375 persons at work in the building, and reports vary as to the number of missing, especially from the top floor where the girls were at work in the bindery. Scores who were on the upper floors owe their lives to the prompt appearance of the firemen with extension ladders.

Flames broke out in the ruins; the gas pipes were broken and fed the flames which spread from the stereotyping furnaces and the typesetting machines.

The financial loss, according to the "Herald" management will reach in the neighborhood of \$500,000, mostly covered by insurance.

At Baltimore.

The nine-story warehouse of the Gwynbrook Distilling Company collapsed Monday with a loss of \$250,000.

It seems that the foundations of the warehouse were overtaxed by the superstructure and the rain of Sunday undermined them, causing the collapse.

These two incidents are fairly useful as indicating not only the inefficiency of some building architects, and municipal bureaus, so-called, but also that of the inspectors of the fire and liability insurance companies. Last week "The Chronicle" pointed out the value of efficient and competent inspection in the preservation of life and limb and the conservation of public energies. The Montreal calamity, following so close upon the heels of the Quebec bridge disaster, would indicate that the rule of incompetency prevails equally in this Western Hemisphere without the least regard for boundary lines or fishing disputes.

"If those who are selected for public service in legislature and parliament, municipal and national, would give attention to the people's interests, instead of building political hedges, there would come about some such civic conditions as exist in Switzerland, the model republic of the

world to-day," says a prominent underwriter.

Here at Home.

Now comes, right here in New York and since the foregoing was written, an instance of the ridiculous inefficiency of building inspection, a reminder of the building regime of Buddensieck, the notorious Tammany leader and contractor, who died in prison, because of the wholesale slaughter of people, due to his building tenement houses that crumbled to atoms almost before completed.

This occurred at Park Place, a block off Broadway, and in one of the most densely populated business sections of the city, and near the site of another collapse in 1891, in which nearly 100 people were killed and burned in the inevitable fire that resulted.

Commissioner of Buildings Miller says that the cause of the collapse might have been an explosion of gas between the ceiling and the floor of the second story. There is also a theory that printing presses on the third floor shook the buildings gradually into a dangerous state. The losses of the tenants may total \$75,000.

The other Park place disaster occurred on Saturday afternoon, August 22, 1891. An explosion in one of the upper floors of the Taylor building at 68-72 Park place caused the whole building, including many heavy printing presses, to fall on the heads of about a hundred people who were dining in the restaurant on the ground floor. Sixty-one bodies were recovered and twenty persons were reported missing after the accident.

How soon, with such careless inspection, will a steel skyscraper go down?

After July 1 the Texas agents of the Fidelity-Phenix will report to the home office in New York instead of to Chicago, the change being made to conform to the system of the Continental and the Fidelity Underwriters.

Commissioner Hartigan, of Minnesota, calls attention of the insurance companies to the requirement that all policies covering personal accident, health, employers liability, fidelity, surety, plate glass, steam boiler, burglary and theft, workmen's collective, credit, sprinkler leakage and automobile insurance, issued in that State, must be countersigned by a licensed resident agent.

The Provident Casualty Company, of Detroit, which has been writing industrial business for two years, has retired, owing to unprofitable business.

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the CONNECTICUT MUTUAL.

COME AND PROSPER

Among the 15 largest American companies (excluding industrials) this is our 1909 ranking:

First place in percentage of gain in insurance in force; third place in gain over 1908 in amount of paid-for new business.

New business first quarter of 1910 far in excess of first quarter of 1909. Our agents are busy and prosperous—and are not driven by the Home Office.

CONFERENCE ON EMPLOYERS LIABILITY AT CHICAGO.

The third meeting of the Conference on Compensation for Industrial Accidents took place at the Auditorium Hotel, Chicago, on June 10 and 11, meeting simultaneously with the Conference on Industrial Diseases and the American Association for Labor Legislation.

The conference was largely attended by members of the State commissions now in existence, including those of New York, Illinois, Wisconsin and Minnesota. No members of the New Jersey commission were present, and the Ohio commission, though provided for by the legislature, has not yet been appointed. Several other States, however, were represented by delegates appointed by governors; and among those present in this capacity were noted Hon. James V. Barry, Insurance Commissioner of Michigan.

In the absence of Hon. Charles P. Neill, United States Commissioner of Labor, who is chairman of the conference, H. V. Mercer, a member of the Minnesota commission and secretary of the conference, presided at all the meetings.

An Official Body Intended.

Permanent organization was completed by the adoption of by-laws which stated the purposes to be to bring together members of commissions, delegates appointed by governors and other persons, to discuss the subject, provided against resolutions declaring the principle or policy of the conference except by unanimous consent, constituted only members of commissions, delegates of governors and ten persons at large to be appointed by the board, voting members of the conference, and for associate members who are entitled to the privileges of the floor and to receive the publications. The conference elected a board composed of ten members, in addition to the five principal officers, and elected officers as follows:

Hon. Charles P. Neill, United States Commissioner of Labor, Washington, chairman.

Charles G. McCarthy, State librarian, Madison, Wis., vice-chairman.

H. V. Mercer, member of Minnesota commission, Minneapolis, secretary.

John B. Andrews, Ph.D., secretary of American Association for Labor Legislation, No. 1 Madison avenue, New York, assistant secretary.

Professor H. W. Farnum, Yale University, treasurer.

Subjects Discussed.

The subject for discussion was ex-

clusively the practicability of various provisions in a skeleton bill presented for consideration in accordance with a resolution adopted at the conference held in Washington early this year. The bill was discussed by sections, the discussion on the second day being limited, by reason of the limited time, to special topics selected by a committee appointed for the purpose.

The discussion was wholly upon a plan for workmen's compensation, the liability to fall upon the employers who might cover the same by insurance or not, as they preferred. The Wisconsin plan of permissive legislation with strong encouragement by diminishing the defenses against negligence suits, the New York plan partly permissive and partly compulsory, and the suggestion from Minnesota of a completely compulsory plan were all under discussion. In addition to this the special questions as to whether compensation should be paid in annuities or lump payments, of whether the right to proceed under the common law of the employers liability acts should be retained and of whether compensation should be confined to extra-hazardous employments were given special consideration.

International Congress Invited Here.

Resolutions were adopted, both at the meeting of the American Association of Labor Legislation and at the meeting of the conference, inviting the International Congress of Social Insurance to meet in the United States in 1912, and appointing and authorizing the following to represent the conference and the American Association at the International Conference upon Social Insurance and Employers Liability, to be held at The Hague early in September:

Hon. Charles P. Neill, Commissioner of Labor, Washington, D. C.

H. V. Mercer, Minneapolis, Minn.

John B. Andrews, Ph.D., secretary

of American Association for Labor Legislation, New York.

Miles M. Dawson, consulting actuary, New York.

Lee K. Frankel, of the Metropolitan Life Insurance Company, of New York.

William H. Tollman, Ph.D., American Museum of Safety and Hygiene, New York.

Rumors are rife that the United Surety would reinsure if they can find a taker. It is reported that the Fidelity and Deposit had negotiated unsuccessfully.

AMERICAN BONDING DENIES.

More or less reliable statements have appeared in the New York press during the week to the effect that the Maryland Casualty and the American Bonding, both of Baltimore, had, would or could arrive at a satisfactory agreement by which the former would absorb the latter, lock, stock and barrel, at \$85 per for \$25 par value shares.

This aroused much interest all over the country and inquiries have been pouring into this office. That negotiations for the reinsurance or merging of the American Bonding have been tendered during the past two or three years has been common gossip in the street. That these negotiations were inspired or initiated by that company is not in evidence, and the fact that nothing resulted would seem to confirm the impression that they came from outside and probably hostile sources.

On Monday President Cator, of the American Bonding Company, announced that the board of directors and the executive committee had most cordially and unanimously resolved that no proposal of a sale or merger would be entertained.

Latest.

Yesterday "The Chronicle" received the following from the agency department of the American Bonding Company in response to a wire to the president:

In accordance with your wire of even date reading as follows, to wit:

"Please mail to-day any statement desired for this issue re purchase your company by Maryland Casualty," I am directed by Mr. Cator to state that the executive committee and board of directors of American Bonding Company of Baltimore, at a meeting held on the 13th instant, unanimously expressed their opposition to either sale or merger of the company. The daily papers of to-day contain the notice of withdrawal of proposition of merger promoters.

This confirms the story that negotiations had been held.

UNITED SURETY CHANGES.

Editor "The Chronicle":

I enclose herewith, memorandum which I shall be glad to have you use as a notice of the resignation of Ernest J. Clark and myself from the United Surety Company.

Yours very truly,

HENRY G. PENNIMAN.

The Memo.

Baltimore, Tuesday (Special).—At a meeting of the board of directors of the United Surety Company, held at the offices of the company to-day, the resignations of Henry G. Penniman, as president, and Ernest J. Clark, as

first vice-president, of the company, were tendered and accepted.

Mr. Penniman and Mr. Clark were not in accord with the interests now in control of the company, and resigned in order that the owners of the company might be free to carry out their own plans.

Mr. Penniman and Mr. Clark have directed their efforts almost entirely to the producing and underwriting of the company's business, the by-laws providing that the management of the company's finances should be vested in a finance committee over which they had no control. The premium income of the company increased greatly under their management and the past difficulties of the company did not arise from the character of business so written, but were caused by losses in other departments of the company over which they had no control.

The resignations of these two officers were accepted by a resolution expressing the thanks of the company for the energy and attention they have given to its affairs during the years they have been connected with it officially.

The differences referred to in this statement, apply specifically to the fact that Mr. Penniman and associates offered to buy the treasury stock of the company at a price considerably above par, so as to place the company in a very much better financial position by greatly increasing its surplus, but this proposition was voted down at a stockholders' meeting by the present control of the company, the minority stockholders voting for the proposition, this resulting logically in the resignations already mentioned.

The New Executive.

Immediately following the resignations mentioned the board elected Edgar Allen Poe as president, and Robert A. Dobbin vice-president and secretary. Mr. Poe is a well seasoned surety man of some fifteen years' experience with the Baltimore companies. Mr. Dobbin has been secretary of the company since its beginning and has had abundant experience to qualify as as able an executive as any of the younger generation. Things will move one way or another under this new arrangement.

Billington, Hutchinson & Co. of New York, Philadelphia and San Francisco, have been appointed general agents for California for the automobile department of the Marine Insurance Company, of London. The company is well and favorably known in insurance circles. It has operated for twenty-six years, writing marine risks, and its automobile department is a comparatively new feature.

THE SURETY BOND.

The Quick Rank It Has Taken as a Prime Conservator of Credit and Ability.

The general demand for some sort of a guarantee of promises, older than the Garden of Eden, has progressed as humanity—or, rather, human nature—has progressed, in about the same ratio as governments—military, monarchical, despotic, or republican—have advanced. In the old days of the "Mediterranean Merchants" there were only two collaterals, a deposit of barter, or honor, and to the latter is due the credit for the immense traffical structure erected thereon.

Now comes the surety company, acting as a guarantor, as a fire insurance company acts as indemnitor for fire loss, or as the casualty company does in case of loss of wage or salary to the policyholder.

A few years ago one of the surety companies, then an inconsequential concern, took up this intermediary guarantee business. It proposed the endorsement of warehouse receipts for goods in storage, for a valuable consideration, as per law. It seemed good. And on its face it looked good. But the results proved that the average of human nature in the cotton business—by telegraph—was considerably lower than in the minor trades of life.

The recent going into receivership of the Knight, Yancey & Co. concern, of New York, Liverpool and principally of Decatur, Ala., reveals that forged bills of lading, representing a "short" market in Europe, had been negotiated, borrow-wise, over there, and that the staid and solid old Atlantic Mutual and the North America had unsuspectingly issued marine policies on these never-was and never-to-be cotton bales to the extent of \$60,000 in premiums, which, to their everlasting and eternal credit, be it said, they promptly returned to the receivers on learning of the "kite," and now our cotton doblers across the sea, as well as the "foreign exchange" departments of the home banking concerns, are up in arms.

"Give Us a Bond."

"Give us a bond," has been the growing cry in America ever since Rawlings started his original Guarantee Company of North America, inoculated the whole of America with his splendid fidelity bond idea and started a development that to-day marks the boundary of a new era in what was formerly called insurance, later indemnity, and is now coming to be known simply as economics.

To get back to the cotton

warehouse receipts. The National Surety was the first to reduce the subject of their guarantee as a banking collateral. A loss seemed improbable because cotton bales are not the usual prey of the night-time burglar. There was fire insurance to cover that hazard and so the guarantee of the surety company seemed to resolve itself solely into a matter of integrity on the part of the principal. Then came the awakening, ancient history now, in surety circles.

As indicated by "The Chronicle" last week, the four larger surety companies have taken the subject under consideration with a view to a system of inspection and ironing that may eliminate the Knight-Yancey humbug possibilities.

The companies concerned are the American Surety Company, the National Surety Company, the Fidelity and Deposit Company of Maryland, and the United States Fidelity and Guaranty Company, of Baltimore. A representative of one of the companies has been abroad in consultation with the exchanges and is now about to start South with two other representatives of these four surety companies to investigate conditions governing the issuance of bills of lading. They will formulate a report upon which will be based the decision of the companies as to whether or not they will undertake the business. They are being strongly urged to do so by important banking interests here, and in this demand the foreign purchasers of cotton and the banking institutions which accept drafts in their behalf are joining with a view to protecting themselves against a repetition of the losses which were uncovered following the bankruptcy proceedings against Knight, Yancey & Co. and Steele, Miller & Co.

Losses Heavy.

These losses amount to more than \$3,000,000, several important concerns abroad and one or two in this city being victimized to the probable extent of \$400,000. The distrust created by these losses, particularly abroad, is so great that leading banking interests feel it is imperative that protection for cotton bills of lading be provided before the beginning of the next cotton movement this fall. The effort to obtain a guaranty issued jointly by the four surety companies is due to this belief on the part of our bankers. Many other plans have been suggested, but so far this is the only one which is regarded as offering the full measure of protection which bankers here and abroad are demanding.

Shipments of cotton made on

through bills of lading from points in the South to points abroad amount annually to \$400,000,000 or more. Should the distrust aroused by the recent experience of foreign bankers with American cotton bills bring about any check to this annual cotton movement the results to cotton interests here would be serious, even if it did nothing more than force cotton merchants to finance the shipment of cotton to American ports instead of being able, as they have been in the past, of drawing on the foreign purchaser of the cotton so soon as the cotton is shipped from the place of production.

Latest.

At a conference yesterday afternoon, held at the instance of President Joyce, of the National Surety, the four big guaranty companies and several leading banking and foreign exchange houses considered the warehouse receipt and bill of lading subjects, with a view to meeting and averting the complaints and losses recently sustained by the Liverpool cotton importers, due to fraud and forged documents.

The surety companies will decide their action at an early date, which is especially desired by the New

York bankers, because it is expected that London bankers and Liverpool importers will announce their views on the subject next Wednesday.

Among the bankers present were John E. Gardin and Joseph T. Talbert, vice-presidents of the National City Bank; Max May, vice-president of the Guaranty Trust Company; F. I. Kent, vice-president of the Bankers Trust Company, and Walter E. Frew, vice-president of the Corn Exchange National Bank.

Welding Ring, representing the New York Chamber of Commerce, goes to Washington to-day with representatives of the New York Produce Exchange and the New York Cotton Exchange to confer with the Senate Interstate Commerce Committee on the Stevens bill (H. R. 25,335), which fixes the responsibility of carriers in issuing fraudulent bills of lading. This bill has already passed the house.

MADE IN GERMANY.

At the Badische Aniline and Soda-Fabrik in Germany a prime consideration is the elimination of all possible danger to the workmen. Machinery is fenced off or screened, while placards are affixed to dangerous apparatus for use or caution. Special attention is paid to the sanitary arrangements. Rooms are high, well lighted and ventilated, with the latest devices for purifying the air. Workmen obliged to work in connection with steam apparatus, or in high temperatures, are furnished during working hours with coffee free of charge, in order to prevent the excessive drinking of ice water. In the color works the operatives are obliged to bathe regularly before leaving the works, the time for the bath being allowed during working hours. Soap and towels are supplied free. The cost of building the baths amounted to nearly \$180,000.

Prof. Jeremiah W. Jenks, the Cornell economist, estimates that sickness in the United States causes a loss of thirteen days on the average for each inhabitant, with a monetary loss of more than a billion dollars per annum, a loss of probably a quarter-billion through minor ailments for which no physician is called.

It is estimated that at least two elevator accidents happen each and every day of the calendar year. Ninety per cent. of them are due to carelessness on the part of the passenger. The pecuniary loss from damage suits in connection with this class of accidents is very large.

ANOTHER BUBBLE BURSTS.

A few weeks ago the stockholders of four prematurely accouched casualty concerns received an elaborate proposal to merge them into a "strong central holding company," or something like that. It was called the Columbus Securities Company of New Jersey and hoped to reside in Philadelphia, the principal town in Pennsylvania, made famous during the week by a man getting there from New York and back in an air machine in one day.

The prospectus sets forth most alluring figures of casualty and surety companies profits. One company had averaged over 80 per cent. per annum for 25 years, etc., etc. It also named the four concerns that it was proposed to merge. Of these it was well known to the underwriting world that not one was really worth salvaging. Now comes double confirmation of that knowledge. One, the Empire Casualty, of West Virginia, residence Philadelphia—has since gone into a receiver's hands; and now another—the Columbus Casualty, of Ohio—has been ordered by the State to pay up its obligations or stop its pretenses. Various irregularities are charged. Thus 50 per cent. of the new concern's field has already disappeared. There remains two small Pennsylvania concerns—three have been reported—that were in on the deal, as reported in "The Chronicle" two weeks ago. These were also premature birthlings, without pride of ancestry or hope of posterity. The sign of the promoter was written clearly on their ledgers.

The courts of Kansas City have ruled that claims against mutual and inter-insurance concerns may be filed against the manager, and that any judgment against him will be binding on the members. This ruling was made in claims against the Printers' and Publishers' Reciprocal Underwriters of Kansas City.

NEW YORK

MARK TWAIN'S VISION.

"Here, from his autobiography," said the New York "Times" on the occasion of Mark Twain's death, "is a terrible visualization of some of those statistics which seem so meaningless when we gaze blankly at printed tables. With his usual dramatic method, he introduces it with a reference to Tennyson's verses forecasting a future when air-borne vessels of war shall meet and fight above the clouds and redden the earth below with a rain of blood. Then he introduced his statistics that on our 200,000 miles of railway we annually kill 10,000 persons outright and injure 80,000. Now for the picture:

"I had a dream last night. It was an admirable dream, what there was of it.

"In it I saw a funeral procession; I saw it from a mountain peak; I saw it crawling along and curving here and there, serpent like, through a level, vast plain. I seemed to see a hundred miles of the procession; but neither the beginning of it nor the end of it was within the limits of my vision. The procession was in ten divisions, each division marked by a sombre flag, and the whole represented ten years of our railway activities in the accident line. Each division was composed of 80,000 cripples, and was bearing its own year's 10,000 mutilated corpses to the grave; in the aggregate 800,000 cripples, and 100,000 dead, drenched in blood."

NOT AN ACCIDENT.

The Casualty Company of America, through President Edwin W. DeLeon, has given out the official report or the autopsy in the case of Charles C. Dickinson.

It will be recalled that Mr. Dickinson, a prominent financier of this city, was reported as having inhaled the noxious gases from a chemist's crucible in which he believed certain of the base metals were being transmuted into gold or silver. He held an accident policy for \$50,000 in the Casualty Company of America and the right of claim hinged upon the mere question as to whether or not his death a week after the alleged incident was an accident.

The funeral certificate gave pneumonia as the cause of death. The autopsy confirmed it, according to the following statement given out by President DeLeon:

We have received the report of our physicians on the autopsy on C. C. Dickinson, and the conclusions reached indicate that death did not result from accidental causes. We have not yet received proofs of claim from the beneficiary, and we are,

therefore, not informed at this time upon what basis claim will be made.

COMMERCIAL UNION CONTROLS THE OCEAN.

The Commercial Union Insurance Company, of London, which was admitted to this country to do a fire insurance business only, acquired on the 14th inst., under a general agreement with the stockholders of the Ocean Accident and Guaranty Corporation, the largest company engaged in the casualty business in Great Britain, all the stock of the Ocean, paying \$35 in cash for each share and \$25 in debentures. The paid-up value of the shares was but \$5.

It is announced that the business of the casualty departments of the two companies will be merged, but that the management of the Ocean will be carried on separately as before, all the casualty business being turned over to it.

The Ocean, which was founded in 1871, opened a United States branch in 1895, which at first did a credit business only; but in more recent years, under the same manager, Oscar Ising, has engaged in general casualty business as well, producing in 1909 a net premium income of \$2,636,115.

The Statistical Service Company is being organized in Chicago to classify and record statistics for fire insurance companies by mechanical devices, furnishing records on reserves, classifications, etc., to the companies more promptly and more economically than their own force can do it, according to the claims of the promoters.

A commission consisting of three men to be appointed by the governor to regulate fire insurance rates will be the provision of a bill now being drafted by the New Orleans Board of Trade, under the chaperronage of Commissioner McGivney.

HOME OFFICE OF THE Metropolitan Life Insurance Co. (INCORPORATED BY THE STATE OF NEW YORK, STOCK COMPANY) The Company OF the People, BY the People, FOR the People

PROOF OF PUBLIC CONFIDENCE

This company has more premium paying business in force in the United States than any other Company, and for each of the last 16 years has had more New Insurance accepted and issued in America than any other Company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburg, Baltimore, New Orleans and Buffalo.

ASSETS.

Municipal and R. R. Bonds and Stocks	\$123,346,161.39
Bonds and Mortgages	105,183,172.02
Real Estate	23,311,215.72
Cash	5,420,643.42
Demand Loans on Collateral	172,930.00
Loans to Policyholders	11,193,245.61
Prem. deferred and in course of collection (net)	5,190,288.45
Accrued Int., Rents, etc.	3,290,211.85
Total	\$277,107,868.49

LIABILITIES.

Reinsurance Fund and Special Reserves	237,213,384.00
All other Liabilities	9,992,264.48
Capital and Surplus	29,902,219.98
Total	\$277,107,868.49

Largest Office Building in the World—Madison Avenue, Fourth Avenue, 23d Street and 24th Street, New York City.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1909 WAS:
456 per day in number of Claims paid.
6,535 per day in number of Policies placed and paid for.
11,463,755 per day in New Insurance placed and paid for.
\$183,403.75 per day in Payments to Policyholders and addition to Reserve.
\$132,172.72 per day in Increase of Assets.

OFFICERS

INSURANCE COMPANY

ESTABLISHED 1836. ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS	\$13,885,802.88
LIABILITIES	8,766,622.58
SURPLUS	\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income.	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of..... \$2,710,650
And increase of assets in the same time of..... 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the Company's business, convinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

 Curtate Summations of D Column.
 Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
 Divide temporary insurance values by immediate temporary annuities.
Computing Annual Endowment Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.
Computing Annual Pure Endowment Premiums:
 Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
 By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
Computing Annual Semi or Double Endowment Premiums:
 Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
Computing Limited Premiums:
 Divide the proper single premiums by immediate temporary annuity.
Computing Surrender Values:
 Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
Extended Insurance with Fractional Paid-up Endowment:
 Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
Computing Terminal Reserves:
 Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
 Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
 Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
Warranted Commissions for New Business.
Surrender Values.
Dividends.
 For these purposes the "select and ultimate" will be most useful.

The Sun's 200th Anniversary.

**"The Sun," of London, Celebrates Its
Bi-Centennial.**

The annual general meeting of the Sun Insurance Office, at the head office of the company, 63 Threadneedle street, London, Eng., on June 1, was a celebration of the 200th anniversary of the company. It showed resources of \$16,000,000 in cash and invested assets, with revenues for the year of nearly \$19,000,000.

An interesting feature of the meeting was the report of the chairman, which included an account of the origin and foundation of the company on April 7, 1710. The founder was Charles Povey, a very remarkable man, a man of great energy and versatility, of varied interests, far-sighted, thoughtful, dreamy, but rather eccentric. Mr. Povey was the author of no less than twenty publications upon all sorts of subjects, particularly pertaining, however, to domestic, economic and social evils, and the remedy for the same. He was in 1705 the publisher of a magazine, "General Remarks on Trade," which gave place to the "British Mercury," which was published by the Sun Fire until 1720 and by other parties until 1738.

Povey Founds "The Sun Office."

In 1709 Povey, who had already been experimenting with fire insurance, decided to start "The Company of London Insurers." This he actually carried out in 1710, and the office, on account of its adoption of the sun as its emblem and mark, was commonly called "The Sun Fire Office." It was the first company to extend its fire

insurance business throughout Great Britain and Ireland and to insure "buildings as well as movable goods."

A Co-Partnership.

The institution was founded by a "deed of co-partnership," there being twenty-four members, each of whom contributed £20, that is, about \$100. The following are three of the most important provisions of the deed:

(1st) That those who sealed and delivered the presents should form a company which should never exceed 24 distinct persons, and that if any share or interest should devolve on a female or infant a deputy should be appointed to act.

(2nd) All losses were to be borne by all members share and share alike, and calls were to be made when required.

(3rd) Profits were to be divided equally amongst the members, and there were other provisions.

As it was provided that the receipts for payments made to the other companies organized by Povey should be accepted for cash in the payment of subscriptions, it is said that "there is reason to believe the new company practically started without any capital."

At the outset the liability was limited and losses up to £500 were to be paid only "if there should be a sufficient amount of money in the bank to satisfy all claims that shall happen in that quarter."

Each person insured was entitled to receive the "British Mercury" three times a week, and arrangements were made for fighting the fire as follows:

There are now actually taken into the service of the company 30 lusty, honest, able-bodied firemen, who are clothed in the liveries and silver badges with the Sun marked upon their arms, who will always be at

hand to assist in quenching fires or removing the goods, etc.

Re-Organization in 1720.

By 1720, according to the chairman's report, "it was considered that the risk was too great for twenty-four persons to bear and it was resolved on September 2, 1720, that each of the twenty-four shares be divided into 100 parts and members were to be at liberty to transfer the whole or a part." This brought the number of shares up to 2,400. £5 per share was called, and there was an intention of calling £15 more, but instead 2,400 new shares were created and £15 each was paid. This gave the institution a real capital of £48,000, divided into 4,800 shares. In 1741 the profits were capitalized to the extent of £24,000, and in 1752 again to the extent of £28,800, bringing the capital up to £100,800.

"Sun Life Office" in 1810.

In 1810, one hundred years after its establishment, the Sun Life Office was founded by the Sun Fire Office, but as a separate society. Four thousand eight hundred shares of £100 subscribed value, £10 each to be paid, were issued, the option being given to the holders of the Sun Fire Office's shares, and a special bonus of £10 per share being declared by the Sun Fire Office to enable the new stock to be subscribed and paid for. The Sun Life Office was for a time under the same management, but this has not been true now for many years.

Extends to Other Countries.

In 1836 the Sun Fire Office extended its business for the first time be-

(Continued on Page 3.)

HUGHES DEMANDS GENERAL INVESTIGATION.

Underwriters are naturally very much interested in the portion of the message of Governor Hughes transmitted to the special session of the New York Legislature on Monday evening of this week, in which he insists that the bill providing for an investigation of legislative and official misconduct should not be hampered by various provisions inserted in the same, while it was before the assembly, apparently for the direct purpose of preventing the investigation from being thoroughgoing and radical.

It is pointed out that by giving the committee full power it is not required to run down every trifling thing which is brought to its attention, but also that if it is not given full power its time and attention may be frittered away by the bickerings of attorneys, by the necessity for formal procedure and the like, and also that the scope of the investigation may be so limited that nothing worth while would be accomplished.

The following is the text of his recommendation in these regards:

Governor's Recommendations.

I further recommend for your consideration the subject of giving a more ample authority for the investigation into corrupt and improper practices in connection with legislation. The disclosures of the past session in the inquiry held by the Senate, and the results of the examinations conducted by the Superintendent of Insurance, created a general conviction that there should be a general complete investigation with regard to abuses of legislative methods. In my message to the legislature of April 11, 1910, I recommended that provision should be made for an inquiry which should be immediate, impartial, thorough, and unsparing. A concurrent resolution has been adopted by your honorable body for the appointment of a legislative committee of investigation. An examination of this resolution, however, has led me to the conclusion that it is important to the public interest that the authority of the committee should be enlarged.

No one can favor the exploiting of baseless rumors or the subjection of the innocent to unjust and harrowing suspicion; but, on the other hand, every effort should be made to disclose, and, if possible, to punish, those who have perpetrated through legislative corruption the greatest wrongs from which the State can suffer. It is due to the people of the State that those who have betrayed their trust or have poisoned the springs of government should be uncovered and branded, and that whether or not this result can be attained, the adequacy

of the measures taken to that end should be such as to secure the public confidence.

Committee Should Have and Use Discretion.

Your committee cannot act outside its powers, and, with respect to a subject not confided to it, it will possess no authority and can compel no evidence. A committee with proper power may use its discretion reasonably to prevent its inquiry from being made an instrument of injustice, but it should have the power essential to accomplish the purpose of its being.

The resolution provides specifically for the investigation of "all corruption and corrupt practices shown to exist by the evidence in the recent investigation had before the senate of the State of New York," and "all matters indicating corrupt practices in connection with legislation which developed in the recent investigation conducted by the Superintendent of Insurance."

It is well that the matters thus referred to should be the subject of inquiry. But the interest of the people of the State is not confined to an investigation of the corruption shown in the senate proceedings or indicated by matters developed in the examination conducted by the Insurance Superintendent. It is just as important that corruption should be exposed whether or not it was brought to light or indicated in those particular investigations.

Verified Charges Not Necessary.

But with respect to other corrupt practices, not so shown or indicated, the resolution provides that the committee is to proceed upon a "specific charge, verified upon knowledge, of corrupt practices of official misconduct in connection with legislation or the legislature or with any matter or proceeding before any State department, board, body or officer."

I have not overlooked the general clause of the resolution relating to any other matters pertaining to the conduct of the business of the State and its officers, but there is danger that its general words may be deemed limited by the specific language above mentioned with respect to corrupt practices. In such a matter there should be no ambiguity.

Representation by Counsel Bad.

The resolution further provides that "any person charged with official misconduct shall be entitled to be represented by counsel and to subpoena and examine and cross-examine witnesses."

It thus contemplates with respect to such matters a virtual trial upon specific charges verified upon knowledge by those who present them. This provision is of such a character and the probability of specific charges verified upon knowledge being presented is so slight that it would seem likely that the actual investigation by the committee of corrupt practices would be limited to what was shown in the senate inquiry or developed before the Superintendent of Insurance. I believe that this is a mistake and that the purposes that your honorable body had in view in providing for an investigation will be attained only by giving such authority to the commit-

tee that it may neither be ignored nor be defied, trusting to its discretion to conduct the investigation in a thorough and at the same time just and reasonable manner.

The Purpose Remedial Legislation.

It should also be remembered that the function of the committee is to investigate to the end that such remedial legislation may be enacted or change of method in the conduct of public business be adopted as will prevent a recurrence of any abuses or evils disclosed. To accomplish this result, I believe, it would be better for the committee to proceed as an investigating committee and not be resolved by a required course of procedure into a trial court.

I also question the wisdom of limiting the power of the committee with respect to charges of official misconduct against candidates for office to those that may be received before September 1, 1910. This may be questioned quite as much in the interest of those unjustly accused as in the interest of the people at large. If charges sufficiently grave to warrant the attention of the committee are currently reported it will not help matters that they may not be the subject of investigation by the committee. If on the other hand the charges are mere baseless rumors designed unjustly to affect a candidate for office, the power of the committee to make a prompt examination will tend not only to discourage their circulation, but will afford an instant opportunity to expose their worthlessness.

I make this recommendation to the end that nothing should be lost through want of power or thoroughness, and believing that a proceeding conducted broadly and with directness at this opportune time will not only result in an improvement of methods with respect to legislative action and procedure, but also protect the honor and dignity of officers of Government who, in the main, in and out of the legislature, are honorably striving to do their duty, and who detest and desire to eradicate the corrupt and improper practices of the few by which they are involved in an unjust and common reproach.

Had Armstrong Committee Been So Limited?

Unquestionably, had the investigation by the Armstrong committee been so restricted, limited and ham-

1860 50th YEAR 1910

HOME LIFE

Insurance Company of New York.

GEORGE E. IDE, President.

Assets	\$23,626,018.63
Liabilities	21,858,691.52
(Including Deferred Dividend Fund)	
Dividend Endowment Fund	2,119,044.00
(Deferred Dividends)	1,767,327.09
Net Surplus	92,532,583.90
Insurance in Force	

The record for 1909 shows the following GAINS:

Insurance in Force	\$4,164,239.00
Assets	1,917,117.00
Deferred Dividend Reserve	148,581.00
Contingency Reserve (Surplus)	655,149.17

pered, many of the most important matters brought out during the investigation would never have seen the light. The amount of work to be performed rendered it absolutely necessary that the most direct and simple processes should be employed, with a view to bringing to light not matters which would cause indictments, and much less with a view to conducting the transaction as if an actual conviction were intended, but instead with a view to preventive legislation. The same thing is evidently imperatively required in the present instance.

Silent on Investigation of Insurance.

It is especially significant that the governor is entirely silent as to the investigation of insurance. His silence upon this point and his insistence that the investigation shall concern itself with its prime object, which is to uncover official and legislative evils and provide against the same, is a plain indication that he does not expect this investigation to turn upon evils in the conduct of insurance companies. At the same time he does not express any desire to eliminate any of those fields of investigation, and, therefore, fire insurance and other forms of insurance, except life (but including industrial life) will fall to be investigated. Since the governor has so strongly emphasized, however, the duty of the committee to address itself to legislative and official misconduct and evils, it will hardly be possible for the committee, even if so disposed, to divert public attention upon the false scent of the mere investigation of company management.

Hard Sledding in the Assembly.

The recommendation of the governor that the investigation resolution be amended, has struck an unexpected snag in the assembly. The rules which govern the regular session were adopted before the governor's message was received. These rules do not admit of an amendment of a resolution which has been passed. In consequence, a new resolution, offered to amend the same, has been declared out of order by the speaker. The whole matter, therefore, will remain in the hands of the ways and means committee, it being free to act upon its own initiative or to refuse to act. It is said that the committee is safely and strongly against taking any action.

A meeting of the executive committee of the American Life Convention has been called to meet in the offices of President Hamilton, of the Federal Life Insurance Company, in Chicago, on Friday of this week.

TUPPER TO MANAGE BANKERS LIFE.

Wilbur S. Tupper, formerly president of the Pacific Mutual Life Insurance Company, of Los Angeles, and more recently manager of the Liberty Life Insurance Company, of this city, has resigned the latter position and assumed, on the 21st inst., his duties as vice-president of the Bankers Life Insurance Company, of New York, with charge of the underwriting operations of the company. He is to have a free hand in developing agents and agencies for the company and generally in its entire underwriting management.

Vice-President Tupper has been regarded the most remarkable success in agency promotion and management and in the building up of a life insurance company, that has been known in the United States in recent years; and the Bankers Life is especially fortunate in securing his services.

The Bankers Life Insurance Company closed the year 1909 with assets of \$1,412,549.29; with surplus to policyholders, including its \$100,000 paid-in capital, of \$232,578.28 over all liabilities, including reserve. In addition to the usual forms of policies it issues thrift policies in denominations of from \$250 to \$900, and monthly premium policies.

Mr. Tupper departs from the service of the Liberty Life Insurance Company with the best wishes of his associates and solely because a more favorable opportunity for the exercise of his undoubtedly great talents had opened to him.

THIRD CONVENTION OF SOUTHERN STATES AGENTS.

The agents of the Southern States Life Insurance Company of Atlanta, Ga., closed, on Wednesday, June 15, their third annual meeting, which was a great success. Membership in the "Anniversary Club" of agents is confined to those who have secured at least \$100,000 paid-for business during the year and no less than eleven of the company's agents qualified for membership.

William L. Meador, general agent at Atlanta, was elected president, succeeding Hugh N. M'Affee, of Atlanta, who was in turn elected second vice-president. J. W. Vinson, general agent at Blakely, Ga., was elected first vice-president.

Seven prizes had been offered for the largest volume of business produced, being trips to New York City, expenses paid, to participate in the reception of ex-President Roosevelt. The first prize was won by Hugh N. M'Affee for the largest volume of

business obtained; the second, by Daniel A. Leon. The other prize-winners were J. C. Yates, Nashville, Ga.; W. E. Hubbard, of Locust Grove, Ga., and W. M. Alexander, of Moultrie, Ga. Mr. Alexander, however, died suddenly on Monday, June 6, H. Willis Hogg, of Viena Vista, Ga., and J. R. Blake, of Abbeville, S. C., were also among the winners.

Robert F. Moore, agency director of the company, was reappointed secretary of the Anniversary Club.

THE SUN'S 200TH ANNIVERSARY.

(Continued from Page 1.)

yond Great Britain, but only six years later, in 1842, a great fire at Hamburg, involving a total loss of £120,000, fell upon it so heavily that no further extension was made abroad for many years. In 1882, however, a branch was established in the United States at Watertown, N. Y., by the purchase of the business of a small American company. In 1906, though the company lost in claims £350,000, its strength was so great "that the managers did not hesitate to make an addition to the ordinary dividend that year." All the claims that could be settled promptly were paid within four months.

From the very foundation until 1892 the board of directors elected others to take the place of those who had died or resigned, and no meetings of shareholders were held, no reports issued and no accounts rendered. Under the act of parliament, taking effect in 1891, this condition was changed, and since that date the management of the company has been along the same general lines as that of other corporations.

The history of the Sun Fire Office is one of the most remarkable records of achievement, taking into account the two sentiments covered by its career, in the annals of insurance in any country.

HARTFORD LIFE

INSURANCE COMPANY, OF CONN.

1909 Policies are Participating, or Non-participating, with Lower Rates and Values based on FULL RESERVE.

For Right Contracts,
Address, Second Vice-President,
Home Office, HARTFORD, CONN.

GRANNISS INDICTMENT DISMISSED.

Hon. Alfred R. Page, justice of the Supreme Court, who was, while in the senate, known as the chief champion of Gov. Hughes and his policies, has just dismissed the indictment that has stood for four years against Robert A. Granniss, formerly vice-president of the Mutual Life Insurance Company. Mr. Granniss, together with Dr. Walter R. Gillette, another vice-president of the company, was at one time indicted for forgery in connection with the preparation of a certain annual report of the company; but this indictment was dismissed after the decision of the Court of Appeals in the case against President Hegeman of the Metropolitan. The only indictment remaining against Mr. Granniss was for a misdemeanor in assisting in the preparation of a report which he did not sign.

No Proof of Improper Intent.

The indictments are dismissed upon the recommendation of District Attorney Whitman and Assistant District Attorney Moss. In these recommendations it was pointed out that it is an open question whether there was any improper intent in omitting certain items; and the inquiry is made why Mr. Granniss, who never signed the report, was indicted while others who did sign it, were not. The communication says "the Grand Jury determined to indict Mr. McCurdy, the president of the company, but reconsidered the indictment on the advice of Mr. Jerome."

The arguments presented by Mr. Jerome, why Mr. McCurdy should not be indicted, it is pointed out, would have applied with greater force to the indictment of Mr. Granniss.

A Very Stale Case.

The following is a part of the recommendations of the district attorney to the court:

The indictment is directed against one man who did not sign the report and as to whom there is no proof of direct participation in its framing. The defendant is charged as one who participated in preparing it. No other participant was indicted. It seems likely that this misdemeanor indictment was obtained in aid of the forgery indictment which has been dismissed. It seems to me that the finding of it was inconsistent with the recommendation that the indictment against McCurdy be reconsidered. It is a very stale case, and I see no probability of success.

These recommendations went first before Supreme Court Justice Vernon M. Davis, who is sitting this month in the criminal branch of the Supreme

Court; but, as he is a policyholder in the Mutual Life Insurance Company, he declined to act. It was then taken before Justice Alfred R. Page, who signed the order in chambers.

Mr. Granniss was represented in the proceedings by Howard Gans, a former member of the staff of District Attorney Jerome.

BOOK REVIEWS.

F. A. Williams, F.A.S., actuary of "La Nacional" Life Insurance Company of the City of Mexico, has prepared full preliminary term tables by the American experience table and 4 per cent. interest, for the usual forms of policies which he has printed in a volume of 64 pages, neatly bound in cloth and selling at \$10. The tables are net premiums, terminal and mean reserves, for 9, 15 and 19-payment life and 9, 15 and 19-payment endowment; also values of temporary annuities, due.

The International Insurance Encyclopedia, volume 1, "Insurance Men, Past and Present," a volume of 700 pages, giving a brief biography of men who have been prominent in insurance circles in all countries, has just been issued. It is furnished, either in cloth, three-fourths morocco or full morocco binding, but only upon subscription to the entire seven volumes, of which this is the first. All orders should be sent to the American Encyclopedia Library Association, 22 Thames street, New York City.

President Hamilton, of the Federal Life Insurance Company, announces that T. W. Appleby, now secretary and actuary of the Central Life Insurance Company of Ottawa, Ill., has been elected secretary and actuary of the Federal Life Insurance Company, and will enter upon his new duties July 1. W. E. Brimstin, who has been acting as secretary of the Federal since R. M. Wilbur resigned his position, has been elected assistant secretary and assistant actuary.

James J. Hill, in an address in St. Paul, before the Brotherhood of Locomotive Firemen and Engineers, warned the men to go slowly with their living expenses, and to save something for a "rainy day," which, he said, "may come at any moment," and which will not last a few months, as in 1907, but will be here for some time." Now is the time to insure incomes.

Charles E. Gardner, for many years in the insurance business in this city, died Sunday at his home in Middletown, N. Y., in his 69th year.

NORTHWESTERN AGENTS TO MEET.

The agents of the Northwestern Mutual Life Insurance Company, of Milwaukee, will meet at the home office on July 19 and 20, at which meeting the following papers will be read: "Goblins of Life Insurance," by John I. D. Bristol, manager, from New York city.

"The Future of the Business," by Robert Reid, of the New York agency.

"Suggestion as Applied to Insurance Salesmanship," by Dean J. R. Street, of the Teachers' College of Syracuse University.

Among the other speakers announced are Hon. Charles Dyer Norton, secretary of President Taft and formerly Chicago general agent of the Northwestern; W. B. VanDyke, son of a former president and himself the newly elected vice-president of the company, and President Markham.

The contract for constructing the steel lock gates for the Panama canal has been awarded to the McClintic-Marshall Construction Company, of Pittsburg, at \$5,374,445. This is the largest single award ever made by the Panama commission, and is bonded jointly by the big four.

T H E PROVIDENT

LIFE AND TRUST COMPANY
OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)

Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

THE AUDIT "TWISTING" SCHEME.

The twisting scheme operated by "audit and abstract companies," which was referred to in a recent number of "The Chronicle," and was examined by a special committee of the Baltimore Life Underwriters Association, turns out to have been a very clever thing.

The idea is that the auditors or abstractors are not to place insurance themselves at all, and they are to be paid for their services by a percentage upon what they "save" the insured. That is to say, they examine one's policies, report to him concerning them and also concerning propositions for insurance made to him and accept as compensation for the service a percentage of the apparent "savings" which he makes by receiving and following their service. They suggest that when a man is in the market for insurance he should send to the companies licensed to do business in his State a letter as follows:

Gentlemen: Please send me your \$1,000 sample policy for my age of 49, at your rate nearest to the net rate of \$34.85 with and without dividends, and with yearly cash and paid-up values specified. The policy payable in one sum with optional limited and continuous instalment reservations. I am not ready at this time to receive agents, but assure you that your best written proposition will receive due and unbiased consideration.

Advice Not All Bad.

When all of these proposals are submitted to the auditors or abstractors, they offer not advice but information. The following advice, however, is given, part of which certainly cannot be objected to by agents:

Exclude verbal statements. Send all samples desired in at one time for examination, and same with analysis will be returned to you promptly. Then select your samples and buy according to sample and through the local agents. Pay the full premium from the beginning. Do not be blinded by a rebate. A rebate indicates overcharges in each premium. We cannot select your companies. We put you in a position to deal on an equal footing with agent and company and intelligently select the form of policy adapted to your individual needs without our knowing where you buy. No member or representative of our company has any authority, permit or license to "place your insurance" or to in any way participate in profits from same.

The contract which the insured makes is to pay "10 per cent. of one annual premium, provided, however, that the annual savings shown on the whole insurance account is in excess of the fee charged."

The game appears to be to induce the holders of participating policies, especially if with deferred dividends,

to believe that they can do very much better by transferring to non-participating plans, whereupon the fee becomes payable to the full amount.

Notwithstanding that the new scheme is not particularly handsome, it appears to be a distinct improvement, both theoretically and practically, upon the vicious twisting plans which are still in use and which might conceivably be displaced by it.

CHICAGO'S "UNION" FIGHT.

In connection with the organization of the new Western Insurance Bureau, the "non-union Union," not much has been said about some of its plans. It is understood that it will adopt the union plan of accepting reinsurance only from other members. This would effect a considerable curtailment of reinsurance facilities of the Union companies. They have taken no reinsurance from non-union companies under the rules, but they have placed a large amount with them.

A foolish report has been published naming about half a dozen Des Moines companies that were likely to join the new organization. This was foolish in that it listed the Atlas among the others, and it has been a member of the Western Union for a number of months. Officers of the other companies claimed to know nothing about their intentions of joining the bureau until they read of them.

It appears that there is not a desire among all members of the bureau for a large increase in membership. The opinion seems to be held by some that there is no great advantage in having all companies possible in the organization, while the more companies the more chances of breach of rules and display of bad faith.

The Atlas Insurance Company of Montgomery, Ala., has been incorporated, with capital of \$100,000, to write health and accident insurance.

INSURANCE IN FORCE
FIFTY MILLION DOLLARS

IN NEW ENGLAND

MASSACHUSETTS FIRE AND MARINE INSURANCE COMPANY STARTS BUSINESS.

Last Saturday noon the Massachusetts Fire and Marine Insurance Company, which was organized on February 28 last, received its license to do business in the Bay State, the \$500,000 capital and \$500,000 surplus, making assets totaling \$1,000,000, having been fully paid in, and all other legal requirements complied with. At 12.15 of the same day John C. Paige & Co., the representatives of the company for Metropolitan Boston, had received their supplies and were doing business for the new organization. Other Massachusetts agents appointed by the company are as follows: Thomas Bevington, Lawrence; Frederick E. Warner, Salem; William E. Putney, Fitchburg; Albert G. Brock, Nantucket; George F. Miller, North Adams; William A. Putnam, Leominster; Edward D. Ellis & Son, Bourne; N. G. Norcross, Lowell; Charles E. Stickney & Co., Springfield; Hamlin & Ladd, Haverhill; Prentice & Viall, Reading. The company has applied for admission to all the other New England States; also to New York, New Jersey, Pennsylvania and Delaware. The Massachusetts Fire and Marine enters upon its business career under most favorable auspices. With its ample resources and the experienced guidance of President E. C. Benton and Secretary Walter Adlard, who is also the managing underwriter of the organization, the company bids fair to add another to the institutions which are a credit to the State from which it takes its name.

Boston Mutual Life Bill Enacted.

As forecasted in last week's issue of this journal, the bill empowering the Boston Mutual Life Insurance Company to establish a guarantee capital of \$150,000 went through all the completing stages of legislation and received the signature of Governor Draper, on Wednesday of last week, the last day of the legislative session of 1910.

A Practical Idea.

A practical means of conveying to the public correct and practical knowledge concerning fire insurance is embodied in the pamphlet entitled "How You Can Save Money on Your Insurance," and issued by the insurance committee of the Boston Chamber of Commerce Retail Trade Board. The committee makes acknowledg-

ment to the Boston Board of Fire Underwriters and to Adam Archibald for many of the suggestions embodied in the pamphlet. Mr. Archibald is the author of the valuable treatise on the "Rationale of Fire Insurance Rating," with special reference to Boston conditions, which appeared in "The Chronicle" of April 21 last, and elicited many expressions of approval from its Boston readers. A few pithy dicta extracted from the pamphlet:

Consult your own insurance man before making your repairs.

Ask the man who writes your policies.

Your improved risk is his advantage.

Talk with the fire underwriters.

The man who wrote your policy added some of the following items to the cost of your insurance. Look them over and see if you can't make a saving with a little more care. (This precedes a list of defects easily corrected).

Insurance is mutual. Help yourself and you help the company.

A pine partition varnished is excellent material for a fire.

When building consult the Boston Board of Underwriters, 55 Kilby street.

New partitions of plaster, brick or terra cotta will save you money.

New England Brevities.

The Boston agency of the Lumber Insurance Company of New York will be transferred on July 1 from the office of George McCoy to that of Adam Archibald. The Lumber Insurance Company, on January 1, had assets of \$537,505 and surplus of \$115,624.

About 70 members of the New England Insurance Exchange attended the annual outing at the Pomham Club, down Providence river, last Friday, and, despite the rain, had an excellent time. There was plenty of good music by Reeves' celebrated American band, plenty of good fellowship (as always) and a dandy shore dinner to top off with.

At last Saturday's meeting of the New England Insurance Exchange J. W. Munroe was made chairman of the Lamville County (Vt.) board and J. W. McClure of the Hancock County (Me.) board. A. H. Wilson, of the Farmers, was elected to active and W. F. Hoyt, of the London and Liverpool and Globe, to honorary membership in the exchange.

The annual meeting of the general agents' association of the State Mutual Life took place at the home office in Worcester on the 14th and 15th inst. The agents were welcomed by President Wright, discussed a variety of interesting topics, and enjoyed an

excursion to Boston and Nantucket. C. W. Anderson, of New York, was elected president of the association, and F. A. G. Merrill its secretary for the ensuing year.

The Hartford Life has concluded to abide by the decision of the court that the safety fund shall be distributed among its assessment certificate holders when the total benefits due them shall have been reduced to the amount of the fund—about \$1,250,000—in years to come. This ends protracted litigation on the matter.

The Philadelphia Casualty has appointed Wakefield, Morley & Co., of Hartford, its general agents for Connecticut, Rhode Island, Western Massachusetts and Southern Vermont.

The Standard Fire of Hartford has been admitted to Indiana, and has applied in Wisconsin.

The New England department of the Pennsylvania Fire issues a quaint bookmark of attractive design.

The Independent Surety Company of New York has opened handsome offices on the ground floor of the Trinity Building, 111 Broadway, and will begin writing business in a few days.

WHEN ONE GOES WEST.

Local agents in Iowa last week declared in favor of legislation against discrimination and rebating, along the lines of the Kansas law. No attempt was made to outline any form of law desired. State Auditor Bleakly is understood to be working on a bill and the agents merely urged him to prepare it and have it introduced and suggested the Kansas law as a model.

The Iowa agents are confronted by a hard situation. What they want is the privilege of doing business as it is done in most of the States east of the Mississippi river, where there is some stability of rates. The Blanchard anti-compact law prevents this in Iowa. There is no reason to believe that it would be possible to secure the direct repeal of the Blanchard law. Public sentiment in Iowa is too strong on this point. The only alternative, then, appears to be some sort of legislation to prevent discrimination in rates. Well-informed agents do not believe that the legislature will agree to this, unless the State is given some control over the rates. The attitude of the leading companies toward the Kansas law and the recent declaration of the national board against State supervision of rates preclude the probability of any great assistance from the companies in securing the enactment of a law which savors of State supervision.

Under the circumstances the agents believe that an administration measure would have more show of passing than any bill they, as agents, might cause to be introduced, and they are willing to leave the matter to Mr. Bleakly, whose year and a half as head of the insurance department has given him a high reputation for fairness to all parties in interest.

Iowa a Profitable State.

The majority of the companies can afford to be lukewarm in Iowa better than in many other States where conditions are bad. In spite of rate demoralization most of them make money in Iowa. With the agents, however, the situation is different. Those whose agencies ought to be valuable are constantly obliged to meet competition which is not based upon merit or service, but purely on cut rates. With them it is a constant struggle for existence. They, rather than the leading companies, want relief. Some of the Iowa companies, whose main volume of business is exposed to cut-rate competition, appear to sympathize with the agents and to be more willing than are companies doing business in many States to ad-

mit the principle of State supervision as the price for more stable conditions at home.

GOOSEY.

This week and next are well filled with field meetings in the West. This week the Illinois State Board met at Lake Delevan, Wis., and the Minnesota and North Dakota Fire Underwriters met at Lake Osakis, Minn. Next week the Illinois Field Club will meet at Lake Delevan; the Wisconsin Field Men's Club, the Wisconsin State Fire Prevention Association and the Blue Goose will meet at Green Lake, Wis., and the Nebraska State Fire Prevention Association and Nebraska pond of the Blue Goose will meet at Omaha.

The Monongahela Fire Insurance Company of Pittsburgh, has been admitted to the co-operating list of the National Association of Local Fire Insurance Agents, in accordance with the vote of the executive committee. The managers of the Monongahela, Whilden & Hancock, have furnished the association satisfactory assurances that it will in every particular support the principles of the association.

W. E. Metzger, of Nashville, Tenn., chairman of the executive committee of the National Association of Local Fire Insurance Agents, has made an assignment for the benefit of his creditors. The Franklin, Phoenix of London and St. Paul are the largest creditors.

E. B. Anderson has resigned as manager of the plate glass department of the Casualty Company of America to follow General Manager Muller, his former confrere, to the land of Ponce de Leon, as manager of agents, Peninsula Casualty Company, Jacksonville, Fla. The development progressing in Florida at the present hour is simply amazing. The seed sown by Plant and Flagler is bearing an abundant harvest and is drawing heavily on the nation's supply of brain and talent.

GEORGE T. DEXTER

2nd Vice-President

34 Nassau Street

New York, N. Y.

COMMISSION TO STUDY MUTUAL INSURANCE.

The executive committee of the National Association of Manufacturers in a consultation held at its offices, No. 170 Broadway, New York, decided, on the 21st inst., to send Ferdinand Schwedtmann, chairman of the committee on industrial indemnity insurance, and James A. Emery, general counsel of the National Council for Industrial Defense, to Europe, to visit the most important manufacturing centres in Germany, Austria, France, England, Switzerland, Italy and Norway, and to study the problem of industrial accidents and compensation for the same, from the following four aspects, viz.: humanitarian, legal, economic and indemnity insurance.

Arrangements will be made to meet and consult with experts in all the countries which are visited. The intention is to obtain for the members of the association accurate information as a basis for voluntary accident indemnity insurance, contributions to be made by both employers and employees.

THE NEW "EASTERN UNION."

The "Jury of 15," which came out of the "safety convention" of two or three weeks ago on the subject of the "State of the Union"—Eastern Union," speaking fire-insurancewise—has risen and delivered itself of what seems to be a Scotch verdict. On the face of affairs it seems that everything and everybody is not only anxious and willing, but are willing to actually "conspire" (revised version) to organize once more under some other name than "Eastern Union," retaining only its propaganda.

This "jury" is composed, without exception, of the ablest fire underwriters and administrators on either side of the Atlantic and the evident desire and intent to make the business safe and sane compels attention.

Intelligent co-operation—self-interest—has dominated their deliberations and now it is only necessary to whip the insurgents—or, maybe, one insurgent would be more accurate—into line to make living tolerable for the desirable citizenry of fire insurance companies and eliminate the inevitable vermin that slips into even the best regulated households.

The present result was primarily due to the question of excessive expenses raised by the National Convention of State Insurance Commissioners a year ago. Its effect will extend far beyond that boundary. Governor Hughes' determined atti-

tude, in assembling the legislature of this State in special session furnishes an indication of the possible fury and endurance of the impending storm hovering over all insurance interests excepting the life companies. The life people have had their baptism of the Sullivan type of statesmanship. They have passed under the rod and now the fire and casualty folks will come in for a chastening unless they have their lamps trimmed and burning, all signals set, and are on the "eternal vigilance" list of libertyites.

There is an urgent need that the advice of these acknowledged and accomplished business leaders be followed for the general welfare of all business interests and the National good. The recent wave of demagoguery which swept the country has subsided and reason is resuming its sway. To this end the Eastern Union by that or any other name has a message to deliver and a mission to perform. For that reason it appeals to sound minds and may repel the buccaneers and freebooters of the "Insurance Main."

The Kentucky Court of Appeals has recently held that a life insurance company may under certain circumstances disregard a note that has been taken for a premium, when the note is not paid, and treat the policy as cancelled. The court draws a distinction between a note taken in payment and one taken as evidence of a debt. The latter, under the Kentucky rule, calls for the sale of the security at public sale.

A new arson device has been unearthed at Paterson, N. J., where a young man has been charged with setting fire to his store. The chemical combination he used is made more inflammable by the application of water, and is regarded by the police as the most dangerous yet discovered.

EVOLUTION.

Efforts looking to the organization of a new liability company in one of the Western cities appear to have been abandoned, or at any rate to be kept well under cover. Some weeks ago a promoter whose business brought him into contact with a number of very strong capitalists found them willing to invest in the stock of a new liability company, with a capital of \$1,000,000, provided they first were satisfied that a competent general manager had been secured. They wanted a big man, who must not only understand the liability business and have had long experience in it, but must also have executive ability to fit him for the presidency of a company such as they proposed.

The promoter went to Chicago to look the field over. He got on the track of two men who seemed to meet all the requirements, but was unable to make any impression on them. Neither of them would consider fastening upon a company (for whose welfare he was responsible) such an expense for salary as would compensate for his services.

AGENTS WANTED
AT UNREPRESENTED POINTS.

Most agents take a vacation during a part of the Summer months. The agents of the Philadelphia Life, having the advantage of a direct contract with the Company, can generally be placed in territory where they may enjoy a vacation and at the same time have the advantage of writing business and making money.

Write Perry to-day for contract.

THE STATE RESPONSIBLE.

A few days ago, in this city, a chauffeur was sentenced to fifteen years for manslaughter. It seemed to be a pure case of "joy riding." The pronouncing judge said that he felt that the State was partly responsible through allowing such incapable drivers to have charge of a car on the public highway. That is true enough regarding chauffeurs anywhere, and experience makes it applicable to aviators as well. Sky pilots should learn, or be taught, that other people's chimneys and everybody's trees in parks are not theirs to do with as they please when they want to anchor. Nobody wants to discourage any sport, least of all aviation, but the subject might well receive attention precisely because the art is young, and it is in youth that manners are most easily formed and best retained.

There are at least three parties to this problem—the aviators, the State representing everybody, and those particular citizens or citizenesses, spectators or otherwise, who may suffer particular damage. Happily the interests of all are the same. The aviators cannot wish to kill spectators, or in fact anybody, since that is neither sport, nor in the interests of sport. The State cannot wish to see taxpayers thus diminish in numbers. And the spectators cannot wish to be killed, whether or not they are accomplices before the fact because of their presenting themselves in a place of danger. Presumably, therefore, nobody would object to the suggestion that aviators should not be allowed to aviate at their own sweet will. The capable among them in particular cannot wish to see their profession overcrowded, and should favor the requirement of a certificate of competency before any one is allowed to fly over people's heads and houses and grounds. If any good is to be done the examinations would have to be pretty stiff. It would be a good plan to have the profession consider the subject seriously before it is taken up for them under pressure of regrettable incidents.

It is readily apparent that these new elements of danger must quickly be brought under the underwriting microscope.

EVOLUTIONARY PROCESSES.

The Baltimore companies which recently have had their charters amended will not be able to write their new lines in Iowa until the laws are amended. In casualty insurance, as in several other lines, Iowa has a collec-

tion of statutory regulations which are grotesque. The original idea in the State seems to have been that it was only safe for one company to write one line of business. Accordingly the various casualty and surety lines were divided into groups and a company could write but one. Thus the Hartford Steam Boiler had a monopoly of the boiler business of the State and the Fidelity and Casualty was a burglary insurance company exclusively in Iowa. These laws have since been changed, so that casualty companies can write all lines, but cannot write bonds, and surety companies cannot write any casualty lines except burglary. Thus one general agent at Des Moines has to represent both the Empire State Surety and the American Fidelity in order to write all lines, when either of them would suffice if the law permitted.

This is the ridiculous handicap imposed upon the insurance companies of America in a field which is freely open to the banking and trust companies, a totally unfair and anomalous situation.

STILL WORKING UNDERGROUND.

Otto L. Van Laningham, whose spectacular career as an insurance company promoter has caused so much pain to companies with whose names he has from time to time been connected, has found a new field for his energies. He has gone into the mausoleum business. He has taken the general agency or managership of a company which manufactures a patent mausoleum and will handle the sales for a large territory. He is calling in his old salesmen from various directions and soon will have them traveling out of Chicago presenting to local capitalists the financial advantages of purchasing local territorial rights for the erection of one of these places of entombment.

LONESOME.

Of the companies writing automobile liability in Minneapolis the American Fidelity alone refused to enter the association recently formed for mutual helpfulness and to prevent rate-cutting. It has its own schedule of rates and is writing risks on big cars at five or six dollars less than the other companies.

The Buffalo Casualty, capital \$100,000, for health and accident lines, is reported as under way.

COME AND PROSPER

Among the 15 largest American companies (excluding industrials) this is our 1909 ranking:

First place in percentage of gain in insurance in force; *third place* in gain over 1908 in amount of paid-for new business.

New business first quarter of 1910 far in excess of first quarter of 1909. Our agents are busy and prosperous—and are not driven by the Home Office.

New York Agency: 1401 Empire Building, 71 Broadway.

Incorporated 1851

Employers Liability.

Comparison of Plans of the U. S. Steel Corporation and International Harvester Company.

The following analysis and comparison of the essential features embodied in the respective plans announced by the United States Steel Corporation and the International Harvester Company for establishing relief funds for employes injured, and families of employes killed in work accidents, is furnished by an able contributor. These plans are significant alike to employers and employes because of the present wide-spread interest in the subject of "Employers Liability," and because of the magnitude of the movements instituted by these companies, recognized as two of the largest representative employers of labor in the country. The points of similarity and difference in the two plans are therefore deserving of study, for doubtless they will be taken as the basis for future progress along these lines.

In the following comparison the systems are referred to respectively as the Steel plan and the Harvester plan.

General Features.

Both plans were voluntarily instituted on May 1, 1910. The benefits are available to all employes of the parent and subsidiary companies.

The object is to insure prompt, definite and adequate compensation for injuries resulting from accidents occurring while engaged in the performance of duty and to provide compensation to the widows, children and relatives, who may be dependent upon any employe.

Under the Steel plan, the entire amount of money required to carry out the provisions will be donated by the company with no contributions whatsoever from the employes. Under the Harvester plan, the company agrees to pay certain death, temporary and total disability compensations irrespective of contributions made by employes, but provision is also made for additional temporary disability benefits to be paid to employes who elect to contribute certain portions of their earnings to the benefit fund.

Drawing the Line.

The Steel plan provides greater

compensation in the case of married men than single men. The Harvester plan makes no such distinction.

Both companies announce that benefits provided will be paid regardless of legal liability on the part of the company, but acceptance of any of the benefits will operate as a release and satisfaction of all claims against the company, and the commencing of any legal action whatsoever against the company by any employe or his estate will act as a bar to the recovery of any benefit to which he may be entitled under the respective plans, the Harvester plan providing, however, that in such event the employe shall be entitled to have refunded to him any contributions he may have paid to the relief fund.

No relief fund will be paid for injuries caused directly or indirectly by intoxication of the employe injured, or his use of any drug, or his taking part in any illegal or immoral acts; nor for injuries received other than in the performance of duties or in voluntarily protecting the company's property or interests.

Relief Benefits.

The provisions of the Steel plan for the payment of temporary disablement relief are as follows:

Single Men—Single men who have been five years or less in the service of the company shall receive 35 per cent. of the daily wages they were receiving at the time of the accident. Single men of more than five years' service shall receive an additional 2 per cent. for each year of service over five years. But in no case shall single men receive more than \$1.50 per day.

Married Men—Married men living with their families who have been in the service of the company five years or less shall receive 50 per cent. of the daily wages they were receiving at the time of the accident. For each additional year of service above five years, 2 per cent. shall be added to the relief. For each child under 16 years, 5 per cent. shall be added to the relief. But in no case shall this relief exceed \$2.00 per day for married men. No relief will be paid for the first ten days of disablement nor for a period longer than 52 weeks.

The provisions of the Harvester plan are as follows:

(a) For each working day, or part thereof, during the continuance of disability:

During the first 30 days of disability, 25 per cent. of the employe's average daily pay, and an equal amount paid out of the fund contributed by the employes, if the injured employe is a contributor to such fund.

After the first 30 days, half-pay during the continuance of disability, but not for more than 104 weeks from the

date of the accident.

These disability benefits shall be payable every two weeks, and in no case shall exceed \$20 a week.

Permanent Disability Benefits.

By the terms of the Steel plan the amount of relief which will be paid to employes who have sustained some permanent disablement will depend upon the extent to which such disablement renders it difficult for them to obtain employment, and the amounts which will be paid in cases not specifically mentioned under "Special Benefits" are left to the discretion of the company, it being the intention that this discretion shall be so exercised in all cases as to afford substantial relief, considering the special circumstances of each case and the character and extent of the injury.

The Harvester insurance provides that an employe who has received disability benefits under the plan for the period of 104 weeks, and who is then totally disabled, shall so long as his total disability continues, be paid an annual pension equal to 8 per cent. of the death benefit which would have been payable had the accident resulted in death. Such pension shall not be less than \$10 per month, and shall be payable monthly.

Special Benefits.

As previously stated, under the Steel system, the amount of relief to be paid for permanent disability is made discretionary with the company but in cases coming under the following specific schedule the benefits will correspond as far as possible with the amounts stated below:

(a) For the loss of a hand, 12 months' wages.

(b) For the loss of an arm, 18 months' wages.

(c) For the loss of a foot, 9 months' wages.

(d) For the loss of a leg, 12 months' wages.

(e) For the loss of one eye, six months' wages.

The Steel corporation agrees to provide treatment by surgeons and hospitals of its selection and to furnish artificial limbs and trusses in cases where these are needed.

The Harvester plan provides the following specific special benefits:

(a) Loss of a hand or foot, one and one-half years' average wages, but in no event less than \$500 nor more than \$2,000.

(b) Loss of both hands or both feet,

or one hand and one foot, four years' average wages, but not less than \$2,000.

(c) Loss of one eye, three-fourths of the average yearly wages.

(d) Loss of both eyes, four years' average wages, but not less than \$2,000.

No bills for medical or surgical treatment will be paid by this company unless the medical examiner finds it necessary to provide additional or different medical or surgical treatment, or to remove the patient to a hospital in order to aid prompt recovery.

The Harvester plan provides further:

An employee receiving special benefits shall not be entitled to any other benefits except as specially provided.

If an employee entitled to special benefits dies before the payment thereof, no special benefits shall be paid, but his dependent relatives shall be entitled to death benefits as provided. If an employee who has received special benefits dies as the result of the injury within twelve months of the date thereof, then death benefits shall be paid, but there shall be deducted from such death benefits all sums theretofore paid as special benefits.

No special benefits shall be paid on the basis of annual wages exceeding \$2,000; nor unless the loss of foot, hand or eye shall occur within twelve months after the date of the injury and shall be the direct result of the injury, nor unless written claim therefor be made within 30 days after the loss of the hand, foot or eye.

In case of serious injury, where the employee desires to accept a lump sum in lieu of weekly disability benefits and pension, final settlement will be made on terms agreed upon in writing.

The Steel Plan.

To families of employees killed in accidents in the performance of duty, the Steel corporation will pay the following death relief:

In the case of married men living with their families, who have been in the service of the company five years or less and leave widows, or children under 16 years of age, the company will pay relief to an amount equal to 18 months' wages of the deceased employee. For each additional year of service above five years, 3 per cent. will be added to this relief. For each child under 16 years, 10 per cent. will be added. But in no case will the death relief exceed \$3,000. In the case of single men, the company will pay reasonable funeral expenses, not to exceed \$100.

The Harvester Plan.

The amount of relief provided for death resulting from accidental injury, according to the Harvester plan, is as follows:

If the employee leaves a widow, child or children, or other relatives, dependent upon his earnings for their

support, benefits shall be paid as follows:

(a) If death results from such accident before the expiration of 16 weeks from the date thereof, three years' average wages (but not less than \$1,500 nor more than \$4,000).

(b) If death results from such accident between the end of the sixteenth week and the end of the fifty-second week after the date thereof, two years' average wages (but not more than \$3,000), less all disability benefits paid.

If the employee leaves no widow, children or other relatives, dependent upon him for their support, then reasonable hospital and medical expenses, and a further sum for burial expenses not less than \$75 nor more than \$100.

All death benefits shall be paid to the administrator or executor of the deceased employee, in trust for his widow, children or relatives who were dependent.

No death benefits shall be paid if death result more than 52 weeks after the date of the accident, nor unless a written claim thereof be filed within three months after the employee's death.

If the person entitled to receive death benefits so desires, the company will pay the amount of death benefits in monthly instalments of not less than \$20 each and allow 4 per cent. interest upon all unpaid balances.

Details.

The relief expenditures for employees of the Steel corporation are under the sole charge of a "manager" appointed for each of the subsidiary companies who has full authority and discretionary power with respect to cases arising in the operation of his own company.

The industrial accident department of the Harvester company will be managed by a board composed of five members appointed by the associated companies, but the board may arrange to have the benefits paid and the necessary medical examinations made

(Continued on Page 15.)

After a conference with the officers of the National Association of Local Fire Insurance Agents, President Bishop of the Chicago board appointed a general committee to have charge of the arrangements for the fifteenth annual convention of the association in Chicago on September 12-14. The new La Salle Hotel is to be the headquarters.

Robert B. Armstrong, formerly president of the Casualty Company of America, Philadelphia Casualty and Consolidated Casualty, has returned to journalism in the capacity of financial editor of the "Commercial Journal," Hearst's new Chicago daily.

NO MACHINE AGENTS.

Commissioner Beedle, of Wisconsin, holds that there is already too much uncertainty about casualty insurance contracts and that they require to be standardized, whatever that may mean. For that reason he forbids use of the automatic vending machines in railway stations, hotels and public places. Poor, innocent, helpless silent salesman!

The Dixie Fire, of Greensboro, has decided to subscribe for \$100,000 of the new North Carolina bond issue.

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the CONNECTICUT MUTUAL.

LIVING FORWARD.

By Prof. Irving Fisher, of Yale.

To the Editor of "The Chronicle":

Buying newspaper space appears to be the latest method of opposing a popular movement. Within a few weeks three enormous advertisements, by a so-called "League for Medical Freedom," have appeared in newspapers throughout the country urging people to write their congressmen in protest against the Owen bill for a National Department of Health. Much to the amusement of congressmen these advertisements have resulted in numerous telegrams, based on the absurd idea that the Owen bill aims to regulate the practice of medicine.

When the League for Medical Freedom suddenly appeared on the horizon our movement had encountered substantially no opposition except among quacks and quack medicine proprietors. On the other hand, our movement has the support of the President, of both political parties, as expressed in their platforms; of scientific, philanthropic, medical and labor organizations and the granges, as well as of the life insurance companies; of Dr. H. W. Wiley, of the Bureau of Chemistry, and of General Walter Wyman, of the Public Health and Marine Hospital Service. The general public will find it hard to believe that these indorsements, especially the hearty indorsement of the life insurance companies, can be in the interest of a "medical trust."

For further information I would refer your readers to Bulletin 41 of the Committee of One Hundred, about to be issued (address Drawer 45, New Haven), to the Senate reports (Nos. 1 and 2) on hearings on S. 6049 (address Senate document room), to House reports of hearings on health bills June 2 to 6 (address document room, House of Representatives), to Senator Owen's speeches (address Senator Owen) and to my report on "National Vitality" (Senate document 419).

As president of the Committee of One Hundred on National Health, I wish to emphasize the following facts:

First—As the inclosed bulletin of the Committee of One Hundred indicates, the real strength of the opposition (to a national department of health) evidently comes from commercial interests, such as the quack medicine interests and others who have reason to fear the pure food and drugs act. While Christian Scientists and other "drugless" cults are denouncing drug doctors and denouncing a "medical trust" which does not exist, these cults are themselves play-

ing into the hands of a drug trust which does exist.

Second—Under our Constitution the Federal Government could not, if it would, regulate the practice of medicine.

Third—The Owen bill contains no provision aiming to regulate the practice of medicine.

Fourth—Section 8 in the Owen bill, the section authorizing the establishment of "chemical, biological and other standards," has been eliminated entirely from the bill, although only a heated imagination could have construed this section as attempting to regulate the practice of medicine.

Fifth—Senator Owen did not prepare his bill at the instance either of the American Medical Association or of the Committee of One Hundred on National Health. It is true, however, that the American Medical Association and the Committee of One Hundred heartily indorse the bill in preference to any of the other numerous health bills now before Congress.

Sixth—The committee of One Hundred on National Health is not a medical organization. It did not originate with the American Medical Association, but with the American Association for the Advancement of Science. It is allied with the American Medical Association only in the same sense that it is allied with labor organizations, farmer organizations, life insurance companies and various other agencies which are working to improve public health.

Seventh—While opposed to fraudulent quackery, which is always imposing "fake" medicines and cure-alls on the public, the Committee of One Hundred on National Health is not devoted to any particular school of medicine to the exclusion of others. Curiously enough, it was a Christian Scientist who moved the appointment of the Committee of One Hundred. I may add that in my report on "National Vitality" to President Roosevelt I put myself on record as favoring "medical freedom." I can indorse almost all of the position on that subject taken by Mr. Flower.

Eighth—A department of health in America, like the department of health in Germany or anywhere else, will have better things to do than regulate the practice of medicine. It will regulate the misbranding of foods and drugs (there's the rub!), the pollution of streams, the inspection of meats and quarantine, and will obtain and distribute information in regard to health of human beings, just as the Department of Agriculture does in regard to the health of hogs and cattle.

The new agents' manual just issued by the American Bonding Company of Baltimore, is on the loose-leaf plan and bound in blue cloth. To facilitate finding rates in it each class of business is designated by pages of a different color; fidelity, canary; judicial, green; contracts, russet; depository and miscellaneous, blue; licenses and notary public, corn; Federal, gray; public officials and short rates, melon, and index, white.

H. R. Willcox, manager for the Mutual Life of New York in North Carolina, has resigned to take effect July 1. Mr. Willcox, whose agency is distinguished by having produced more paid for business in North Carolina in one year than any other in the history of the State, will have charge of North Carolina for the National Life Insurance Company U. S. A.

The growing decrease in coal mine accidents shows that the use of safety devices should be made compulsory.

CHARLES M. TURNER,
General Manager,
Marquette Building, CHICAGO, ILL.

A SINGULAR CASE.

On Monday last a Coroner's Jury in this city decided that the inhaling of "irritant fumes" had caused the death of Charles C. Dickinson, former president of the Carnegie Trust Company, who died on May 24, eight days after he was taken from the laboratory of Dr. Lange, an alchemist, of Scranton, Pa.

This verdict was delivered under instruction of Coroners Feinberg and Winterbottom, and was a direct reversal of the sworn report of the physician who performed the autopsy. He said he had failed to find any trace of carbon. It came out at the inquest that after the body had been taken to Kensico Cemetery and made ready for interment, Dr. Schultze, the coroner's physician referred to, appeared on a special commission from the Casualty Company of America, in which Mr. Dickinson carried a \$65,000 accident insurance policy, and performed another autopsy, he having already made one report as coroner's physician. Dr. Schultze said that he had found the tissues between the muscles of the heart defective and that the lungs were unusually small.

Stanton Dickinson, brother of the dead man, testified that he and some other men were in the laboratory the day Dr. Lange was fusing a metal composition with hydrochloric and nitric acids, and that when the fumes arose all those present became nauseated except one man.

Mr. Dickinson, the witness said, hurried to New York, stopping at Wilkesbarre to see a doctor. When he arrived here his family physician sent him to a hospital.

In his charge to the jury Coroner Feinberg said that he and Coroner Winterbottom were convinced that the inhalation of the gas fumes had caused Mr. Dickinson's death.

There is a singularly startling feature about this case, as recited in the daily press. Last week "The Chronicle" gave out the official statement of President DeLeon, of the Casualty, to the effect that an official examination had established beyond question that the death was not due to accidental causes. Sixty-five thousand dollars is a tempting plum. It is tempting both to those who have and haven't and even more so to those who merely serve by standing and waiting in the hope of a dropping.

The National Life U. S. A. reports that their examined business for the month of June to date is far ahead of the business reported for any month for more than two years.

THE SOUTHWESTERN SURETY COMPANY.

The Southwestern Surety of Durant, Okla., has made the required deposit of \$50,000 with Louisiana and has been admitted to do business in that State. This breaks in upon the five surety companies which have controlled the New Orleans situation. Whether it will have an effect upon rates remains to be seen. The new company is said to be independent. The five companies in the field raised rates about a year ago and caused talk of a combination in violation of the anti-trust laws being in existence.

Nelson D. Sterling has resigned his position with the Aetna Indemnity to become secretary of the Burglary Insurance Underwriters Association of America, July 15. E. C. Keating, for fourteen years with the Fidelity and Casualty's burglary department, was also selected as statistician of the association. These two elections highly strengthen the organization and better insure its permanency.

The purchase of the Ocean by the Commercial Union—both of London—mentioned in last week's "Chronicle," has been confirmed. The United States branch office is not to be disturbed. Sir Thomas Hewitt, chairman of the board of directors of the Ocean, is quoted as saying that the companies had made an excellent bargain.

Hon. J. L. Bleakley was renominated at the Republican primaries in Iowa last week, assuring no change in the office of insurance commissioner.

PENNSYLVANIA'S SURETIES ORGANIZING.

Pittsburg.

The Surety Underwriters Association of Pittsburg has been organized by representatives of surety companies doing business in Pittsburg. A constitution and by-laws have been adopted and the following officers elected: President, R. H. Cotton, U. S. Fidelity and Guaranty; vice-president, L. V. P. Shriver, Fidelity and Deposit; secretary, Edward Ball, Title Guaranty; treasurer, F. M. Hayes, American Surety. Executive committee: R. H. Cotton, F. M. Hayes, James W. Sweet, National Surety; E. R. Roberts, Title Guaranty, and L. Hays Gott, United Surety. The feature of the association's platform is prohibition of rate cutting and limitation of commissions to 15 per cent., to be paid only to licensed brokers.

Harrisburg.

The Surety Underwriters Association of Harrisburg has been formed with the following officers: President, G. L. Culmerly; vice-president, Howard M. Bird; secretary, C. V. Retter; treasurer, William B. Miller. Executive committee: G. L. Culmerly, H. H. Bretz, R. G. Cox, H. D. Chester and William Essick.

The Norris bill, recently enacted into law by the Ohio Legislature, is said to have increased the liability of employers in the State at least 50 per cent. The Travelers has notified its Ohio State agents to suspend all present manual rates pending the receipt of new tariffs, while other companies have ordered an advance of 50 per cent. over former rates.

In celebration of the seventieth anniversary of the birth of President Seward, which occurs November 8 next, the agents of that company are busily at work in an effort to increase the premium income for the year by \$700,000. It is learned that thus far the ratio of increase for that purpose has been sustained.

The multiplicity of local agents in the smaller towns of the West is shown by New London, Ia., with 1,000 population and twelve local agents, including every banker and barber, the local minister and the manager of the grain elevator.

A \$1,000,000 fire insurance company is being organized in Kansas City, Mo., to be called the Central Union Fire Insurance Company. Surplus will be half a million.

MAIL GUARANTEE.

A recommendation was made to Congress by Postmaster General Hitchcock on Tuesday that a law be enacted to indemnify the senders or owners of third and fourth class domestic registered matter lost in the mails.

The Postmaster General urges that no growth of third and fourth class registered mail can be expected unless indemnity for possible loss can be granted. Refusal to grant such indemnity, he maintains, is an unfavorable discrimination against domestic mail, as an indemnity is provided for the loss of registered packages in foreign mails.

This form of insurance is now written by the Lloyds and foreign marine companies. The Home Fire has also made some motion in that direction and one or two of the surety companies have made a stagger that way without any considerable results. It is an interesting field and whether or not Uncle Sam offers indemnity the big mail order houses and department stores will no doubt continue to use the insurance companies for the very simple reason that there is less red-tape just as an express money order is away ahead of Uncle Sam's so far as convenience is concerned.

EMPLOYERS LIABILITY.

(Continued from Page 11.)

through the organization of the Employees Benefit Association. Should this be done, the association will be reimbursed for all expenses of this department, the intention being that the associated companies will pay all operating expenses, no part of the contributions from any employe to be used for this purpose.

Under the Harvester plan, the deductions to cover the employes contributions for benefits during the first 30 days of disability, as described under "Temporary Relief Benefits," will be made from the employes wages on regular pay-days on the following basis: Employes earning \$50 or less per month, 6 cents per month; earning more than \$50 and less than \$100 per month, 8 cents per month; earning more than \$100 per month, 10 cents per month. It is estimated that these contributions, together with the one-fourth wages paid by the company will be sufficient to provide half-pay for all injured employes during the first 30 days of disability. If experience shows that the employes' contributions are more than sufficient for this purpose, then the employes' contributions will be reduced accordingly. The object of inviting employes to join in contributing to a fund for the

payment of benefits for the first 30 days of disability is to secure their interest and co-operation in the prevention of accidents by making each employe financially interested in guarding against accidents and in seeing that his fellow workmen are equally careful.

The Harvester announcement provides that the "average yearly wages," as used with reference to special and death benefits, shall be computed as follows:

The employers' average daily wages during the year of his employment preceding the date of the accident shall be multiplied by the number of working days in that year. If the injured employe has not been employed for a whole year, then the average yearly wages shall be computed by multiplying such employes' average daily wages, during the time he has been employed, by the number of working days in the year preceding the date of the accident.

The Maryland Casualty has canceled its burglary policies on open stocks in Oklahoma City because of the poor police service. There have been a number of burglaries recently, but the police don't seem to be able to catch even a bad cold. It is expected all the other companies will follow suit.

Recent slight earthquake shocks in Salt Lake City and vicinity have been responsible for closer inspection of fire insurance policies to detect possible lurking clauses. Some agents report an inquiry for policies protecting against earthquake damage.

Robert W. Snyder, well known in Kentucky insurance circles, has been appointed special agent in Kentucky and Tennessee for the Hanover, to succeed Frank M. Drake, resigned.

The North Carolina Underwriters Association held its thirteenth annual meeting last week at Greensboro.

THE GLOBE SURETY ELECTS OFFICERS.

At a meeting of the directors of the Globe Surety Company of Kansas City, Mo., held Saturday, June 18, the following officers were elected:

President—Thomas M. Walker, president of the Atchison Savings Bank, Atchison, Kan., and vice-president of the McPike Drug Company, Kansas City, Mo.

Vice-Presidents—James Van Buren, of Kansas City, Mo.; John R. Mulvane, president of the Bank of Topeka, Kansas, and J. Z. Miller, Jr., cashier Belton National Bank, Belton, Texas.

Treasurer—William T. Kemper, president of Commerce Trust Company.

Assistant Secretary—H. P. Fones, now of the surety department of the Commerce Trust Company.

A secretary will be selected later.

Mr. Van Buren will be the active manager of the business, and it is expected that the Globe Surety Company will commence to do business on or about July 1. The surety and fidelity departments will be the principal features for the present, but casualty lines will be added later.

Local agents in Oklahoma City are asking for lines on the builders' risk of the Nelson Morris packing plant now being erected, and which when completed will carry a schedule in excess of \$3,000,000.

The New York Board of Fire Underwriters has selected Allen E. Clough, adjuster for the London Assurance, to succeed Willis O. Robb as manager of the loss and adjustment bureau.

INSURANCE COMPANY

ESTABLISHED 1836. ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS	\$13,885,802.88
LIABILITIES	8,766,622.58
SURPLUS	\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income.	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of..... \$2,710,650
And increase of assets in the same time of..... 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the Company's business, convinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

Curtate Summations of D Column.

Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:

Divide temporary insurance values by immediate temporary annuities.

Computing Annual Endowment Insurance Premiums:

Divide endowment insurance values by immediate temporary annuities.

Computing Annual Pure Endowment Premiums:

Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.

By these means, the net extra premium for a special guaranty can be quickly and accurately computed.

Computing Annual Semi or Double Endowment Premiums:

Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.

Computing Limited Premiums:

Divide the proper single premiums by immediate temporary annuity.

Computing Surrender Values:

Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.

Extended Insurance with Fractional Paid-up Endowment:

Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.

Computing Terminal Reserves:

Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.

Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.

Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.

Warranted Commissions for New Business.

Surrender Values.

Dividends.

For these purposes the "select and ultimate" will be most useful.

COLD JUSTICE FULLY EXONERATES HEGEMAN

The New York Law Journal in Blunt Language Tells the Story of the Miscarriage of
Official Persecution.

SUPREME COURT—TRIAL TERM—PART I.

MR. JUSTICE VERNON M. DAVIS

People, &c., v. John R. Hegeman.—This is a motion to dismiss two indictments for perjury against the defendant. Originally there were three indictments referring to similar transactions. One of these indictments was dismissed by consent of the district attorney, and upon a record made under a writ of habeas corpus the questions of law involved were passed upon in succession by the Special Term, the Appellate Division and the Court of Appeals. As a result of these proceedings this latter charge and the evidence to sustain it were resubmitted to the Grand Jury in the fall of 1909. The Grand Jury refused to indict. The remaining two indictments are now before the court on this motion to dismiss. The district attorney, after a careful review of the evidence available for the support of the accusation, in a written memorandum submitted on the motion, expresses the opinion that no jury would convict on the evidence, and if conviction should follow, the judgment would be set aside as against the weight of evidence. He also states that the proof in these two cases is much weaker than that submitted under the charge which was dismissed by the Grand Jury. After an examination of the record as submitted, I have arrived at the same conclusion. Under the circumstances a trial of the indictments, prolonged and expensive as it necessarily would be, and certain to result in ultimate acquittal of the defendant, is not required by any demand of public justice. The motions are granted.—"New York Law Journal."—June 24, 1910.

TEXT OF EQUITABLE DECISION.

The Exact Terms of the Decision of the French Council of State in the Matter of the Equitable and the Republic.

THE following is a translation of the decision, rendered by the Council of State of the French Republic on May 28, 1910, relative to the issues raised in the contest between the Equitable Life Assurance Society and M. Paulet, superintendent of insurance for France, as to whether the French statute, requiring accounting with each individual holder of a deferred dividend policy and the sending of a copy of the account to each

such holder every year, did or did not apply to the policies already in force in the Equitable on the tontine, semi-tontine and free tontine plans, under which it had been agreed that there should be no accounting or distribution prior to the end of the tontine period:

There being no occasion to adjudicate upon the matters of form presented by the petitioning company;

Considering that by the terms of article 7, section 1, of the law of March

17, 1905, when the profits reverting to the assured are not payable immediately after the settlement of accounts of the business year which produced them, and individual account must state each year the portion of these profits apportionable to each of the contracts entered into or performed in France and in Algeria and be addressed to the assured;

Considering that by his letter of December 14, 1908, the Minister of Labor put the Equitable Life Assurance Company under the necessity of addressing the above mentioned indi-

vidual account to the assured whose policies had been issued before the law went into effect;

Considering that though the petitioning company acknowledged that the provision of article 7, section 1, of the law above cited was opposed to the issuance of new policies permitting a deferred participation in profits such as it had till then practiced, and though it in fact ceased to issue similar policies from the date of its request for registration, it refused to give notice of any individual account to the holders of running policies;

Considering that, to establish the legality of this refusal, the company relies upon the fact that, in its old contracts, it was agreed between it and the deferred dividend policyholders that during all the said period of accumulation, it should preserve the freedom of disposing of the sums forming its surplus or accumulated profits, that it should continue to make them figure in its assets and that it was only at the expiration of that period that it should declare a profit and make an apportionment thereof among those interested; that it affirms, in consequence, that there does not exist in its accounts any statement of profits that would revert annually to the assured whose contracts continue to be governed by the provisions above referred to and that it cannot, for that reason, state them in individual accounts addressed to each of them;

Considering, it is true, that the Minister contends that the making out of individual accounts, which, by the above cited letter, he ordered to be sent to those interested, would constitute a mere measure of control, not conferring upon the assured any new right and not taking from them any of those rights which might belong to them, and that in consequence it would not impair contracts concluded prior to the law of 1905;

But considering that it results from the preparatory studies as well as from the very text of article 7, section 1, of the law above cited that the individual accounts provided for by that article have not the restricted import which the Minister attributes to them; that in virtue of the law the sums which they state and which are no longer capable of any modification are carried to the credit of each assured who will become absolute owner thereof if, at the agreed period, he has still the character of an assured; that, in consequence, these sums must each year figure in the liabilities of the insurance company;

That thus this provision of the law has for its object not merely to enact a measure of control but in addition to impose upon companies a mode of apportionment of profits absolutely different from that which the old contracts entered into by the petitioning company with its assured had in view;

That those agreements, prohibited in the future by the law of March 17, 1905, were not contrary to any law at the time when they were entered into, and that the Government could oppose their performance only if the new law by an express retroactive provision had declared them void;

Considering that article 7, section 1,

in contradistinction to the temporary provisions contained in title 5 of the law, has no retroactive character and that it is applicable to existing contracts only so far as it does not modify the respective stipulations of the parties;

Considering that from the preceding, it follows that in ordering the Equitable Life Assurance Company to address to its old policyholders an annual account of profits, the Minister has made an incorrect application of article 7, section 1, of the law and that the decree which declared the withdrawal of the registration of the company for its failure to comply with that order, is in excess of his powers;

Held: The decree above referred to is annulled.

MEDICO-ACTUARIAL MORTALITY INQUIRY.

The final arrangements for proceeding with the new medico-actuarial mortality investigation, set on foot by the Actuarial Society of America and the Association of Medical Directors, have now been made; and a committee, consisting of Arthur Hunter, actuary of the New York Life Insurance Company, chairman; A. A. Welsh, vice-president of the Phoenix Mutual Life Insurance Company, and Dr. Symonds, medical director of the Mutual Life Insurance Company, has been constituted, to establish a central bureau to receive data and prepare the material. The offices of the bureau are at 346 Broadway, New York.

Invitations to contribute experience have been limited to companies which have representatives in both the Actuarial Society and the Association of Medical Directors. It is said that all of these have accepted and will co-operate.

Among the changes which have been made from the original program is that provision is to be made to test the "Modified Healthy English Table" as a standard for the calculation of expected mortality. This will be done by means of investigation of portions of the data which are unaffected by occupational dangers and are otherwise normal.

There is also to be something of an investigation in regard to the effect of residence in different parts of the country upon mortality among those who are otherwise normal.

Aside from this, the investigation will be strictly in regard to the mortality of classes of risks which have been accepted as sub-standard, that is, have been treated as not entitled to be insured at the usual rates.

There is, however, a special investigation in regard to the mortality by "build," in which underweights and overweights will be compared with the mortality among those who are of normal build.

THE TRAIL OF THE AUDIT.

The June number of the "Life Association News" contains a very full account of the excitement in various neighborhoods caused by the operations of the J. F. Kight Audit and Abstract Company, of Indianapolis. It prints in full the report of the special committee of the Baltimore Life Underwriters Association, to which "The Chronicle" has twice referred, and also the report of the committee of the Cincinnati association received from various attorneys and others who have had to deal with the matter.

It appears that there is one case in Detroit where, after the auditing and abstracting had been made, the policyholder concluded that, should he follow the suggestions, he would be a loser. Notwithstanding this, the audit and abstract company undertook to collect a fee, on the basis that it had shown a way in which a saving might be made.

A similar case has arisen in Cleveland. The policyholder again concluded that, should he follow the advice, he would not make a saving but would be financially a loser.

It appears from all returns that almost the sole activity of the concern is stirring up dissatisfaction with life insurance policies which are already in force and thus giving special encouragement to twisting.

The committee of the Cincinnati association claims to have found the following in one of the abstracts provided by the concern, viz.:

"Endowment insurance is a bad form of contract for any one regardless of age or position in life. Moral—Keep all forms of investments out of your policy contracts and at death both your insurance and investments will belong to your beneficiary or estate."

Good Contracts and Territory for
Good Producers.

ARTHUR E. CHILDS, President.

To Succeed the Eastern Union.

IN THE course of a two hour session in this city yesterday the Fire Underwriters Association, a body designed to succeed the Eastern Union, was formally organized by the election of Henry W. Eaton as president, and J. B. Branch as vice-president, and the selection of an executive committee. A letter from the committee of New York insurance brokers, arguing against the reduction of commissions to brokers in New York City, was referred to the executive committee, and action was deferred until this committee should make a report. The meeting yesterday was called to order by Frank Lock, and was devoted chiefly to a discussion of the work of the association. The plan of organization for the new association follows:

Article I.—Name.

The name of this association shall be "The Fire Underwriters' Association."

Article II.—Object.

Its chief object shall be the reduction of the expense of conducting the fire and tornado insurance business in all territory under its jurisdiction, to the end that the cost to the insuring public may be reduced to the minimum.

Article III.—Territory.

The territory shall comprise the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas and Arkansas, and such other territory as may be taken on by vote of the association, except those States where such an agreement may now or hereafter be contrary to law.

Article IV.—Membership.

The membership of the association shall consist of the executive officers, managers and general agents of association companies authorized to do business in the States under the jurisdiction of the association.

No member shall have power to vote on any subject pertaining solely to a territory over which he has no jurisdiction. On any subject under consideration a single vote only shall be cast for each company represented.

New members can be elected by 80 per cent. vote of the membership.

No member shall be represented at any meeting by a substitute except by unanimous consent of the members present, taken when the proposed substitute is absent from the room.

Article V.—Withdrawal from Membership.

No member shall be permitted to withdraw from the association except upon unanimous consent until three

months after notice of intended withdrawal shall have been given in writing to the secretary, and any member withdrawing without such notice or violating the rules and regulations of the association while such intended withdrawal is pending, shall be deemed to have forfeited his honor, and subject to penalties to be hereafter provided; it being understood that at the end of such three months, and on such withdrawal any other member may withdraw at the same time, provided he shall have given at least five days' notice in writing to the secretary of the association of his intention to do so. Notices shall be sent immediately to all members of all such notices of withdrawal.

Article VI.—Bulletin.

The association shall provide for the publication of a bulletin, as a means of communication between members, the contents of which shall be treated as strictly confidential. All communications appearing in the same shall be answered by each member within forty-eight hours of receipt.

Article VII.—Obligations of Members.

The obligation of each member shall be based upon his personal honor and good faith.

Members of the association shall, as such, represent all companies under their management or control, and shall in their behalf be subject to all association rules, and shall secure formal membership in behalf of all such companies.

Each member shall be responsible for a violation of these obligations by any of his subordinates.

The executive committee may, in its judgment, interrogate any member regarding his observance or non-observance of the rules of the association, and any member so interrogated shall be obligated to reply promptly.

Article VIII.—Officers.

There shall be a president, vice-president, treasurer and secretary, which two latter may be the same person, who shall be elected annually at annual meeting, and who shall hold office until the end of the meeting at which their successors shall have been elected.

Article IX.—Committees.

Standing committees as follows shall be appointed by the president, and shall be constituted so as to give opportunity for all interests to be equitably represented, the chairmanship of such committee to be elective by the committee themselves.

There shall be an executive committee of fifteen members, the membership of which shall be divided among companies having large and small incomes, both American and foreign, which in its formation shall represent all classes of membership in the association. The president shall in making appointments to the executive committee see that the various portions of the field under the jurisdiction shall be fairly represented. Such

committee shall at its first meeting be divided by lot into three classes, each consisting of five members, so that the term of office for the first class shall expire at the end of the first year; for the second class at the end of the second year; and for the third class at the end of the third year. No member shall be eligible for reappointment until one year after the expiration of his term of service. After first year members to be appointed for three years.

The executive committee shall exercise the full powers of the association as expressed in its constitution and by-laws during the intervals between association meetings. It may employ such salaried force and rent such quarters as may be necessary for the proper carrying out of the purposes of the association.

There shall be a bulletin committee, consisting of three members which shall have entire charge of the bulletin, with power to reject any communication which shall be deemed injurious to the welfare of the association.

Article X.—Meetings.

Regular meetings of the association shall be held quarterly at such places as may be appointed by the executive committee. Special meetings may be called by the executive committee on its own motion or by the president on

receiving a request for same signed by five members.

Article XI.—By-Laws and Rules.

The association shall have the power to make such by-laws and rules or amendments to the constitution as may be necessary for its welfare. All such may be enacted or amended by an affirmative vote of 80 per cent. of membership. Members not present at the meeting may vote by mail within two weeks after a meeting at which a by-law or rule or amendment is voted on.

By-Laws.

Section I.—Remuneration and Allowances to Agents and Brokers.

(a) In the following territories the brokerage on fire and tornado risks shall be limited to not exceeding 10 and 15 per cent. on classes hereafter enumerated:

New York Fire Insurance Exchange.

Boston Board of Fire Underwriters, inclusive of their Metropolitan district.

Philadelphia Fire Underwriters Association.

Delaware County, Pa.

Allegheny County Board of Fire Underwriters.

Association of Fire Underwriters of Baltimore City.

Fire Insurance Society of Newark, N. J.

In the territory of the Suburban Fire Insurance Exchange of New York, brokerage of 10 per cent. only may be paid.

In all of the above territory an overriding commission to policy writing agents shall be allowed of not exceeding 10 per cent. (save exceptions noted below), together with an allowance of not exceeding 1 per cent., which shall cover all agency expenses, such as postage, exchange, advertising, maps and map corrections, and all other charges excepting local board expenses.

On dwellings and their contents, private barns and their contents, occupied exclusively as such, 15 per cent. brokerage may be allowed. On all other classes 10 per cent. brokerage may be allowed.

(b) On all classes of risks located in territory not before mentioned a commission to agents shall be allowed of not exceeding 15 per cent., with an allowance of not exceeding 1 per cent., which shall cover all agency expenses, such as postage, exchange, advertising, maps and map corrections, and all other charges excepting local board expenses.

(c) The commission and brokerage rules of this association shall not apply in the non-expected or ordinary portion of the territory under the jurisdiction of the association until the association has perfected and made mandatory rules reducing commissions and brokerages, in accordance with the terms of this agreement, in the excepted portion or portions of the territory.

(d) No member shall allow, either as brokerage or commission, except to duly commissioned agents authorized to bind risks, over 10 per cent. on any policies written at the head office of his company or at any branch or agency office, covering property located in 15 per cent. territory.

(e) The appointment as agent of

any official or representative of any church, school, college or public institution, for the purpose of receiving commissions for policies issued thereon is prohibited.

Section II.—Salaried Agents.

(a) One salaried agent may be employed by a company or by companies jointly which are under the same ownership or control in any city having a population of at least 100,000 as per latest census. Such agent shall be under the same restrictions as to brokerage as are imposed upon other agents. Such salaried agents shall not represent any other company. This clause does not relate to companies maintaining now or hereafter in such cities branches at which the entire cost is borne by such companies, and where all remuneration shall accrue to the company maintaining the branch office.

The names of all salaried agents shall be filed with the secretary, together with a statement of the territory covered by them. Such appointments shall be revoked by any member should the executive committee upon investigation decide that they controvert the spirit or letter of these rules.

(b) The appointment of an agent as a salaried representative who at the time of his appointment represents or has within six months represented as agent such other member or members of this association, is forbidden.

(c) Officers or salaried employees at the head offices of companies members hereof may act as agents of other companies also members hereof, at the rates of commission permitted by the rules of this association.

Section III.—General Agents.

(a) General agents under the meaning of this rule are defined as those who receive and pass upon daily reports of agents in the territory under their jurisdiction and have in other respects entire supervision of such such agents.

It is understood that the intent of these rules is to prevent the appointment or maintenance of general agencies for the purpose of influencing the business of a local agency by the payment of excess commissions.

(b) All members having general agencies within the territory covered by this association—whether the same were established prior to the formation of this organization or subsequent thereto—shall be required to file within 60 days with the secretary ((to be published in the bulletin), the names of such general agents and a statement showing where their head office is located and the territory over which their jurisdiction respectively extends. Any such appointment hereafter made shall be reported and published in the bulletin in like manner.

(c) If upon investigation the executive committee shall be satisfied that any such appointments have been made or are in effect contrary to the spirit and intent of the rules of this association, such appointment or appointments shall at their request be revoked, provided, however, that any member required to revoke any appointment may appeal to the association against the decision of the executive committee at any general meet-

ing and the decision then reached shall be final.

(d) No general agent representing a member of this association shall also represent as general or special agent a company not a member of this association in the territory of this association.

Section IV.—Special Agents.

(a) No member shall be represented by a special agent who also acts as special agent for a company not member of this association.

Section V.—Observance of Tariff Rates.

(a) Members are obliged to observe all tariffs of rates recognized by this association where not prohibited by law.

(b) Members of this association shall not recognize or support tariff organizations other than local boards which do not adopt the brokerage and commission rules of this association.

(c) Members of this association shall not recognize or support local boards, including those in the large cities mentioned in section I., which do not adopt the brokerage rules of this association.

Section VI.—Duties of Officers.

(a) The president shall preside over all meetings of the association, and shall appoint all standing committees of which he shall be a member ex-officio.

(b) The vice president shall preside over all meetings and have the same powers as the president, in his absence.

(c) The secretary shall keep record

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.

Large surrender values.

Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in installments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

For further information apply to
JOHN H. ROBINSON, General Agent
FRANK ALLEN, Associate General Agent
For New York and New Jersey,
Postal Building,
253 Broadway, - - - NEW YORK.

of the proceedings of all meetings of the association, and when practicable, of the proceedings of meetings of all standing committees; maintain suitable offices and office records; publish bulletin subject to the direction of the bulletin committee, and perform such other duties as the office may entail, subject to the control of the executive committee.

(d) The treasurer shall receive all funds, maintain suitable records and properly care for all funds of the association, it being necessary to have the approval of two officers of the association on each voucher. (The signature of any two officers, including the chairman of the executive committee, will be sufficient.) Statement of all transactions showing balance on hand and how held shall be made to the association at each annual meeting, or oftener if called for by the executive committee. Such statement to be first audited by a committee appointed for that purpose.

Section VII.—Reinsurance.

(a) There shall be a system of inter-reinsurance between members operated through a central office in charge of the secretary, who shall have power to bind members within duly authorized limits upon risks offered by members.

(b) The privilege of the inter-reinsurance who desire to participate in its membership, and who shall have signed the agreement controlling its operation.

(c) No member shall accept reinsurance from a non-association company on any risk located in the territory of the association.

(d) No member by policy, contract, or otherwise, shall give reinsurance to a non-association company on any risk or risks located in association territory, until such reinsurances have been offered to members through the reinsurance bureau, hereinbefore provided.

(e) This rule does not apply to head office reinsurance contracts made with reinsurance companies who do not transact a direct policywriting business.

The foregoing sections do not apply to steam railroad business.

Section VIII.—Membership in Bureaus.

(a) Every member of this association shall be eligible, on application, to membership in any organization made up of members of this association, for the control of any particular class of business or for inspection purposes. None of the members of this association shall in the future form or be connected with any organization of agreement for the control, solicitation, inspection, or exploitation of any class of business which is not open to all members.

(b) Membership in all such organizations shall be confined to members of this association.

This rule shall not apply to the National Board of Fire Underwriters.

Section IX.—Deviations and Penalties

The executive committee shall have power to examine the books of any company alleged to have deviated, and also to examine under oath the officers of such company. The committee shall, when necessary, or desirable,

employ a professional accountant or auditor, who shall have power to examine the books of any company alleged to have deviated. The refusal of any such officer or member to testify to any question pertinent to the complaint or his refusal to submit to the examination ordered by the executive committee shall be deemed an admission of the truth of the charge under investigation.

The executive committee shall impose a penalty or fine of not less than \$100 and not exceeding \$1,000 for any one violation of the rule. Penalties shall be paid within thirty days from the date of the notification of finding and before an appeal may be made.

Appeals from the decision of the committee may be made at any meeting regularly called, notice of such appeal having been previously given to each member of the association, and the finding shall be confirmed unless 80 per cent. of the members present shall vote otherwise. If an appeal be successful the fine to be remitted.

(a) Charges Against a Fellow Member.—In case any member shall report the dereliction of any other member coming to his knowledge, it shall be optional with him to make a charge in writing, over his own signature, to the executive committee, or he may, in preferring charges, first submit the actual or supposed facts to two or more members, who shall, if they are thought by them to be sufficiently reasonable and clearly warranted, unite with him in making the charges, which must be in writing; the members so uniting in the charges may report to any other member of the executive committee or to the secretary, who shall not in any way, directly or indirectly, indicate the names or identity of such members. Said executive committee shall thereupon investigate the charges.

Pledge of Member.—I hereby agree for myself and all companies which I represent that I will observe the foregoing agreement and all the rules and regulations of the Fire Underwriters Association, in letter and in spirit, until I am released from its obligations, as therein provided. I will immediately modify when so notified to do, any agreement, contract, or understanding with agents, brokers, or others, not in accordance with its provisions, nor will I make any contrary to such while I am a member of this association.

The undersigned companies assent

to the foregoing and express their willingness to co-operate in enforcing the same, provided that in advance of the agreement being put into operation a general meeting be called of all the signers before final commitment is made by the subscribing companies.

It being understood that at such general meeting the representative of any company assenting thereto shall be at liberty to withdraw his assent if dissatisfied with the number of those assenting or on account of the abstention of those whose co-operation is deemed essential to the effective enforcement of the agreement.

RATES IN GERMAN TOWNS.

There has arisen in Illinois an interesting question in rating which is giving fire underwriters something to think about and in some instances to wrinkle their brows over. Down near East St. Louis there are several towns populated mostly by Germans. Most of the inhabitants own their own homes, and private premises as well as the streets are kept very clean. Naturally the loss record of these towns has been excellent. For years they enjoyed lower rates to which they apparently were entitled. But under schedule rating there is no mathematical way to take cognizance of all these good conditions, which arise more from the excellent moral hazard than from the physical.

It has been proposed that a rate concession be granted towns of this character, but this is a very delicate question. In the first place it is difficult to tell what that concession should be, and, what troubles the underwriters even more, a concession to one town or class of towns is likely to result in demands for similar ones where they should not be granted, but where it would be a delicate task to show why they should not be given.

Practical underwriters know from long experience that German business generally is desirable and some of them would rather write it than similar risks owned by people of other national descent, perhaps rated a fourth higher.

Fire Insurance in the West.

CHICAGO, June 30.—(Special.)—Two notable contributions to the literature on the subject of the reduction of fire insurance expense were made in the West last week. A committee of company managers, union and non-union, issued a letter on the subject, acknowledging the evils which have crept into the business with the result of running up the expense ratio and calling for co-operation to take steps to correct these evils. Insurance Commissioner John A. Hartigan, of Minnesota, read a paper before the Minnesota and North Dakota Fire Underwriters, which proved by all odds the event of the annual meeting of that organization.

Mr. Hartigan often has done things and expressed views which have caused him to be classed as radical, but in this paper he presented sound reasoning and showed a fairness and conservatism, which should commend it to anybody, even though all may not be able to agree with him as to the remedies to be applied. He started with the statement that the cost of fire insurance was too high and that unrest on the subject was evident in many directions. This high cost he attributed to excessive losses and excessive expenses. The losses he blamed in part to the public, which is careless as to construction, safeguarding of the fire hazard and the extent of losses, which it regards the insurance companies as paying. In part he blamed the losses to the carelessness of companies as to over-insurance and the self-interest of agents who are not governed by the highest standard of business morals.

A Publicity Remedy.

The excessive expense he blamed mostly to commissions which are too high, resulting often in no advantage to the agents but in the rise of the broker class. His remedies are a continued publicity campaign to show the public that it pays for the unnecessary losses as well as the unavoidable ones; contingent commissions, to compel agents to be more careful as to selection of risks and overinsurance, and rating done by the inspection bureaus, but with a State board of appeals with power to order reductions where justice demands them.

There was a somewhat ominous sound in the statement:

"Company managers plead unsatisfactory conditions, but plead their inability to cope with these conditions. They say, 'We must meet competition

or lose our business.' If competition must continue to run riot it may eventually be necessary to limit by law the expense of doing business. Excessive expenses of the life insurance companies brought not only limitation of expense but also limit of volume. I am not convinced that the companies cannot properly regulate their own business, but if it be true that they cannot regulate it then it is evidently the duty of the State to do for the companies what they cannot do for themselves."

That the companies fully recognize the possibility, if not probability, of the States' undertaking to regulate the expense ratio for them is evident from the letter of the managers. The fire insurance fraternity of the entire West is stirred up on this subject. In almost every State thoughtful men are asking what the next legislature

will do. Everybody is looking for something to drop, and generally he has not a very clear idea of what it is likely to be.

Stability of Rates.

The public, especially the business portion which already is enjoying lower rates in most places than it is entitled to, demands still lower rates and is not likely to yield the advantage it believes it has in the indiscriminate competition created by anti-compact laws, without some guarantee that rates will not be increased. The agents want stable rates and a stop to competition on cut-rate lines. Unfortunately some of them are willing that losses should remain high, necessitating high rates and giving them large commissions. The companies are with the agents in wanting stable rates and they would gladly satisfy the public in the way of lower rates if losses also could be reduced enough so they could make an underwriting profit at those reduced rates; but most of them are not willing to turn over the control of the most vital point in their business—rates—to men who do not know the business and are subject to political pressure, even though the public is inclined to demand this and many agents apparently would readily concede it as the price for an abatement of present conditions.

It certainly would require a prophet to tell what the outcome will be. The managers of most of the best class of companies are very much in earnest in their desire to reduce expenses, not so much from fear of legislative attempts in that particular direction as from recognition that expenses are too high and that the public has a just grievance for which it is likely to take vengeance in other directions. Some managers also are in hearty sympathy with efforts to reduce the fire waste, even though these efforts do result in some expense to their companies, but there are others who would rather let the other companies do the work.

Perhaps the most hopeful sign in the whole situation is the spirit of co-operation now manifest among managers who in the past have done but little pulling together. If present necessities shall result in general co-operation to reduce expenses, it may pave the way for united work in other directions, notably the reduction of the fire waste. This, in turn, would result in lower rates, which might satisfy the public to the extent that it would consent to the removal of the embargos on rate co-operation, without exacting onerous requirements in other directions in return.

CHARTERED BROKERS THE LONDON PLAN.

A new London feature of insurance interest is the formal incorporation of a previously announced association under the title of "The Corporation of Insurance Brokers and Agents." The final certificate has been received from the registrar of companies under the terms of the Assurance Companies Act of 1909, which comes into force to-morrow and imposes serious responsibilities upon all persons acting as insurance agents and brokers. The aim of the step is to so alter the status of insurance brokers and agents that the public will in time look upon this body of experts in about the same way as they now regard chartered and incorporated accountants. Under the charter of this corporation brokers and agents will be divided into three classes—Fellows, Associates and Members. The Fellows will be brokers who have been in the insurance business five years and more and will be entitled to use the letters F. C. I. B. and A. The Associates need only a record of three years in business, while those who are merely called Members will include all those not eligible as either Fellows or Associates. Under the articles of the association applicants will receive certificates upon examination, and it is expected that in time brokers and agents who lack this sort of certificate will be at a disadvantage.

A Convention for Chicago?

The delegates and alternates from the Chicago Association of Life Underwriters to the meeting of the National Association met last Friday and laid some of their plans for capturing the next national convention for Chicago. The Chicago association nearly always sends a strong delegation to national meetings and this year it will be a large one as well. As Chicago has not had a national meeting since 1893 its association feels fully justified in making a plea.

UNDERWRITERS GUILTY OF CONSPIRACY.

Newport News, Va., June 29.—Dan B. Harris, president; A. B. Andrews, general manager, and twenty-one members of the Southeastern Underwriters Association were convicted here to-day in a magistrate's court of unlawfully conspiring to control insurance rates in this city, and were fined \$500 each. The cases were appealed.

IN NEW ENGLAND

NOTICE.

The New England office of "The Chronicle" has been moved this week to the eighth floor of the new John Hancock Building, which has entrances at 200 Devonshire, 49 Federal and 120 Franklin streets, Boston.

John J. Downey, General Agent.

The Massachusetts Fire and Marine Insurance Company has been fortunate in securing the services of John J. Downey as general agent at its home office in Boston. Mr. Downey, who will assume his new responsibilities on August 1, began his insurance training in the office of the Equitable of Providence, and has been special agent of the Royal for New England for the past twenty-two years. His record of service is exceptionally fine, and that he will add further bright pages to it in his capacity as developer of the agency field of the Massachusetts Fire and Marine may be accepted as a foregone conclusion.

Casualty Men Should Like This.

The committee on prevention of disease and accidents of the Boston Chamber of Commerce, which comprises several eminent physicians and surgeons, and is thus well qualified to give advice, has issued the following suggestions for emergency treatment of injuries that are apt to occur on Independence Day:

Bleeding Not Harmful.—Unless an artery is severed, the bleeding of a wound is an advantage, inasmuch as the oozing blood will help wash away germs of blood poisoning or lockjaw. Bleeding, then, unless excessive, should not be stopped at once.

Source of Danger in Wounds.—The origin of the blood poisoning or lockjaw from explosives lies not in the poisonous nature of the powder or in the wadding, but in the fact that the explosion drives portions of the skin, which always contains many germs, into the depths of the wound. Therefore the first important thing is to cleanse the wound thoroughly.

How to Clean a Wound.—The wounded member should be held under running water, perfectly warm. The surrounding parts as well as the wound itself should be scrubbed with absorbent cotton and strong soap for eight or ten minutes, the running water constantly going to the very depths of the wound. The wounded part should then be wrapped in absorbent cotton and the patient taken at once to a surgeon. No blank cartridge wound is safe until the surgeon is sure there is no wadding still buried in the deepest part of it. To ascertain this the wound must be enlarged and thoroughly explored. Tetanus antitoxin should be injected as a prophylactic in standard doses. Never use court plaster to seal up wounds from explosives.

Many Lives May Be Saved.—It is

fair to say that of the 130 cases of lockjaw due to blank cartridges in the United States last year every one of the 84 per cent. of fatal causes could have been saved if the wounds had been treated as here directed.

It is also probable with the new preventive law in effect and the growth of sentiment favoring a sensible celebration of the Fourth, that Boston's record next Monday will be the most favorable in many years, and that there will be less necessity to resort to the foregoing admirable directions.

A Successful Life Underwriter.

To-morrow, July 1, T. Howard Lewis, manager for Eastern Massachusetts of the Mutual Life, will complete 25 consecutive years of valuable service for that company. Starting in the home office as an office boy on July 1, 1885, he was after an experience of eight years in various departments of the home office, advanced on January 1, 1893, to the position of general agent for Delaware, Eastern Maryland and Virginia, with offices in Wilmington, Del. During a period of two years the new business of the company was increased more than ten times as much as it was the year previous to the establishment of the agency. The success of Mr. Lewis resulted in his promotion to a larger agency, Eastern New York, with office at Albany, January 1, 1895. During the next thirteen and a half years over thirty-three million dollars of new business were placed on the books of the company in eighteen counties. On July 1, 1908, Mr. Lewis was again promoted, taking charge of Eastern Massachusetts with offices in the company's building, Boston, where his efforts have met with the same success as in previous years.

Insurance as a Circulation Booster.

In a review of the career of the late George Newnes, the great British newspaper publisher, contributed to the Boston "Transcript" by Jacob De Haas, occurs this passage, relating one of the methods whereby Newnes obtained circulation for "Tit-bits":

He was the first to turn every copy of his weekly into a life insurance policy, at first worth \$500 at death to the next of kin. The first accident in which a man was killed with a copy of Tit-Bits in his pocket and the policy was paid created a sensation sufficient to make every traveller a purchaser, and there was a time in London when every thrifty traveller had his Tit-Bits, Answers and Pearsons in his grip, being assured in \$12,500 for a week for six cents. So he reached the 500,000 mark.

New England Brevities.

L'Union of Paris, which has been doing a careful surplus line business

in this country for ten years, has appointed Starkweather and Shepley, of Providence, its managers for the United States, and will deposit \$200,000 with the State Treasurer of Rhode Island and \$300,000 with the Farmers Loan and Trust Company, New York, trustee for the company. L'Union has assets totaling \$8,000,000 and a net surplus of over \$2,500,000. It will be represented in Boston, Chicago and New York through branch offices of Starkweather & Shepley.

J. F. Driscoll has been appointed special agent for New England of the North American Accident by Ide & Sewell, of Boston, general agents.

In the opinion of Attorney General Malone, of Massachusetts, the issuance of disability insurance in connection with a life policy does not contravene the anti-discrimination statute if the disability policy carries the proper amount of reserve and may be issued to any one who desires to receive it in connection with a policy of life insurance.

Advices from Hartford relate that Judge Burpee, of the Superior Court, has refused to accept the final report of Frederick A. Betts as receiver of the National Life Association of Hartford. A court hearing with explanations from Mr. Betts is looked for.

Absolute Security and Economy of Management

GOV. HUGHES LIFTS

THE \$150,000,000 BAR.

At the end of the time allowed for the thirty day bills, Governor Hughes signed the amendment to section 96 of the insurance law, whereby companies will be permitted now to write more than \$150,000,000 of new life insurance each year and extending the provisions of the section to all life companies doing business in the State. Included were amendments to sections 73 and 97, the latter relative to limitation of expenses. The governor did not file a memorandum of his reason for a change of mind on a subject of section 96.

A GOOD VETO.

Among the bills disapproved of by Governor Hughes last Monday in the so-called "omnibus veto" list was the one amending the insurance law by providing that a person negotiating fire insurance who delivers to the insured a policy of a fire insurance corporation authorized to do business in the State shall be deemed to be the agent of the corporation; that the receipt by him of the premium shall be deemed payment to the corporation, and that the policy shall be binding upon the corporation unless the corporation shows that such person in negotiating the insurance acted without its authority.

NOW FOR UNIFORMITY.

New York now has the uniform accident insurance policy after a somewhat extended and strenuous game of battledore and shuttlecock between the contending forces of the casualty underwriters and the remnants of black horse cavalry at Albany, the former winning the pennant. This victory is due to the organized effort of the casualty companies as directed and inspired by Edson S. Lott, president of the United States Casualty, and chairman of the legislative committee of the association.

The bill was signed last Saturday by Governor Hughes after long and careful deliberation, and full freedom of hearing for all parties at interest. Its effect will be awaited with a high degree of interest in all insurance circles because the standard fire insurance policy has not accomplished all of that for which it was designed and hoped. The "pink slip" or the "rough rider" pasted thereon makes a lot of difference and can change all the "uniformity" and still be clearly within legal bounds.

The standard accident policy would seem on its face to admit of even more variation and "frills" than are possible with the fire companies, for

the simple reason that the occupation and movements of the individual are extensive, while the fire risk is stationary and readily measured.

Just what "uniformity" means may be judged by consideration of the fact that one big life company issues something like 75 different forms of policies. That is calculated to give "uniformity" a pretty hard tussle if it is ever applied to life contracts.

APING AMERICAN INSTITUTE?

Notwithstanding the increase in the membership of the Institute of Actuaries of Great Britain to about a round thousand, and notwithstanding that there is also the Faculty of Actuaries in Scotland, there has recently been organized in London, "The Society of Incorporated Actuaries." The "Post Magazine" of London comments upon it as follows:

We were not altogether surprised to be unable to trace amongst the Fellows and Associates of the institute and the faculty the gentlemen whose names adorn the prospectus which has reached us, although one member of the council of the society has figured as a student of the institute since 1887. The place of honor on the list of the council is occupied by an actuary who is authorized to certify annuity tables in connection with friendly societies, but beyond this our information concerning the personnel of the society is too limited to form a basis for conjecture concerning its raison d'être.

The Board of Trade of Great Britain has recently defined the qualifications of an actuary within the meaning of the Assurance Companies' Act of last year in a way which confers official recognition upon both the institute and the faculty. It is said that the new society is, at the outset, chiefly composed of persons who have been authorized to value friendly societies.

ELEVATOR ACCIDENTS.

The Aetna has followed its recent publication, "Safeguards," a valuable work suggesting methods of preventing industrial accidents, with another work on the care and operation of elevators. Its announced purpose is to call the attention of owners to certain things pertaining to the use of elevators that very materially affect the liability premium and loss ratios.

INSURANCE "PROMOTIONS"

The matter of "promoting" insurance companies has received much attention from "The Chronicle" ever since the movement was first in evidence and its work is now reflected in the new line just enacted at Albany and designed to remedy present practices in this State. Whether or not it will avail remains to be seen, but it is perfectly clear that the Insurance Department in general and Superintendent Hotchkiss in particular are looking for the industrious gentlemen who are now operating in this State in the promotion of insurance corporations by the "holding" device. This plan is set forth in a statement by Superintendent Hotchkiss, as follows:

During recent years, promoters and stock salesmen have, particularly in the Western and Southern States, been very active in the organization of insurance corporations, their plans usually involving the procurement of a charter authorizing a large capitalization and the solicitation of funds with which to make up the capital through the sale of stock in small denominations to people of moderate circumstances, through the means of attractive advertising and glib agents. Many of these schemes have proved to be fakes, and even the best of them have resulted in the initial capital being reduced by a promotion expense of from 15 to 40 per cent.

In spite of vigorous action on the part of insurance commissioners in various States promoters and agents continue to thrive at the expense of the public. Insurance companies cannot in New York be organized in this way, it being necessary that their capital be paid in in full before they are authorized to do business.

Of late, however, a means whereby the methods used in other States may be availed of has been devised—that is, through the so-called promoting or holding companies, a considerable number of which are, through soliciting agents, now offering their shares to the citizens of New York. The interest of the small investor is usually attracted by delusive statistics, showing the so-called profits of companies in the various insurance fields, and the work is carried on by circularization through the mails and house to house canvass by solicitors. The promoting or holding company, not being an insurance company, can thus sell its stock and use a portion of the money realized therefrom for commissions and promoting expenses, with the result that the investor immediately parts with from 15 to 40 per cent. of his money, though naturally believing that all of it is to be invested in an insurance company and that he will receive a fair return on the par value of his stock.

It is the intention of the Insurance Department immediately to begin an investigation of each of the companies of this class concerning which it now has information, and the people of the State are requested to bring to the attention of the department all schemes of this kind now being pro-

moted in New York to the end that such investigation may be thorough.

That these persons are working energetically in New York is proved by the several inquiries that have recently floated into this office concerning offers of great bargains, particularly in casualty company stocks, that are being made by them. On Monday came an inquiry from a prominent physician concerning an "exquisite" promotion now under way at Philadelphia and which promises gold galore.

The new law will enable the State to take cognizance of these operations, and between this statute and the Federal law concerning the use of the mails for fraudulent purposes it is quite likely that the business will be materially curtailed.

TO STOP GAMBLING IN MARINE INSURANCE.

The British Parliament has undertaken to stop gambling in marine insurance risks. Consul General Griffiths, of London, reports as follows:

A drastic marine insurance act was passed prohibiting gambling on loss by maritime perils. It is principally directed against the employes of shipowners, who, it appears, have trafficked more or less in this sort of insurance. The act makes void a marine insurance policy taken out by anyone who has no bona fide interest in the safe arrival of a ship or the safety of the subject-matter insured, or bona fide expectation of acquiring such interest, and a contract of marine insurance taken out by any person in the employment of a shipowner, not being part owner. Such a policy is declared by the act to be a gambling policy, and renders the person effecting it liable to six months' imprisonment or a fine of \$486, and forfeiture of any money received on the policy. The broker or other person through whom such a policy is effected is subject to the same penalties.

E. C. Cooper succeeded E. Myron Wolf as insurance commissioner of California on June 16.

AETNA LIFE CHANGES.

Secretary J. S. Rowe, of the Aetna Life, who for some months has been in immediate personal charge of the New York city branch office, has effected a complete reorganization and one that is generally commended and congratulated.

Mr. Rowe sends "The Chronicle" the following communication:

Charles H. Phelan, who has been with the company since the liability department was started, has been appointed New York branch manager of our accident and liability department, and also of the Aetna Accident and Liability Company. In directing the work of the various departments Mr. Phelan will have the following assistants.

Arthur M. Murray, for many years experience in the accident and health field in that city, has been appointed superintendent of the liability department.

James Tracy Hill, who has had many years' experience in the accident and health field in that city, has been appointed superintendent of the accident and health department.

John N. Thurlow, who has been superintendent of the burglary, plate glass and fly wheel departments of the Etna Accident and Liability Company, will continue to act in that capacity.

To Conserve Industrial Efficiency.

IN AN address delivered by Edwin W. DeLeon, president of the Casualty Company of America, Tuesday, in Chicago, before the annual convention of the National Association of Master Plumbers of the United States, the general merits of the economic problem in regard to the care of workmen were treated by him. He entitled his address "The Conservation of Industrial Efficiency."

"One hundred years ago," Mr. DeLeon said, "the first labor legislation in the civilized world was enacted in England and, strange as it may seem, it had its origin in the unregulated employment of women and children that led to abuses so shocking as to arouse the nation to action. This resulted in the passage of the Factory Acts, with which the names of Lord Shaftesbury and Robert Owen will be forever associated. The labor legislation of the entire civilized world, and especially of the States of this country, has made great progress since that time and has come at the present day to mean the regulation of hazardous occupations, the safeguarding of dangerous machinery, the limitation as to age of employment and of hours of labor and the periodical inspection of plants. * * * * Under present day conditions industrial efficiency is slowly and oftentimes laboriously acquired and its proper conservation is as much a matter of national concern as the conservation of our natural resources. In the same way that the reckless and unlicensed waste of natural resources has been checked by Federal intervention, so will the unnecessary expenditure of health, strength and even life be reduced and in time practically eliminated by a comprehensive adequate system of regulation and prevention.

Trainmen and Fishermen.

"According to figures compiled by the United States Government, the annual mortality among wage-earners on account of accidents of occupation is from 30,000 to 35,000, while the number of non-fatal accidents is more than 2,000,000 each year. It is perhaps not generally known that the greatest percentage of mortality existed among the fishermen of Gloucester, Mass., being nearly 12 per cent. of the total number of men employed, while among railroad trainmen the percentage was only about 8 per cent. for the period of ten years ending 1907."

After a short sketch of some of the more important legislative acts re-

garding the employed in this country Mr. DeLeon continued:

"President Roosevelt in a speech at the Jamestown Exposition in 1907 stated that workingmen should receive a certain definite and limited compensation for all accidents in industry, irrespective of negligence. In his message to Congress in 1908 he said: 'Probably in no other respects is our legislation, both State and National, so far behind practically the entire civilized world as in the matter of liability of compensation in accident or injury.'"

Mr. DeLeon then rehearsed the history of the Federal Liability Act of 1908 and the Federal Workmen's Compensation Act, which was passed soon after. He called attention to the European tendency to substitute a system of State insurance for the liability of the employer for negligence. "There is a great contrast between the facility of social legislation of this sort under the flexible constitution of a nation like Great Britain," he said, "and the difficulty of securing similar legislation in forty-six sovereign States, each with its own rigid constitution and with conditions oftentimes designed to impede the passage of effective labor legislation." Emphasis was laid upon the difference in public opinion in States with slight manufacturing experience and the older States of the Union, where the business interest of the community is alive to the fact that humanitarian conditions of employment mean increased productiveness and a higher degree of efficiency.

"Voluntary co-operation between employers and employees," Mr. DeLeon added, "will furthermore supplement legislation in effecting these desired changes. This tendency is clearly indicated by some of the great industrial concerns of this country, that have adopted, solely through this voluntary co-operation, profit-sharing schemes, pension systems and mutual insurance against the risks of employment."

FAVOR CONTRIBUTION.

The Brotherhood of Carpenters and Joiners, at their annual meeting, took action last week in favor of employers liability insurance to which the employees should also contribute. They favor a scheme, calling for a contribution of one-sixth from the employees, one-half from the employer and one-third from the State, a compulsory insurance plan being favored.

This is the first action on the part

of any labor organization in the United States, avowedly favorable to compulsory insurance with contributions of employees, as a solution of the employers liability problem.

NEW YORK

OFFICE:

46 CEDAR STREET, CITY.

THE GOOD END OF

A BAD BEGINNING.

For about fifteen years the State of New York has required all liquor sellers and dealers to give a bond for good behavior. When the famous black horse cavalry was in its prime at Albany the political grafters made it quite a plum for the surety companies that they represented, because there were no losses and no saloon-keeper ever violated the law, so far as "statistics" indicated.

This condition produced that inevitable fringed edge of liquor selling society which styles itself "brokers."

Every time the whirligig of politics revolved another company seemed to be favored with this business and the predecessor retired from the field as discreetly and quietly as possible. Some of them made a fairly good get-away, but at least one was badly crippled, although it has now recovered.

The point of interest at the moment is centered in the fact of the wretched condition to which one company reduced itself by reason of over-indulgence in this excise form of dope and the pleasing intelligence to the stockholders of another one that it has reformed and will "never again."

Incidentally comes a most gratifying commendation of the work this journal has done in reforming the company practices in regard to entering into these self-destructive contracts. The new laws just enacted will do much to remedy the evil in future, but by no means will they make the writing of the so-called Raines law hotel bonds, a business that any company can undertake without impairment of credit and a slump in its stock value, not theoretical but literal. As an illustration there has been offered within the month a company's shares at \$59 for which \$150 was paid less than two years ago.

As a further illustration of the folly of the young companies putting their estate to float by bonding the liquor saloons it may be well to quote from the recent report of the examination of the Fidelity and Casualty Company, made by the Insurance Departments of New York and Texas. As an illustration of the experience of a careful company, the report of the Fidelity and Casualty Company states with reference to excise business of the company for the year covered by the examiners:

Premiums, \$48,654.12; losses, \$51,477.14.

There in the outline is the whole story of excise bonding.

Governor Hughes has just signed the amendment to the excise law that

permits the saloonkeeper to deposit \$2,000 in cash in lieu of a surety bond, and this measure may serve to restrain the newcomers from venturing into this field. While the measure is highly gratifying to the surety companies for more than one reason and is applauded by the liquor dealers as well, it presents some curious phases, two of which may be worth mentioning. First, why when the bond is \$1,800, there is tacked on an additional \$200 for "contingent expenses," as the act runs? It was explained that each forfeiture cost the State an average of \$200. What becomes of the \$1,800 is not stated and has not been discovered. Annual reports tell little. Department demands are ever on the increase. The income must be consumed either by increase of present salaries or putting additional henchmen on the pay-roll. That is of interest, however, to the surety companies only as it shows them what silly asses they have been making of themselves in feeding the grafters.

One surety man figures it out that the saloonist who puts up \$2,000 deposit is in direst need of a bond and, by implication, cannot get one from a surety company for a deposit of \$1,800 and that it expects to violate the law and can afford to forfeit the deposit. And another says that the effect of the new law will be to create a new class of grafters on the liquor dealers, who, bad as they are, are infested and infected by far more disgusting and contemptible grafting parasites.

From the standpoint of the disinterested onlooker it would appear that the mere fact that a man tendered the State \$2,000 in cash as a bond for a liquor license indicated clearly that it was hush money. On the other hand it indicated that the applicant was unable to procure the endorsement of any responsible and respectable surety company.

Another surety man, familiar with excise matters, figures it out that those who put up their \$2,000 forfeit will be no worse off under the new conditions than they were under the old. Formerly they have been preyed upon in different ways to an extent that equaled the amounts.

The whole situation is quite interesting. The gratulation afforded here is that present and future companies may put themselves in a position where a reasonably accurate appraisal of their shares of stock can be made.

Merely Incidental.

There were 105 warrants for Sunday law violations issued in this city on Monday last. That means a possible loss of \$200,000—to sureties.

FOR MORE SAFETY DEVICES.

The increase of accidents in this city for the past month over the corresponding month of last year is interesting in view of the failure of the public service corporations to obey the orders of the Public Service Commission to instal safety devices.

This is the comparative record as given out in the commission's report for May, just given out, relating to the railway record:

	1909	1910
Passengers	1,962	2,063
Not passengers	559	487
Employees	459	640
Total	2,980	3,190

IN RE COLUMBUS CASUALTY.

A temporary injunction was obtained last week at Columbus, O., by E. J. Smith, owner of 210 shares of capital stock, restraining the Columbus Casualty Company, a recent promotion, from disposing of any part of its assets, pending a hearing.

The incident is the latest of a series which have brought this concern into the limelight for some weeks past. It was found impaired when the Ohio insurance department examined it, and Mr. Smith claims that he put up \$25,000 to tide it over.

Then came the announcement that a securities company had been organized under a New Jersey charter to "hold" the Columbus Casualty, and about half a dozen other concerns operating under West Virginia and Delaware charters from Philadelphia, and consolidate them eventually.

Now comes Secretary Galloway, of the Columbus Casualty, with an interesting statement that may add to the gaiety of the promoters world. He says:

The bold attempt to secure control of the Columbus Casualty Company has been thwarted.

The Columbus Casualty Company is a corporation with home office in Columbus, Ohio, capitalized at one hundred thousand dollars (\$100,000) fully paid up. The charter was secured in 1908, and owing to the business or financial depression just preceding this period, it was necessary to underwrite two hundred and ten shares (210) of the capital stock, which at that time was unpaid. This amount was guaranteed by a resident of this city, and the company proceeded to organize and write business. In October, 1909, the State insurance department, after an investigation, ruled that the company was impaired six thousand dollars (\$6,000) over the legal limit. This, of course, was due to the cost of development and the fact that the company started without a surplus. However, the stockholders made up the impairment by depositing their stock as security on a loan for the amount necessary to make the impairment good. The amount of this note was left in the bank on a certificate of deposit, and the guarantor of the 210 shares of stock above referred to was an endorser on the note.

When this note became due on May 21, 1910, Frank R. Shinn, treasurer, and one of the trustees of this company, presented himself at the bank holding the note, fully prepared to negotiate payment of the same, and was informed that the note had been taken up with the stock security earlier in the day by the endorser. It then developed that this party was making a systematic attempt to get control of the company, and an appeal was at once made by the officers of the company to the State superintendent of insurance of Ohio, who immediately ordered an examination of the company's condition, which resulted in a showing of admitted ledger assets of \$109,523.97. The State insurance department, after reviewing the

situation, informed the party who by questionable methods had secured the stock that he could not vote the stock at the stockholders' meeting on June six.

It should be understood, of course, that the party holding this stock had no monetary interest in it, outside of his endorsement on the note, which the stockholders were ready and will relieve him of.

The above is given you as the true facts in the matter and would respectfully refer you to the State superintendent of insurance of Ohio for a verification of same.

WORTH OF A WHOLE MAN.

On Monday the Appellate Division affirmed a verdict of \$30,000, obtained by Charles McMichael against the Federal Printing Company, of this city, for the loss of his right hand and part of four fingers of his left one.

The verdict was reached on the contention that the machine at which he was employed was defective. This apparently emphasized the growing recognition of the public appreciation of the liability of the employer as defined in the new statute in this State to be effective to-morrow.

This verdict instantly raises two subjects for thought: First, the employer's need of liability insurance, and, second, the query as to what the amount of the verdict would have been, had the man been killed instead of only maimed. Usually the verdicts in industrial accident life losses have averaged considerably under \$5,000.

This prompts the caption: "What's a Whole Man Worth?"

Over \$15,000,000 is annually poured into the coffers of those who exploit and advertise "fake" consumption cures, according to a statement issued by the National Association for the Study and Prevention of Tuberculosis, in session at Boston on Monday. The report states that for this vast sum the victims receive nothing in return but are often deprived of the chance for a real cure.

Federal Inquiry for Workmen.

JUST before the adjournment of Congress the United States Senate sent to the regular calendar for later consideration the House bill for Federal inquiry as to compensation of workmen. As the proposed inquiry would include in its scope the problem of employers liability there is unusual interest in the report which the House committee has made on the bill. In this report the general question of compensation of workers is discussed rather thoroughly, and it is easy to understand from this how important the inquiry may be.

The report of the House committee follows in part:

One of the most pressing problems of interstate commerce that to-day demands the attention of Congress is that of wisely and equitably adjusting the loss to workmen of life and earning power, which is the certain and inevitable consequence of modern methods of transportation.

The general principle of liability is seriously and sometimes fatally restricted by the superadded limitation of contributory negligence.

Employees to-day bear both the physical and financial loss in a large percentage of accidents, with disastrous effect upon their families. Employers, though endeavoring to conduct their business with care, are harassed by a constant succession of suits for negligence, being subjected to great waste of energy and money in defending them, and being mulcted with large verdicts when they have no real moral blame.

Proposed Legislation.

There has been introduced and is now pending before the judiciary committee a bill, H. R. 1, the object of which is to eliminate entirely the existing common law doctrine of liability with all of its modifications and to substitute therefor statutory compensation. The bill is limited by its terms to persons carrying on occupations and trades subject to the regulative power of Congress, and changes the law for injuries received on mail routes.

Hearings have been had upon the bill. Notice was given to the leading common carriers throughout the country and to the representatives of the employees. They appeared before the committee, and it was frankly stated by the representatives of the carriers and of the locomotive engineers that in their judgment the time was rapidly approaching when some method of the kind proposed by the pending bill, if a proper and equitable basis could be found, would be the best possible solution of the problem.

Some Objections Urged.

The objections urged before the committee against the present system of liability were, in substance—

(1) That uncertainty of rights and obligations involves suffering to the workmen and hardship upon the employers.

(2) That only a small proportion of

workmen injured by accidents of employment get small compensation, and that as a result many, and their dependents, are forced into a lower standard of living and often become burdens upon the State through public or private charity.

(3) That the system is wasteful, being costly to employers and the State and of small benefit to the victims of accidents, as a very large proportion of amounts recovered is paid for costs of litigation and for attorneys' fees.

(4) That the system is slow in operation, involving of necessity great delay in the settlement of cases, and that delay is fatal to families dependent on daily earnings.

(5) That the operation of the law breeds antagonism between employers and employees.

(6) That antagonism of interests retards development of prevention of accident measures.

As a result of these hearings the committee and the parties directly interested, the common carriers and the employees, were of the opinion that it was important that more information of a definite, tangible and thorough character should be obtained before a scheme could be devised which would be satisfactory to employers and employees.

Eight different States have appointed commissions to investigate the subject. One commission, that of the State of New York, has made its report.

For Congress to intelligently act upon this very important subject and to frame adequate constitutional legislation for equitable distribution of this great loss of earning power necessarily incident to the operation of interstate railways, many facts must be obtained, much detailed accurate information provided.

The object of this resolution is to provide for the appointment of a commission with full authority to obtain by exhaustive investigation available data upon a great number of important subjects that must of necessity enter into such legislation. With this information obtained the particular committee of the house to which such proposed legislation will be referred will be in position to reach a conclusion which will be fair and just both to the employer and employee.

ADDRESS, AGENCY DEPARTMENT,

**The Empire State Surety Co.
NEW YORK**

A BIG OPENING.

The Federal postal savings bill, just signed by President Taft, opens a wide field for the surety companies in the matter of depository bonds. While the act itself, on its face, so far as indemnity goes, puts the banks of deposit of these postal funds on practically the same basis as the National banks, there is a general law that requires a bond from depositories of public funds. When every postoffice in the United States becomes a savings bank there will be a lot of new business for surety companies and many changes in the established habits of the people.

The W. M. Byrne general agency at St. Louis, representing the Maryland Casualty and National Surety companies, has resigned the latter because the former has taken up surety lines. The lines are forming for the coming conflict.

Franklin C. Elder, long connected with the Gallatin National Bank and the Bankers Life Insurance Company, and later in charge of the management of a large Stock Exchange house, is now with the New York Life Insurance Company as advisory representative. His friends wish him every success in his new venture.

The Massachusetts Fire and Marine is now entered and doing business in Rhode Island, Connecticut, New York, New Jersey and Pennsylvania. It will be represented in New York by Major A. White, at Philadelphia by Platt, Yungman & Co., and at Providence by Beach & Sweet.

Nico De Coers van der Velde died last week at his home in this city. He had been for twenty-five years the general inspector for the Germania Life Insurance Company. He was born in Amsterdam, Holland, fifty-four years ago.

The burglary insurance situation in New York seems to be reaching a fixed basis. When the new secretary, Nelson D. Sterling, gets down to active work there is a strong probability that the troubles that have so long afflicted the association will be ended, at least for some time to come.

"Warring on Injurious Insects" is the title of Samuel Hopkins Adams' article in the July "American Magazine." Says Mr. Adams in the course of his remarks: "The greatest potential discovery is that of the parasitic

benefactor which should perform upon the American house fly or the mosquito the miracle of exorcism which St. Patrick wrought on the snakes of Erin. In round numbers, \$300,000,000 would not be an overestimate of the consequent saving in human life and earning power, plus the increased value of real estate."

A press dispatch from Alton, Ill., states that Charles W. Freeman, a young traveling salesman, is in a predicament as a result of having applied for a mail route in Yellowstone Park. Freeman made application for the position and later took a traveling position, which is more lucrative. To-day word came that he had been awarded the mail route and was to begin work July 1.

Freeman wired he could not accept and the officials wired back that he would have to do so or forfeit a bond of \$5,000 and spend twelve months in jail. This must be interesting for the sureties and certainly sheds light on the intricacies of suretyship.

The Standard Life, of Pittsburg, has been incorporated under the laws of the State of Pennsylvania, with an authorized capital of \$300,000. The company proposes to take over the Standard Mutual Life, of that city, which now has an annual premium income of over \$160,000 and is writing at the rate of about \$400,000 new business per month.

Sinclair E. Allison, formerly connected with the actuarial department of the Canada Life and the New York Life, has been appointed actuary of the Reliance Life, of Pittsburg.

Arthur Earle, actuary of the Columbian National Life, has resigned to become secretary of the newly organized Travellers Life Insurance Company, of Montreal.

British Pride and Pockets.

AN ILLUSTRATION of American influence in London is given by "The Finance and Insurance Chronicle," of London, in its current issue. It seems that the interest of the British fire underwriters' pocket has led the editor of this journal to ask what matter if Englishmen have to pocket their pride and follow the Americans' lead in establishing differential ratings regarding building construction. The discussion by the London editor follows:

The time has undoubtedly arrived when the necessity for differential rating of "buildings" and "contents" should be carefully considered by every fire office. Disguise the fact as we may, and deprecate as strongly as we like the unholy suggestion that we should follow the lead of the American, who has already established the system in the most elaborate and mystifying fashion, the importance of discrimination is in no way diminished. Why should the rate for the structure be the same as that for the property contained in it? The creation of a sensible answer has always been beyond us.

Structural Defects.

It may be that in our readiness to appreciate the hazardous nature of a large percentage of stocks we unconsciously ignore the dangers which lurk in the uncertain ingredients of twentieth century bricks and mortar. Or probably we fail to take into consideration that, in many cases, insurances on "building" extend to cover property other than that which the strict interpretation of the term might be understood to indicate. It seems to us, however, in spite of all the arguments enumerated in its favor, that the imposition of an all-round rate is frequently an unpardonable injustice. We are prepared to admit that where a building happens to be of defective construction, or abnormal height, or is lined with wood throughout, or boasts the existence of well-holes and hoists, this decision might be somewhat modified. But a moment's reflection upon the unhappy position of any well-built modern risk, minus these drawbacks, convinces us that not otherwise should identical rating be adhered to.

Enormity of Stock Losses.

In it, for the purpose of an example, we will assume there is deposited the extensive stock-in-trade of a draper and milliner, and that a fire originates in one of the upper stories. The brigade arrives, the plug is located, bang goes the pump, and in less time than it takes to tell the water is pouring down the staircases and percolating through the lath and plaster ceilings in inconceivable fashion, whilst every room is filled with a dense, black smoke. How does the office fare in regard to the settlement of the claim? The loss on the building, practically speaking, is imaginary, for even plastered walls and ceilings retard the progress of a fire and give time for the application of the

means of extinguishment; but that on the contents, aggravated by the action of smoke and water, is, in all probability, well nigh "total."

Under-Insurance Evil.

This miserable habit of under-insuring would, we believe, be entirely abolished if differential rating were adopted, and the office would then not be compelled to sacrifice—as it is fearfully afraid it will—a considerable proportion of its premium income. It must not from these remarks be taken for granted that the differential treatment of buildings and stocks is wholly unknown on this side of the Atlantic. In the writing of the commonest form of insurance—i. e., that applicable to the ordinary private dwelling house—it has long been the custom to charge a rate of 1s. 6d. per cent. for the building and 2s. for the contents, whilst for pictures of more than the average value as much as 4s. 6d. per cent. is demanded. Certain portions of the cotton manufacturers' premises have, for the past thirty-five years, also been favored with special schemes of distinctive rating, and the delightful variability of the charges made for farming property need scarcely here be called to mind.

Unfilled Prophecies.

During the last few years varying allowances have been provided (on paper) for the buildings and contents of risks constructed of fire-resisting materials, but whether it is that precious few conform to the stringent conditions prescribed, or that offices never take the trouble to ascertain whether they do—preferring to stick to the old rule of rating each story as a shed—we are not in a position to say. The fact remains, however, that we have never yet come across a policy with a "construction" discount allowed. Yes; we are sadly behind-hand, and the wonder is that some enterprising individual does not float a company with the object of making a system of differential rating its specialty. It would be assured of success. What matter if we have to pocket our pride and follow the American's lead? Under certain circumstances—rare, undoubtedly—he is worthy of our patronage, and endeavoring to improve the present method of rating our fire risks is one of them.

 Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
 Divide temporary insurance values by immediate temporary annuities.
 Computing Annual Endowment Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.
 Computing Annual Pure Endowment Premiums:
 Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
 By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
 Computing Annual Semi or Double Endowment Premiums:
 Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
 Computing Limited Premiums:
 Divide the proper single premiums by immediate temporary annuity.
 Computing Surrender Values:
 Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
 Extended Insurance with Fractional Paid-up Endowment:
 Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
 Computing Terminal Reserves:
 Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
 Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
 Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
 Warranted Commissions for New Business.
 Surrender Values.
 Dividends.
 For these purposes the "select and ultimate" will be most useful.

NEW YORK'S SAFE AND SANE FOURTH.

A Roll of 191 Injured Persons as Against 359 Last Year and 38 Fire Alarms, Instead of 149, the Record of the Day Under the Plan Fathered by Mayor Gaynor.

NEW YORK had a safe and sane Fourth of July to an extent that completely justified the steps taken by Mayor Gaynor to lessen the roll of dead and injured, which newspapers have been accustomed to publish on the morning after. The announcement of New York's intentions had a sympathetic effect throughout the country, which ought to be more marked next year. The following table tells part of the city's story of the day:

	1910	1909
Killed	2	3
Injured	191	359
Injured, probably fatally....	2	4
Injured by gunshots and stray bullets	35	40
Fires	38	149

In the Children's Court on the morning after four boys were arraigned on charges of discharging pistols in the public streets, as against more than 200 on the corresponding morning of last year. Not only was the number of fire alarms reduced from 149 to 38, but no serious blaze occurred and the estimated maximum loss was only \$2,000.

Mayor Gaynor on Tuesday referred to the reduction in the number of casualties owing to Fourth of July celebrations, calling attention to the fact that the present good had been done with the laws still inadequate, there being nothing to prevent the public from buying fireworks in Jersey City and bringing them into this city.

From the mayor's remarks it was judged that by next year there might

Courtesy of the New York World.

ANOTHER KNOCKOUT.

be some more effective way to prevent the indiscriminate setting off of fireworks than the mere refusal of licenses to retailers.

As to the old-fashioned celebration which replaced the indiscriminate dis-

charge of fireworks, the mayor had these things to say:

"The parade was fine. I served my time as a member of the National Guard and used to think that we looked fine when we turned out, but

I never saw the National Guard look so fine as yesterday. The city may well be proud of them.

"A few people did all they could to create dissensions in the National Guard about parading, but they failed. It is astonishing how mean some people can be. I want to express my sincere thanks to Major-General Roe for calling out the National Guard. Most people seem to think that I called out the National Guard. No, General Roe came to me at the very beginning and entered into the matter in the most wholesome way, and also Colonel Appleton and other officers.

"I want to also express the thanks of the mayor to President Finley and his committee. Considering the short time, only about three weeks, which they had to do their work, they did wonders. And the community subscribed all the money that was necessary.

"And last, but not least, I desire to express the mayor's thanks to Alderman Marx, a veritable steam engine in boots, who was the first person to speak to me about having the celebration, and who did more than any other man to make it a success."

THE NEWSPAPERS AND THE HOLIDAY.

The Sun.

By the enforcement of the ordinances and regulations imposed by the authorities against the sale of fireworks at retail the city had a day of comparative quiet and peace for the Fourth of July and was not kept in a ferment of unnecessary noise during the week preceding the holiday. Nerves and health were protected, and doubtless many youngsters who might have been gloriously and patriotically mutilated have whole bodies to-day. Were there no other gain to be put down to the credit of the safe and sane Fourth its vindication would be clear from these facts.

But there are other things to be put to its credit. The patriotic exercises cannot have been without good effect, not only on the children but on their elders. The parades furnished amusement and instruction for thousands whose day might otherwise have been without spectacular diversion. The concerts provided a form of enjoyment appropriate and much to be desired. The millions of New Yorkers who cannot leave town for even a day had opportunities for rational pleasure wherever they may live.

But the principal gain is to be found in the shortened list of dead and injured. Here safe and sane spells something tangible, something every citizen can measure and comprehend, something that needs no explanation or defence.

The World.

The success of the new method of celebrating the Fourth surprised New

York. So great a change in a single year had scarcely been anticipated. The police and the city's law officers have made an admirable record and set a precedent which leaves little danger that we shall ever go back again to the old way of tumult, fire and blood.

It was hard facts like the seven persons killed in New York last year, the nine killed in Philadelphia, the twelve killed in Cleveland O., in 1908, the annual heavy loss by needless fires, that commended the experiment of the New Fourth, but it made good in other ways. It spared the city a fortnight of preliminary noise and danger. It saved 50,000 invalids from being driven to distraction.

Nor was the success of the old-fashioned Fourth all on the negative side. It was interesting. The parade was fine. The city's fireworks were a reasonable compromise with custom. Numerous public exercises served to remind people what the Fourth is for. If some of them were ill attended it was because other rational methods of spending a holiday proved more attractive.

The old-fashioned Fourth has come back to New York to stay.

The Tribune.

The "sane Fourth" yesterday is a standing rebuke to those who follow the counsels of despair. The annual celebration got worse from year to year, its noise more deafening and the fireworks more fiendish and deadly, despite all the preaching against its barbarism in the press and elsewhere. Its evils seemed to be rooted in human nature as firmly as the evils of any other institution whose improvement is despaired of—in the love of noise and flame and in the weakness of parents. Yet with human nature unchanged, and with very little effort, the old barbarism was practically wiped out, for a day at least, and we hope for good. Large parts of the city were as quiet as they are on Sunday, and where powder was burned the deadly nuisances of the past, the cannon cracker and the bomb, were unheard, and even the ordinary little firecracker was a rarity. For the most part children seemed to enjoy themselves just as much with minor explosives as they used to with charges of powder big enough to blow up a battleship. The saving in wear and tear on the people's nerves shows in the record; the saving of life, limb and property appears in the short accident roll.

Mayor Gaynor deserves congratulations on the success of his plan and on his courage in putting a stop to the general sale of fireworks and directing public attention to a proper celebration of the day.

EXCHANGE COMMITTEES.

Willis O. Robb, manager of the New York Fire Exchange, has issued the following announcement:

W. B. Ward, of Ward & Crawford, retires from the arbitration committee and is succeeded by D. T. Walden, of the agency of Whilden & Hancock. The arbitration committee now consists of the following members: C.

W. Sparks, chairman, London Assurance Corporation; A. E. Miller, of A. E. Miller; F. H. Crum, North River Insurance Company; J. H. Kelly, Westchester Fire Insurance Company; J. W. Nichols, Queen Insurance Company; J. F. Hastings, North British and Mercantile Insurance Company; D. T. Walden, Whilden & Hancock.

Lyman Candee, of the Globe and Rutgers Fire Insurance Company, retires from the brokerage committee and is succeeded by Arthur Lensen, Jr., of the Hamilton Fire Insurance Company. The brokerage committee now consists of the following members: M. J. Ennis, chairman, Peter Cooper Fire Insurance Company; W. D. Sammis, W. D. Sammis & Co.; C. A. Garthwaite, Stuyvesant Insurance Company; T. A. Ralston, Northern Assurance Company; W. M. Morris, Aachen and Munich Insurance Company; C. C. Wayland, of C. C. Wayland; A. Lensen, Jr., Hamilton Fire Insurance Company.

F. H. Way, of the Williamsburgh City Fire Insurance Company, retires from the executive committee and is succeeded by Charles S. Conklin, of the Assurance Company of America. The executive committee now consists of the following members: Geo. C. Howe, chairman, Niagara Fire Insurance Company; Charles A. Norris, United States Fire Insurance Company; Wallace Reid, of Wallace Reid; E. E. Pearce, London and Lancashire Fire Insurance Company; D. M. Darby, Caledonian Insurance Company; C. G. Smith, of C. G. Smith; C. S. Conklin, Assurance Company of America.

G. W. Montgomery, of Montgomery & Fountain, retires from the rate committee and is succeeded by F. A. Pawley, of the agency of F. A. Pawley. The rate committee now consists of the following members: W. B. Ogden, Jr., chairman, W. B. Ogden & Son; E. F. Schleyer, Norwich Union Fire Insurance Society; Otto Delleve, Phoenix Assurance Company; H. J. Ferris, Home Insurance Company; James Marshall, Northern Insurance Company; H. E. Hess, Fidelity-Phoenix Fire Insurance Company; F. A. Pawley, of F. A. Pawley.

E. G. Letzkus has been appointed manager of the liability department of the Philadelphia Casualty Company.

IN NEW ENGLAND

THE FOURTH IN BOSTON.

Boston's "safe and sane" Fourth was a glorious, tremendous and unqualified success. The weather man did all he could to help it, the crowds were large and orderly, the laws were obeyed, and not in years has the day gone by with so little to deplore in its wake. According to a table got up by the Boston "Globe" there was no one killed in consequence of the celebration, and the injured numbered only twenty-eight. Compare that with the Boston record of the Fourth for the three years preceding, as reported in the "Boston 1915" publication, and we have for 1907 three killed and fifty-nine injured; for 1908, six killed and one hundred and ninety injured, and for 1909 five killed and one hundred and sixty-seven injured. Certainly a reassuring and gratifying advance, and the particular beauty of it is that, from the description of the injuries, the toy pistol was conspicuously by its absence, and no cases of tetanus are to be apprehended. The fire record for the city was equally gratifying, there having been but thirty-eight bell alarms from 6 p. m. July 3 to midnight, July 4, as against fifty-six last year. The total loss for the day will not exceed \$4,500, and few of the calls were traced to the use of fireworks. So the law and the elements not always kindly to the life, fire and casualty underwriter, did deal gently with him this time.

Showing of Massachusetts Bonding.

Report of the Massachusetts Insurance Department on the examination of the Massachusetts Bonding was filed Tuesday, and shows up most creditably for that company. Its income for 1909 was \$632,563, of which \$588,597 was for net premiums; disbursements for the same period, \$339,540; admitted assets end of 1909 were \$1,058,588; liabilities of \$359,291, plus \$500,000 capital, leave \$199,296 net surplus, or surplus to policyholders of \$699,296. Quite a showing for a company which did not begin business till November 26, 1907. The department finds that the underwriting of the company appears to be conducted with conservatism, ability and profit, and that its investments are carefully, conservatively and ably administered. It criticises the accounting department, but has assurances that satisfactory changes will be made.

Interesting Particulars.

The May bulletin of the Boston Manufacturers Mutual Fire Insurance

Company contains some interesting particulars. Among them is the gratifying information that at a fire in the plant of the International Paper Company at Palmer's Falls, New York, which occasioned a loss of over \$5,000, the old hands and the new hands worked together in extinguishing the fire, although a strike had been going on at that plant for some time and was still unsettled. The labor situation was entirely ignored, giving place to the obligations of good citizenship. The fire, which completely destroyed a building of the Detroit Valve and Fitting Company at Wyandotte, Mich., again afforded an example of the fatality which sometimes pursues the best intentions. This building had been but recently completed, and was under contract for a sprinkler equipment, at the time the fire occurred.

Connecticut Association Protests.

The Connecticut Association of Local Fire Insurance Agents, at its mid-summer meeting, held at East Norwalk, the 24th ult., unanimously adopted a resolution, calling the attention of the companies interested in the expense reduction movement to the fact that, while improved public fire protection, better and fireproof construction building, and increased number of sprinkler equipments in risks of various kinds, are constantly resulting in lower rates to the insuring public, and a decreased loss ratio and better classification for the companies, the local agents, who are a prominent factor in bringing about these improved conditions, are having their incomes seriously decreased, while the cost of living and conducting the agencies has greatly increased. It is therefore respectfully requested that a greater commission than 15 per cent. be allowed as compensation to agents. A committee of four was appointed to advocate the resolution with the companies.

New England Brevities.

The liability department recently established by the United States Fidelity and Guaranty, will be placed in charge of George A. Priest, for the past sixteen years identified most creditably with the lead office of the United States branch of the Employers' Liability in Boston.

The Johnson-Jeffries mill is now over, but prior thereto a bright broker of Boston got out what looked like a ticket to the fight. A closer inspection revealed this inscription: "There is some doubt who will be the best, JEFFRIES or JOHNSON, at the Reno, Nev., fight, Monday, July 4.

But there is no doubt I have the best accident policy. NO FIGHT to get the money."

Another Paris fire insurance company, La Nationale, has decided to do a direct business in the United States, and has appointed Starkweather & Shepley of Providence its general managers for this country.

Alexander S. Browne, of Boston, inspector of agencies for the north-eastern department of the New York Life, last week completed twenty years of continuous, meritorious and successful service for that company.

The Boston Life Underwriters Association has appointed the following delegates to represent it at the National convention in Detroit next September: Regulars—Percy V. Baldwin, Edward Marsh, James H. Lake, Clarence C. Miller, Vernon B. Swett, Fred C. Sanborn, Harry M. Haven, John A. Voodry. Alternates—Charles W. Gammons, Albert H. Curtis, Chas. E. Townsend, John S. Cranston, Chas. H. Flood, Chas. E. Fish, T. Howard Lewis, William M. Bunting, Jr.

WESTERN FIRE OFFICES AND THE NEW RULES.

Companies in the Western Insurance Bureau entered July with most of their contracts in Illinois adjusted to the new commission scale agreed upon by that organization. It took fast work on the part of special agents, but the local agents as a rule had learned what was coming and had prepared for it. The agents who made serious objection to the change of their contracts were comparatively few in number. There were some, however, who wrote very ugly letters and in a few instances field men were told they could take their supplies.

Readjustment of outstanding agency contracts is all that has been undertaken so far, and very little is being said as to what future steps will be in the program.

Some interesting situations are likely to arise, although they may not prove to be of serious moment. In a few cases agents have notified small companies that as their commission incomes are to be reduced it will be necessary for them to reduce expenses and they have decided, therefore, to reduce the number of their companies. No great number of such cases are looked for, but the smallest of the bureau companies will probably lose some agents.

Some well informed field men express the belief that when the full program is carried out, those non-union companies which fail to join the bureau will be left with the third rate agencies—those which are out for excess commissions, which are not high-grade in their underwriting and are slow pay.

One change already noted in Illinois is the affiliation with the Illinois Field Club of the representatives of the Connecticut, National Union, Milwaukee Mechanics and Milwaukee Fire, which have entered the bureau. It is much to be hoped that the other bureau companies not now affiliated with the field club will join it soon. Otherwise some serious embarrassment may be experienced. The bureau deals mainly with commissions and does not take cognizance of rates. The field club deals with rates and not with commissions. If the bureau decides upon separation there may arise cases, unless all bureau companies are in the field club, where non-club companies will be left in bureau agencies, and if they cut rates there will be no power to discipline them, while club companies, which can be disciplined for rate infractions, would be forced out into non-affiliated agencies.

ILLINOIS FIRE MARSHALS.

The action of the Supreme Court of Illinois last week in reversing itself and holding the law regarding the parole of prisoners from the penitentiary valid, will probably result in the State fire marshal of Illinois becoming active shortly. The ground on which the court first declared the law void was because it created the parole board and provided for its compensation in one act. While no mention was made of the fire marshal act it was drawn so similarly that the decision was believed to affect it also. Accordingly the State auditor was not safe in drawing warrants for the compensation of the fire marshal and his assistants and the expenses of the office, so the bureau has been inactive for about six months. The court having changed its position, doubt as to the validity of the fire marshal act is expected now to disappear.

WESTERN FIELD MEN.

Considerable sentiment exists among Western field men in favor of having only one field organization instead of two in each State. Previous to ten years ago each State had its State board, except where the laws prevented, and its membership included both union and non-union field men. Following separation the Western Union required most of the State boards to go upon a union basis and in some of the States the non-union field men organized separate bodies of their own which co-operated with the union organizations to a greater or less extent.

Within the past two or three years the last of the State boards have been deprived of their rating powers, which have been turned over to independent inspection bureaus. About all that is left to the field organizations is police duties. In States like Illinois, for example, the two field organizations have to take up nearly every important question through joint committees. Both field organizations are working along the same lines and co-operation is absolutely necessary if much is to be accomplished. The question naturally arises, why it should be necessary to put up with the delays and misunderstandings resulting from two organizations, which could be avoided if all the field men were in one association.

One thing which makes this question the more pertinent is the fact that in Minnesota, whose field organization is acknowledged to be the best in the West, there is no question of union or non-union, stock or mutual in the State board. That organization maintained its identity and old form

while others were reorganized. It has maintained better conditions in Minnesota than are to be found in almost any other State. Naturally the field men in some of the other States see no good reason why the two organization systems should be maintained under the changed conditions.

15 PER CENT. COMMISSION ONE WAY TO CUT COST.

A Western company officer who attended the meeting in New York last week and who is familiar with the various movements now on foot in the West to reduce expenses predicts that the next few months will see more important and interesting changes in the fire insurance business of the country than has any like period in many years.

The recent letter issued by the committee of Western managers on the subject of expense has caused a large amount of thought and comment on this question. One well known manager has expressed his views, which, while in accord with the general idea of expense reduction, go further than most men seem inclined to go in that he favors going back to the old 15 per cent. flat commission basis at one fell swoop. He says the companies have gone mad on commissions, that the only way to cut off the tail of a mad dog is to cut it just behind the ears and it is cruel to the dog to do it piecemeal. He says in part:

"Get back to the oldtime standard 15 per cent. commission from which standard companies never should have departed. It is well understood that the departure from the 15 per cent. commission was merely a war measure; but since a number of the standard companies in an organized body, put their stamp of approval on the present excessive commissions paid to agents by standard companies, they have found it one of the most difficult problems to contend with

IT PAYS THE AGENT

To represent the best company. There are many excellent standard life insurance companies. Which is the best? In stability, progressiveness, liberal contracts to agents and low cost to policy-holders no company surpasses

and reform they have ever experienced in the history of fire underwriting. But now that, through agitation on the part of the public, legislative bodies and State officials, the companies are waking up to the fact that, unless they bring about promptly a reduction in the excessive commission cost of our business, the several States will enact legislation regulating this extravagant expenditure for the companies, it certainly must appeal to every thoughtful and fair-minded underwriter, as exceedingly more businesslike and dignified for companies to take immediate and heroic action on this subject themselves."

Not only is the desire to forestall legislative action a motive for endeavoring to reduce expenses, but the fact that the margin of underwriting profit is growing narrow also impels in the same direction. Along this line a company official last week called to the attention of the Illinois Field Club the advisability of making a declaration against the granting of relief rates so freely as it has been done.

From several Western States come reports that field men of large companies doing a general business are finding it almost impossible to show any advance in premiums this year. While June appears to have been a pretty good month for most companies as regards losses, the first five months of the year were so hot that profits for the first half are not up to the usual standard in many offices. This matter of high loss ratios is becoming somewhat chronic in the West, apparently due in a large degree to the constant working down of rates and loss of good business to mutuals, interinsurers and others. Unless the expense ratio can be reduced, it apparently will be but a short time when many companies will see profits disappear entirely in the West.

OVERHEAD WHISKY LINES.

The National Association of Local Fire Insurance Agents has received notice from a co-operating company that its strict compliance with the overhead writing rules of the National Association in respect to whisky lines in Kentucky has occasioned the loss of insurance on this class of risks to the company and to its local agents. In consequence, Chairman W. E. Metzger, of the executive committee, has notified co-operating companies of the complaint made that some companies on the list were not complying with the rules of the National association in regard to overhead writing. He says: "We beg, therefore, to call your attention

to the fact that it is the purpose of the National association to require that all co-operating companies shall protect their agents' territorial rights in respect to all forms of insurance, excepting steam railroad schedules."

It is understood that the National association is prepared to take drastic action in the case of any company wilfully violating the rules of the association. The following resolution on the subject was adopted at the last annual convention of the National association:

CO-OPERATING COMPANIES—
The executive committee is instructed to drop from the co-operating list any company wilfully violating the rules of this association or persistently refusing to co-operate with the association in promoting good practices; the names of said companies to be bulletined to the members of the association with the reasons for the action taken.

CASE AGAINST CROKER BEHIND CLOSED DOORS.

Underwriters need to watch critically steps in the movement designed to oust Chief Croker from command of the fire department. Behind closed doors in fire headquarters yesterday Deputy Chiefs Lally and Langford and Battalion Chief Howe, who, with Chief Croker have been investigating the Washington street fire of June 6 last, in which two men lost their lives, filed separate reports finding the chief guilty of incompetence, neglect of duty, and violation of the rules of the fire department. These separate reports later will be embodied into the majority report of the committee already planned, and Chief Croker will face charges which, if sustained, can result only in his dismissal from the department.

Chief Croker will file a minority report defending his actions at the fatal blaze. Yesterday the separate reports were read, while he was absent from the room, and he will learn their exact contents only when the final majority report is filed against him.

The Prudential's Surplus.

VICE CHANCELLOR HOWELL, sitting in Newark last Thursday and Friday heard arguments in the suit of Leon F. Blanchard and others against the Prudential for a distribution to stockholders of a part of the company's surplus. They are to be continued today and to-morrow.

The complainants were represented by John R. Hardin and Robert H. McCarter. The Prudential was represented by Richard V. Lindabury, general counsel; former United States Senator John C. Spooner and Edward D. Duffield, of the company's law department.

For the Plaintiffs.

Mr. Hardin began by saying that there was a wide difference between the capital stock of an insurance company and that of an ordinary manufacturing or trading company.

"The fund of an insurance company is its premium receipts," he said, "and until that becomes insufficient no call can be made on the stock. The capital stock of an insurance company is only a guarantee fund, to be resorted to when necessary.

"The primary fund unquestionably belongs in gross to the insurance company, and there can be no question raised as to the ownership of the fund. The surplus belongs to the company as completely as the fund in gross, unless there is a contract right to share it. The stock plan puts the ownership of the company in its stockholders, and under that plan all the gain of business belongs to the stockholders.

"The tendency of the day is against a large surplus, and the earnings should be distributed in the form of dividends to the stockholders. Any dividend that the company may earn, according to law, should be distributed among them. The directors of the company seem to have forgotten that the company is a stock company and that its stockholders have clear and well defined rights in it."

For the Company.

Senator Spooner declared in reply that the Prudential was, in its nature, a public institution and that the interests of its policyholders were directly involved in the proceedings in court.

"The court will never supplant its judgment for that of the board of directors," he said, "unless it is made clear that the action of the board of directors is tainted with fraud or is oppressive. The distinctions in law between the ordinary money-making

corporation and other corporations are nowhere more clearly drawn than in the State of New Jersey."

"In modern legislation," Mr. Spooner said, "the rights of the policyholders were conserved as much as those of the stockholders, and that the act for the protection of the deferred dividend policyholders, intended as a shield, appeared to have been turned into a sword against the policyholders. He denied that any gratuity was allowed, and he praised President Dryden for his efforts to stem the rising tide of prejudice against industrial insurance. He insisted that it was entirely within the power of the board of directors to act as it did in connection with the distribution of the surplus, saying that it was necessary, as a matter of equity to policyholders.

Mr. Lindabury discussed the reference in the complaint to the amount of cash dividends and other benefits to policyholders beyond the requirements of their contracts and the enlarging and changing of such contracts.

"The most important of these concessions was made in 1897," he said. "The company at that time changed its industrial policies into profit-sharing or participating policies. The rates on the new industrial policies were not increased above the rates on the old ones, and, in order to place the old and the new on the plane of equality, the company accorded participation to the old policies in the same manner and to the same extent as to the new. The cost of these various concessions to the company amounted, on December 31, 1909, to \$12,678,060. The claims now made that these concessions were illegal, and amounted simply to taking money out of the pockets of the stockholders and giving it to the policyholders."

The action of the directors in thus apportioning the surplus was defensible upon every principle of morals, equity and law, Mr. Lindabury said.

MERGER DEAL IS OFF.

State Auditor Barton, of the Nebraska Insurance Department, has decided to forbid the proposed consolidation of the Royal Indemnity Company and the Commonwealth (Life) Insurance Company of Omaha, Neb. The stockholders of the Royal Indemnity were not particular, anyhow, about making a sudden expansion from their original plan of having a \$100,000 institution, and as such it will begin doing business under a State li-

cense in a few days. The consent of the required two-thirds of the stockholders of the Commonwealth to effect the merger could not be obtained because many of them desired to keep to the life insurance business. So the Commonwealth will continue as a life company, with an extensive reorganization of its management.

State Auditor Barton had already indicated that he would not license the Commonwealth if he found that more than 15 per cent. of the receipts had been spent for promotion when the application was made. When it was found that this limit had been exceeded, it looked as if the company would be without a license. When the proposed merger with the Royal Indemnity fell through, the auditor gave his consent to issue a license to the company on its present financial basis, providing a reorganization could be effected.

Van B. Lady, the secretary and general manager, holds possession of his position by court injunction, but will apparently be eliminated by the purchase of his contract, which has a half year to run at \$350 a month and the liquidation of other financial obligations claimed by him against the company.

E. M. Fairfield has resigned as director and president and Sherman Saunders, already a director, is to succeed him as president; Alonzo B. Hunt has resigned as director and treasurer and A. D. Marriott, already a director, is to succeed him as treasurer.

More for Workmen, Less for Lawyers.

IN THE last session of the Illinois State Legislature provision was made for the appointment by the governor of a commission of twelve members, six of whom shall be employers of labor and six employees or representatives of employees. It is directed to investigate the subject of industrial accidents and the law of liability for injuries received in the course of employment, and the best method of providing compensation for such injuries; and to report to the governor by September 15, 1910, its conclusions, with a draft of such bill or bills as it recommends. It can report only such recommendations as are agreed upon by a majority of the employers and a majority of the employees upon the commission.

Emphasis was laid upon the subject of Edgar A. Bancroft, president of the Illinois State Bar Association, in his annual address, in the course of which he said:

The subject of "Employer's Liability," or, rather, "Workingman's Compensation and Industrial Insurance" is worthy of special consideration by the bar and the general public.

Its chief importance is not in the legal questions involved, nor yet in providing a surer recompense to injured workmen. It lies in the fact that, if a plan is found for insuring every workman against loss in industrial efficiency through the accidents of his employment, it will not only end the personal injury disputes and relieve the courts of a very large burden, but it will also preserve the independence of the men and their families and avoid the wasteful anti-social influence of such strifes.

For the efficiency of modern machinery is not more wonderful than the increasing efficiency of the workmen who operate the machines. And both are capable of indefinite enlargement if proper regard is paid to the character and the welfare of the workmen. Without any additional physical labor or mental strain, the quality and quantity of their work may be increased by their good feeling toward their employer, and their interest in the success of the enterprise. Therefore, many manufacturers are joining sympathetically in the discussion of a uniform law which will, in some fair and complete manner, insure all employees against accidents occurring while on duty.

As pointed out by Prof. Mechem's very instructive address of last year—the employer's present liability for the acts of his servant within the scope of his duty has strictly no ethical or logical basis, but was engrafted upon the law. Of like origin are the counterpart rules as to "fellow servant," "assumed risk" and "contributory negligence." To the proposal to abolish these defenses it is natural for the employer and the employer's lawyer to object that this

is taking one man's property for the benefit of another.

So far, the principal legislation in America is the Federal law as to interstate railroads—making the carrier the insurer of the safety of its employees while on duty against injuries from all causes except their own wilful acts.

Methods Used Abroad.

In Germany the whole matter is handled by a department of the Government, which operates a plan of compulsory industrial insurance. Every employer must insure with the government all his regular employees whose annual wage is less than \$500. Each employee is enrolled in a "Trade Assembly" embracing all workmen in that class of work, and his employer pays into the fund of such particular "Trade Assembly" a certain per cent. of the total average annual wages of such employees—the payment varying according to the hazards of the occupation. When an accident occurs, the government's insurance department takes charge of the man, provides surgical attention and hospital service, and pays certain monthly sums so long as his disability continues. If he dies, it provides for his funeral and gives a certain pension to the members of his family dependent upon him. Employees who receive \$500 or more a year, or who are employed temporarily or outside any specified class, are insured only at their option and by making a monthly contribution from their wages. The employer is not required to make any provision for them, but has only his legal liability, if any, to meet in case of accident. Against this he can protect himself, as the employer often does in this country, by insuring in a private liability insurance company.

The Government insurance department, in dealing with insured employees, has a fixed scale of compensation quite similar to that of the accident insurance companies of this country. Each permanent disability has its fixed compensation, being a certain specified per cent. of the workman's average wages. In case of death, his family receive an amount equal to his average wages for a certain period, as two or three years.

Of course, the per cent. varies according to the occupation. The loss of the left hand, for example, is relatively a smaller disability for a clerk than for a workman.

In Russia the law casts the burden for all injuries to employees while on duty, except those due to the fault of the employee himself, directly upon the employer. And it gives to such employee—or, in case of his death, to his dependent relatives—a lien on the factory for the payment of damages

that have been or may be recovered, and for the payment of any pension which may be fixed by a judgment of the court with the consent of the plaintiff or agreed upon between the parties.

The English employer's liability act, like the Russian, provides for a change in the rule of liability, rather than for a scheme of industrial insurance—which takes and keeps the subject of compensation for accidents out of the courts.

Automatic Insurance.

The difference between these two methods of dealing with the subject is important. The lawyer is apt to fix his attention upon the legal questions, and the discussion of changes in the rules of liability tends in the same direction. But this, it seems to me, misses the essential point in the problem; which is to secure to the employee industrial insurance that will be automatic and free from wasteful expense; that will require not attorneys, nor court contests with their uncertainties and delays, but will give to the employee a fair and a fixed recompense according to his disability, and save the employer from the costs of litigation, and make the loss to the employer precisely equal to the benefit to the employee.

Therefore, the discussion should not center upon constitutional questions, or the changes in the law of liability or grounds of defense. But upon a plan, to be fairly worked out by competent and disinterested men, which will bring such a saving to the employer of time and annoyance and the expenses of litigation as will recompense him for waiving the question of his constitutional rights, and will bring such a similar benefit to the employee—specific and certain compensation for each injury—that he can well afford to waive the advantage which he may occasionally have in the unlimited damages which a jury may award.

Under the present rules of the employer's liability in this State, the cost of accidents to a manufacturing business of average hazards is from 3-5 to 4-5 of one per cent. of the annual payroll; that is, if an employer has 1,000 men and an annual payroll of \$400,000, it now costs him for accidents on the average from \$2,400 to \$3,200 per annum. That amount represents:

(a) What is paid to employees in settlement or after judgment. Of this, on the average, one-half is taken for attorney's fees, lost time preparing for and during trial, and actual expenses;

(b) The attorney's fees and expenses and loss of time on the part of the employer, which represents an amount equal to from 50 to 75 per cent. of the total payments made.

Employees Get a Fraction.

Therefore, the employer is paying to-day three or four times as much on account of personal injuries as his employees themselves receive. Each is damaged by the annoyance, the hostile feelings and the interference with his regular business which litigation threatened or pending, always entails, with the further and indirect damage to each from the unfriendliness of the other. In addition to all this, society is suffering the

expenses of litigation and the injury of disturbed relations between employer and employee.

Both employer and employee would be gainers, measured merely in dollars, from a method under which one would pay and the other would receive a reasonable amount in every case of injury, which both would know in advance and which would be paid and received without strife, or litigation. Such is the only solution really worth while; and it is worthy the best thought and effort of the members of our profession, as well as of employers and employees.

In Russia, the courts, without a statute on the subject, have adopted the German plan of a governmental to be obtained of the actual pecuniary damage from the particular injury; so that, when a workman brings an action for the loss of a hand, the master's liability having been determined, the court fixes the amount by reference to the German schedule, giving him such per cent. of his annual wage as is assigned by the German law to such a disability to a man in such employment. But this leaves two questions to be litigated: (1) Whether the injury was caused by the employee himself; and (2) the present value of such per cent. of his average wages for the period of his probable disability. The court cannot, without the plaintiff's consent, enter a judgment for monthly payments. Therefore, it is only a partial solution. It is to the interest of society that the disability payment, like the earnings before disability, should be monthly, to avoid the hazard of loss or misuse of the money paid.

Therefore, unless we are to adopt the German plan of a governmental department of insurance—which presents many serious difficulties—an adequate law, instead of forbidding arrangements between employer and employee to effect this end, should encourage and legalize any plan which provided definite and fair compensation for all classes of injuries at least equal to a schedule of minimum payments which the law should fix. Instead of remitting the parties, as our law at present does, to the uncertainties and delays of litigation, it should so limit the possible advantages of strife to either party that it would be to the mutual interest of both to agree.

The Illinois Commission.

The recent act for the appointment of a commission to study this question, in providing that six of its members shall be employers and six shall be employees or their representatives, illustrates the present partial view of the problem. It treats it as a question affecting only two groups of society—employers and employees. The great body of society which supports the courts and is injured by trade strifes, and which ought to be impartial, is not represented. It is to be hoped that the importance of the subject will so impress itself upon the commissioners that they will have no thought of obtaining, in their conferences, particular advantages for the side which they represent, but will be anxious to study both sides with impartiality and will act with independence in following their conclusions. It is not a subject for trading or

compromise; it must be dealt with in a large, broad, public-spirited way, with society's interest, as well as that of the immediate parties, always in view.

EMPLOYERS LIABILITY

RATES MAY GO UP.

At a meeting yesterday afternoon, which was attended by some twenty liability insurance companies, for the purpose of discussing the new employers' liability laws, that go into effect in this State on September 1. a committee of five liability insurance attorneys was appointed for the purpose of forecasting the probable court interpretations of the laws, that liability insurance underwriters might have some basis on which to make rates. Another committee was appointed for the purpose of suggesting forms of indorsements and insuring clauses for policies to make the present policy forms conform to the new laws. Another committee of five underwriters was appointed for the purpose of suggesting policy forms and indorsements to be used in this State in the general business of liability insurance after September 1.

It was apparently the consensus of opinion that it would be necessary to very materially increase employers' liability premium rates in this State to cover the increased liability of all employers of labor.

KINGSBURY GOES WITH THE U. S. CASUALTY.

Edson S. Lott, president of the United States Casualty Company, has appointed F. H. Kingsbury executive superintendent of the company with headquarters in the home office.

Mr. Kingsbury, consequently, has resigned as secretary of the Pennsylvania Casualty Company, of which he was one of the organizers. He has been the underwriter of the Pennsylvania Casualty since it began business—about a dozen years ago. He will give particular attention to the liability department of the United States Casualty. His insurance experience commenced with the American Mutual Indemnity Company, of Scranton, in 1898.

Upon the organization of the Pennsylvania Casualty he assumed control of all its business except the agency department, giving particular attention to underwriting propositions. For several years past he has paid special attention to the liability business and the financial affairs of that company. He served two years on the executive committee of the Liability Insurance Association, he has served one year on the executive committee of the Board of Casualty and Surety Underwriters, and he is at the present time the board's secretary and a member of the executive committee.

ENTERPRISE CASUALTY TAKEN TO COURT.

Judge Holland, in the United States Circuit Court on Tuesday, issued a temporary injunction restraining the officers and stockholders of the Enterprise Casualty Company from holding a meeting at noon of that day and also from disposing of any of the assets until a hearing to-morrow. The meeting was to consider a proposal to increase the capital stock of the company from \$100,000 to \$1,000,000.

At a meeting late Tuesday afternoon, at which more than a hundred stockholders were present, it was voted to wind up the affairs of the concern, and James D. Kelly, Winthrop Smith and W. E. Bernard were appointed a committee for that purpose.

The complainants in the injunction case were T. Coleman Dupont, Alexis I. Dupont, W. Windor Laird, H. I. Brown and E. G. Buckner, all of Wilmington.

In the bill of complaint upon which the petition for the injunction was based the complainants declare that they purchased from one hundred to five hundred shares each of the stocks of the insurance company under various representations regarding the

concern, which they now allege were false.

They aver that officers of the concern represented the Enterprise Casualty Company as being duly authorized by law to execute contracts of insurance; that the capital stock of the company was \$1,000,000, with a reserve fund of \$500,000; that at the time the stock was purchased by the complainants, between February and May of this year, there had been more than \$800,000 received in bona fide subscriptions for stock, and \$1,000,000 in policies already subscribed. That also a number of prominent Philadelphians were members of the board of directors.

All these representations the complainants declare to be false. They charge that while the concern was incorporated under the laws of Pennsylvania on April 14, 1909, with a capital stock of \$100,000, they were not granted the right to execute insurance policies until April 14 of this year.

They also assert that with the exception of F. T. Chanler, Arthur L. Wheeler, Paul B. Vrooman and H. E. Clark, who were elected to the board of directors last month, none of the other men named were either directors or stockholders of the company.

In asking that the meeting be prevented to-day the complainants charge that the officers of the company had withheld their stock certificates in order to deprive them of the right to participate in the election and other matters affecting the policy.

It is also charged in the bill of complaints that L. V. Gilliam, a former treasurer of the company, was \$23,000 short in his accounts. The other officers of the company are charged with wasting the funds of the company through improper and unlawful expenditures. For this reason the court is asked to appoint a receiver to take over the books and assets of the concern and make an accounting.

To Expiate His Crime.

Napoleon J. Rivet, of Lowell, Mass., is sentenced to die in the electric chair during the week beginning Sunday, July 24, for murdering Joseph J. Gailoux in February, 1908. The facts brought out at the trial showed that the murderer and his victim were friends. Fourteen months before the killing, Rivet, who was then working as an insurance solicitor, took out a policy of \$1,000 on the life of Gailoux. Rivet was the beneficiary of this policy, and he paid the first and second premiums thereon, which had become due at the time of death.

Q—Quarterly.

The Phenix Report.

IN THE matter of the examination of the Phenix Insurance Company of Brooklyn, the examiners have now filed their formal report with Superintendent Hotchkiss of the New York State Insurance Department. "It is expected," says a statement by the department, "that the facts developed by the report as to the falsity of the company's statements will be brought to the attention of the district attorney of New York county."

The report, among other things, criticizes the large collateral loans made by the company to former State Superintendent of Insurance Pierce and certain deputies and examiners then connected with the department. Although all of these loans were ultimately paid, the examiners are of the opinion that they were made in violation of the insurance law. In connection with the report the State Insurance Department issued a statement, in which it said:

It will be recalled that, following discoveries of gross irregularities in the management of this company, President George P. Sheldon was summarily removed from office last December, and, on facts presented to the district attorney, indicted for grand larceny. Mr. Sheldon died before such indictment could be pressed. Shortly thereafter the Phenix company was emerged with the Fidelity Fire Insurance Company, and the combined companies are now known as the Fidelity-Phenix Fire Insurance Company and doing an active business.

The examination just completed covers the transactions of the Phenix Insurance Company since the last previous examination, which was of the statement of June 30, 1887. It has been particularly searching, however, as to the recent years of the company's existence. From such examination, the examiners conclude that the surplus of the company on December 31, 1906, was actually but 286,477, though reported as \$1,626,477; that though reported for 1907 as \$849,461, such surplus not only did not exist, but the capital was impaired to the extent of \$372,429; and, similarly, that though the company on December 31, 1908, claimed a surplus of \$1,010,453, its capital was actually impaired to the extent of \$126,167, a difference of \$1,136,620.

The present examination was made as of September 30, 1909, and the examiners find at that time a surplus above capital of \$421,200, instead of \$1,546,648, as claimed by the company in its quarterly statement as of that date.

The difficulties of the company seem to be mainly traceable to two causes: First, the purchase by President Sheldon early in his administration of large blocks of the securities of the Council Bluffs Water Works Company, nearly half of whose stock and bond issues seem to be owned by

the Phenix Insurance Company; and, second, an apparent general want of supervision or examination by the State Insurance Department during a period upwards of 20 years.

For the bonds and stock of the Council Bluffs Water Works Company the Phenix paid approximately \$557,000, and such holdings—the water works company now being in the hands of a receiver—are and for some time have been of problematical value, they being carried in the examiners' statement at \$112,400. These securities have for many years passed in and out of the books of the Phenix at the time of its annual statements, such books being manipulated and other securities purchased and devious means devised; all to the end that their actual ownership by the insurance company would be concealed from the department. The last of these transactions was in January, 1909, when coincident with the deposit by the insurance company of \$250,000 in the Carnegie Trust Company and \$225,000 in the Empire Trust Company, the Council Bluffs and a small amount of other securities were transferred to the Carnegie Trust Company for \$494,400, President Sheldon, as it is claimed by the trust company, agreeing for the insurance company that he would repurchase such securities at the above price plus a commission of 1 per cent. ninety days after date. This agreement was renewed, and these securities were held by the Carnegie Trust Company at the time of the examination and the disclosures which followed, it claiming also that the deposits made with it and the Empire Trust Company were as collateral to such agreement. The matter is now in litigation. But the examiners significantly point to the fact that one Robert Sewall, for some time president of the Council Bluffs Water Company, is probably identical with the Robert Sewall who, prior to Mr. Sheldon's election as president of this company, was a member of the firm of Sewall, Pierce & Sheldon—the Pierce of such firm shortly thereafter becoming superintendent of insurance of New York. They also state that Mr. Sheldon for many years was the treasurer of the water works company.

Not only was the purchase by the insurance company of the water works company securities largely responsible for the juggling of the books and for repeated false annual statements, but many others of the criticized transactions of the president of the company seem to be traceable to such purchase.

It is already well known that the Phenix Insurance Company, not only through the administration of Mr. Pierce, from 1891 to 1897, but until the recent examination, practically received no attention from the insurance department. Also, that during such period large collateral loans were made by such company to Superintendent Pierce and certain deputies and examiners then connected with the department. The report brings out the fact that all of these loans were ultimately paid; though, as it

states, even granting that the credit of \$15,000 for counsel fees allowed Mr. Pierce after he retired is valid, the small amount of interest paid by him on his loan really resulted in a loss of upwards of \$15,000 to the company. They also note the fact that, not only during but after Mr. Pierce's incumbency, his loan was paid up and taken on again every six months when department statements were due, so that it never appeared thereon.

The examiners also suggest that these transactions were in violation of section 7 of the insurance law, which then, as now, prohibited any gift or credit, on any pretense whatever, from a company subject to examination to the superintendent of any clerk or employee of the Insurance Department. Stress is also laid upon the numerous false statements made by the officers of the company; it appearing that all the statements for the past decade or more have been knowingly false. It is expected that the facts developed by the report as to the falsity of the company's statements will be brought to the attention of the district attorney of New York County.

Among the new matters brought out by the report are:

That all dividends declared since at least the losses incident to the San Francisco conflagration have been so declared upon erroneous figures; a condition of impairment rather than of surplus having existed during most of this time.

A deception to the extent of about \$1,000,000 practiced upon the department by the company in stating its losses at San Francisco.

The carrying of a special account in connection with such losses, that the department—and even the directors of the company—might be deceived.

The purchase of the company's stock with its own funds, and a number of peculiar and questionable transactions at the Chicago agency, particularly in connection with the sub-agency at San Francisco, which resulted in the ultimate falsification of the books and seemingly a considerable loss to the company.

A number of other matters worthy

THE PRUDENTIAL
Insurance Company of America.

Incorporated as a Stock Company by the State of New Jersey.

JOHN F. DRYDEN,
President.

Home Office,
NEWARK, N. J.

of comment are also brought out. Among them being large collateral loans made to President Sheldon, in violation of law; investments of a questionable character made by him and acquiesced in by his finance committee, among them a purchase of the bonds and stock of the Sheldon Marble Company, which resulted in a loss of \$26,000, and as to which and other similar loans the examiners state: "The president either had a special interest, aside from the company he represented, or was distinctly negligent in not exercising proper care"; as well as certain transactions with Fisk & Robinson and Carter, Wilder & Co., both in connection with the manipulation of the insurance company's assets and also with the personal deals of Mr. Sheldon, some of which resulted in the indictment of the latter.

The report indicates that Vice-President Ingraham and Secretary Koster, as well as the latter's predecessor, Secretary Wright, now deceased, were for years fully cognizant of the transactions of President Sheldon, yet, aside from protests from time to time, did not inform the directors of the company of what was going on; but, instead continued to draw their comfortable salaries.

Further, the report emphasizes the statement frequently made that directors of corporations too often do not direct. It says: "The testimony taken at such examinations clearly indicates that the Phenix Insurance Company was a one-man concern, directed in its policy by its president, and whose directors, other officers and general agents were under his complete domination. Even though the officers failed to properly advise the board of the continuing irregularities, such fact can to no extent be considered a valid excuse for the non-performance of the duties of such board as expressed in the charter. It would appear that the directors took full advantage of the provision of section 13 of the amended charter, in delegating to committees and to the president power to transact much of the most important business of the company. This wholesale delegation of power, without proper supervision or subsequent examination of the manner in which the duties of the president and the various committees were performed, operated to the detriment of the company. If proper supervision and examination had been exercised the condition of the company and the irregular practices would not have gone unnoticed for so long a period of time.

The names of the directors of the company during the whole period covered by the examination are set out in the report; the directors for 1909 being George P. Sheldon, W. J. Logan, John Cartledge, George M. Hard, George Ingraham, E. C. Converse, F. J. Logan, B. J. Greenhut and Charles F. Koster.

The report also refers to the activities of President Sheldon in promoting and retarding legislation, particularly through his agent, William H. Buckley, whose correspondence with Mr. Sheldon furnished the basis for the recent investigation conducted by the insurance department.

THE SUN'S SOUVENIR.

As a souvenir of the bi-centenary of the Sun Insurance Office of London, a handsomely gotten up edition of "The Early Days of the Sun Fire Office," by Edward Baumer, late manager and secretary, has been issued by the home office of the company. The work, which was written for the occasion, is gotten up partly in old style typography, and contains much of the official record of the formation of the company. The volume, which is bound in white and gold, is liberally illustrated with cuts of ancient fire engines, primitive fire policies, early Sun marks, street maps of London, a facsimile of the head of a policy dated 1726 (printed from the original plate), and two full page illustrations in color, one of them being a picture of the Sun float on the River Thames, and taken from an old water color drawing.

The Sun in the year of its organization, 1710, "employed in the service of the Office thirty lusty able-bodied firemen who are cloth'd in blue livery and having silver badges with the Sun marked upon their arms, and twenty able porters likewise who were always ready to assist in quenching fires and removing goods, having given bonds for their fidelity."

This statement is but an example of the picture which the volume draws of some of the conditions of life prevailing in London two hundred years ago.

NEW BRITISH LEGISLATION.

John L. Griffiths, United States Consul General in London, has made a report to the State Department at Washington regarding legislation in Great Britain affecting the commercial and financial world enacted during the past year, in the course of which he says:

The assurance companies act was the most vital law passed in reference to public companies. It is both a consolidating and amending statute. It extends to all insurance companies provisions of former acts which theretofore applied to life insurance companies only, such as, for example, the requirement that new insurance companies shall make a deposit of \$7,333 with the paymaster general. The greater portion of the act did not come into operation until July 1, 1910. One section, which took effect from the date of the passage of the act, December 3, 1909, relates to collecting societies and industrial assurance companies. It validates policies insuring funeral expenses of parent, grand-parent, child, brother, or sister. It also legalizes policies taken out on the life of another in whose life the insurer had no apparent interest, provided the policy was effected by or on account of a person who had at the time a bona fide expecta-

tion that he would incur expense in connection with the death or funeral of the insured, and if the sum assured is not unreasonable for the purpose of covering these expenses.

The "Insurance Directory and Business Chart of Baltimore City, Washington D. C., and the States of Maryland, Delaware and West Virginia, for 1910," published by Jas. M. McClellan, of the "Baltimore Underwriter," is just out.

LEADING FIRE COMPANY OF THE WORLD

NOTEWORTHY ADVANCE.

The

BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

- Low premium rates.
- Large surrender values.
- Dividends at the end of each policy year.
- Thirty-one days of grace in payment of all premiums after the first year.
- Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.
- Loans for the full cash surrender value.

Policy payable in one sum or in instalments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

LIFE COMPANY RECORDS.

Benjamin F. Brown, the Boston life insurance accountant and statistician, has issued his twenty-third annual compilation, "The Essential Statistics, Business, Financial and Economical, of Twenty-eight Representative Life Companies," made up from the official statements to the New York and Connecticut insurance departments.

In a ten-year view of the experience of twenty-five companies Mr. Brown says:

In the matter of lapses it is shown that a rate as high as 4.59 per cent. no later than 1906 had dropped last year to a mean of 1.92. This percentage, it is safe to say, has never before been approximated in an equal aggregation of companies, that of the year before, 2.27 per cent., being in all probability the next lowest. Doubtless with equal certainty the same may be said of total discontinuances with a percentage of 5.39, in which connection, moreover, the effect of increasing surrenders of maturing tontines in succeeding years of an extended period must be taken into account. It is also worth noting that the drop of 0.64 in percentage as compared with that of the preceding year (6.03) represents a decrease of \$52,537,000 in terminations other than by death and maturity, meaning just that sum of additional gain to insurance in force independently of increase in new issues.

The largest individual company gains from new business (gross) were, in amount, \$68,322,500 (57.7 per cent.), \$32,932,500 (55.2 per cent.), \$25,094,900 (41.5 per cent.), and \$18,028,900 (58.8 per cent.), all profiting in some measure, as the table shows, by decrease in lapses.

An interesting feature of the exhibit, introduced for purposes of comparison, is the showing of terminations coming under the general head of "Waste" in 1894. Doubtless the impression is more or less general, even among the well informed, that the waste record in certain years of the last decade is without parallel since the '70s. Let us see about this.

In that year of high record the percentage of lapse was 7.61 (nearly four times that of 1909, you will observe). Had an equal percentage obtained in 1906 as related to outstanding business to the amount of \$8,914,819,000, the lapse total would have figured as \$678,417,730 instead of \$409,627,572. Like application of the full waste percentage, 12.02, gives a total of \$1,071,561,200 as against \$703,741,900, the actual figure, and by scores of millions the highest of the decade. So it is that results in that far-away year make the totals and percentages of the worst years of the decade seem favorable by comparison; while those of 1909 are made to look like the proverbial 30 cents. Let us then be thankful for the much that has been gained, as against which, viewed as an earnest of the future, even the heavy temporary loss of a few past years should weigh but lightly.

Gross Expenses.

For the first time since 1904 it can be announced that the official returns

of twenty-five companies transacting ordinary business only show an increase in expenses. Ordinarily such announcement would be regarded in some quarters with disfavor, as indicating at least a partial return to past methods. As a matter of fact the showing is distinctly meritorious and consistent with true economy, as evidenced by unusually large returns in the line of value received. Close upon \$4,000,000 in amount as compared with the preceding year, the increase represents, first, initial expenses on an additional \$93,000,000 original issues; second, material improvement (at last) in quality of business, as indicated by increase of \$1.40 in mean premium unit (involving, of course, in many instances higher grade commissions); and, finally, as already made to appear, a larger gain of insurance relatively to amount issued than has been ever before recorded. To which let it be added that this measure of all-round improvement was accomplished with an increase of but 0.82 in ratio of expenses to premiums, the equivalent of 22 cents per thousand of insurance in force; from which, incidentally, you will observe how much less formidable the above-noted millions of increase appears when reduced to percentages and measured by results.

Now, a word in conclusion as to last year's relative gain from new business, to which I have referred above as "distancing" all previous records. The best relative results of record as regards the ratio of gain to volume were attained in 1902, in which year of the high-pressure period '97-'05 results in this respect had reached their culminating point. This story of that year as compared with 1909 is given concrete expression in the following tabulations, the first giving the actual ratios; the second, as based upon equal new business volume with pro rata changes in gain from new business and expense ratios:—

Ratio of volume (new business per \$1,000 of old)...	\$176 v. 97
Gain per \$1,000 new business	530 v. 286
Expenses per \$1,000 insurance in force.....	9.98 v. 6.77

Ratio of volume, equalized basis	100 v. 100
Pro rata gain per \$1,000 new business	173 v. 289
Pro rata expense per \$1,000 insurance in force.....	8.90 v. 6.81

PROMOTIONS IN GEORGIA.

Georgia expects to contribute to the underwriting world two new insurance companies. One of these companies will be known as the Andrew Jackson Insurance Company of Athens, Ga. Its chief organizer is J. A. Darwin, widely known as a life insurance man, and associated with him is E. R. Raile, who is expected to be general manager. The capital stock of the company is \$5,000,000, divided into 50,000 shares of \$100 each. In addition to life insurance the charter, which the company is asking for, will provide for writing accident, health, liability and casualty insurance. It is

planned to begin business early in the fall.

The other company, for which \$1,000,000 capital is proposed, will be called the Cosmopolitan Life Insurance Company and is being promoted by the Cosmopolitan Agency Company, of which Joel F. Armistead is president. It is planned to sell the stock of the Cosmopolitan Life at a sufficient premium to provide for organization expenses and a surplus of \$250,000. A considerable part of the stock has been subscribed already. The company will operate on a legal reserve basis and proposes to devote itself to Southern and Western States particularly.

The Preferred

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

MOTOR CAR INSURANCE.

In view of the great increase of effort to write automobile insurance, underwriters may be interested in a prospectus just issued by the British General Insurance Company, Limited, for owners of private motor cars. The "Policyholder" of Manchester, England, describes the prospectus as follows:

The British General's "extensive" policies include the following benefits: (1) Unlimited indemnity in respect of claims by the public for injuries to persons or animals, or damage to property anywhere in the United Kingdom; (2) indemnity up to the full value of the car (including tires, lamps and accessories) against accidental damage anywhere in the United Kingdom, including damage during transit by road, rail or inland waterway; (3) insurance up to full value of the car, etc., against loss or damage by fire, lightning, explosion, or self-ignition anywhere in the United Kingdom; and (4) insurance up to full value of car against theft (loss or damage) anywhere in the United Kingdom. The premiums required to secure these benefits appear to be quite moderate, and, of course, vary according to the value of the car and the horse power. Thus, in the case of a car value £400, of 16 horse power, the premium is £13 10s; for a car value £1,000 of 20 horse power, the premium is £18 10s. Liberal arrangements are made to cheapen the cost of the insurance where possible; renewal premiums are reduced by 15 per cent. if no claim has been made during the year, and special allowances are made of 5 per cent. off premium if car is solely driven by one person, 20 per cent. if assured bears first five pounds of each claim, and 25 per cent. if assured bears first ten pounds of each claim.

The prospectus also gives the terms for policies covering individual risks, and we observe that for third party insurances, where the indemnity is unlimited, reductions also of 20 per cent. and 25 per cent. are made if assured bears first £5 or £10 of each claim. This concession applies likewise to insurance against accidental damage to the car.

THE AUTO POLICY.

At the last meeting of the Association of Licensed Automobile Manufacturers, there was a general discussion of words that had crept into the automobile business which, in the opinion of many, were unfair to the trade as a whole, and of special interest to the companies issuing auto policies. Such expression as "pleasure car," for a machine to carry passengers, was considered pretty poor nomenclature.

The term "commercial cars" as applied to freight-carrying automobiles, was declared a misuse of the term from the fact that all automobiles are commercial and practicable.

The general opinion seemed to be that in future automobiles should be

termed "passenger automobiles" and "freight automobiles," just as the railroads term their equipment "freight cars" and "passenger cars."

In the "Glens Falls Now and Then," appears the following:

The insurance commissioner of Colorado frankly says:

The receipts of this department from license fees and taxes are nearly ten times the cost of operating the department. In view of the fact that this excess is a tax upon thrift, the savings of the insuring public coming almost directly from the pockets of the policyholders, it seems only just and fair that it should be reduced.

The revenues from the State Insurance departments in most States show a rapid increase due to the larger aggregate of insurance premiums. The sums of money over and above the department expense add very materially to the State revenue. The tax, however, falls on the policyholder. He contributes in this way to the expenses of the State, while those not policyholders share in the benefits.

The insurance companies are paying far more than their just share to the various States toward the expense fund.

Philadelphia insurance men will be the gainers by a decision of the Philadelphia Rapid Transit Company. The properties of the company are widely scattered and for several years it has been carrying its own insurance, the fund of which now amounts to about \$1,750,000. This money has now been transferred to the cash drawer and the company has arranged to place about \$18,000,000 of insurance with local agencies. Five brokerage firms, Henry W. Brown & Co., Billington, Hutchinson & Co., Creth

& Sullivan, Simon Wolf and Marx L. Mayer & Co., are arranging a schedule for placing the line. The average rate will be 40 cents per \$100, making the annual premium about \$72,000. The brokerage commission is 15 per cent.

HYGIENIC PRINCIPLES OF VENTILATION.

Dr. W. A. Evans, the bacteriologist, who became the head of the Chicago Board of Health two years ago and who a few months ago wrote an article on the conservation of life and health, which appeared in "The Chronicle," has prepared an article on the hygienic principles of ventilation, in which he says:

I deal especially with the sanitary side of ventilation. Good air is the most important problem before health departments. Sewage engineering has made good. It has saved thousands of lives and added to the sum total of human happiness. It has approached the subject in a comprehensive way, from the health standpoint, as well as the engineering and mechanical. Sewage disposal, both in and out of the house, is causing less than 400 deaths a year in this city of 2,250,000 people.

This is not true of ventilating engineering, and it will not be so long as lung diseases are responsible for one-third the total deaths. In round figures Chicago loses 10,000 people a year from these diseases. Man consumes solid food, liquid food, or water and gaseous food-air.

Ten thousand deaths a year from bad meat or bad milk or bad water would produce a world-wide scandal, yet we accept 10,000 deaths from bad air with complacency, and a landlord, a manufacturer, a storekeeper, or a head of a house will have an easy conscience if he can think that he did not kill any more than his share. Of course, that conscience should not allow him to sleep until he takes no human life by bad air through any sin of omission or commission.

Dr. Evans then goes into this estimate of the basic hygienic principles of ventilation in a way that makes highly valuable advertising for the conservation advocates:

Attention must be concentrated on the breathing zones of the habitually occupied portions of the room. This, in the average room, means a space of from four feet above the floor level to six and a half feet above it.

In this zone there must be the greatest possible effort to prevent stagnation and dilution.

Dead zones and corner eddies afford fertile settling places for bacteria.

In them there is the smallest possible air movement. Such places should be cleaned daily; therefore, they must be readily accessible for cleaning purposes. Such zones must be unoccupied, e. g., a working desk is placed therein, conducting ducts with air inlets must be made to open into them. Ventilation of such crannies by dilution is a myth. The breathing zone must be occupied by an even up current of air moving at the rate of at least sixty feet a minute from multiple floor inlets to multiple ceiling outlets. If the natural upward flow is met by a down flow of air the expired air is buttressed right in the head zone and does its maximum harm.

The ventilating air in mechanical

systems should never enter a room at more than 40 degrees below body temperature; 30 degrees below is better still. Where men are working hard a high temperature, say, 70 degrees, is required on account of the chilling of perspiration. Where men are very still and sluggish a room temperature of 68 to 70 degrees is required. Where men are mildly active 60 to 65 is better.

The air must be protected from dust—both the introduction of dust from the outside and the dissemination of dust produced inside. It is of great importance that the relative humidity of the inside air should not be materially greater than that of the outside air. It is of some importance that it should not be more than 10 degrees less than the outside air.

The volume of air per quiet person per hour should be around 500 cubic feet, varying with the directness of removal of the polluted air. The arrangement of the ventilation must be such that the windows can be opened and the room blown out at least once in each twenty-four hours. Recirculation of air is not to be tolerated. The air must be below six parts per 10,000 in carbonic acid gas, and low in dust and bacterial content.

The statement that a new contract has been, or is about to be, let for the reconstruction of the fire alarm telegraph in this city is gratifying to underwriters, who have waited long and patiently for this event. As an emphasis to the open charge, of which proof has been offered, that the main cause of the death of two firemen in the Washington street warehouse fire was the failure of the signal telegraph to give the alarm promptly, the new contract is opportune.

Frederic B. Withington, consulting actuary of Des Moines, Iowa, has concluded a contract with the Western States Life Insurance Company of San Francisco, Cal., to act as resident actuary for that company and will shortly start for the Coast. Mr. Withington has arranged to fulfil his existing contracts with his clients, however, and will, for the present, maintain his office in Des Moines,

which will be in charge of an assistant until his successor has been decided upon.

Four insurance companies, one fire and three life, have filed applications with the California State Insurance Department for licenses to do business in that State. They are the Merchants Fire Insurance Company of Denver, the Columbia Life and Trust Company of Portland, Ore., the Scranton Life Insurance Company of Pennsylvania and the Missouri State Life Insurance Company of St. Louis.

J. P. MORGAN THINKING OF THEODORE ROOSEVELT?

By way of Denver and with credit to David H. Moffatt, the banker and railroad man, comes the rumor that J. P. Morgan is thinking about Theodore Roosevelt in connection with the Equitable trusteeship held by the late Grover Cleveland.

FOR MEDICAL INFORMATION.

An exchange bureau for medical information will be in working order for the American Life Convention on or before July 15, according to a decision of the executive committee in Indianapolis within the week. Then the American Life Convention will drop its membership in the insurance Exchange. This step was taken as a consequence of the factional disturbances existing for some time past in the exchange which have kept some of the companies belonging to the convention from being admitted, in spite of resolutions passed at the last annual meeting of the convention. One of the important changes contemplated in this service is that impairment cards will be distributed by States, so that members can make selection and pay only for such cards as they want for States in which they are doing business. By the methods of the exchange it was necessary to subscribe to the entire service.

The new bureau will be known as the medical section of the convention. Dr. Armand Ravold, medical director of the Missouri State Life, was elected chairman, and Dr. F. L. B. Jenney, medical director of the Federal Life, was made secretary. These gentlemen, with Dr. James H. Stowell, of the United States Annuity and Life, Dr. Whitfield Harold of the Southwestern Life and Dr. H. M. Woolen of the American Central constitute the board of managers.

Forty-five companies united in the request for organization of this bureau and fifty companies are already pledged to membership. Ten companies not now in the convention have indicated their desire to join the convention upon condition that the bureau is organized.

It is probable that the cards will be cleared through the office of Secretary Thomas W. Blackburn of the American Life Convention, who has severed all his company connections.

The Court of Appeals of New York has affirmed the decision in the case of the New York Board of Fire Underwriters vs. Higgins & Cox et al. The result of the litigation is that all companies writing marine and (or) floating policies covering automobiles

are required to furnish statements of the premiums received for insuring automobiles and such part of the premiums on other marine policies as represents the fire insurance on such property while in the fire patrol district, and establishes the right of the board to tax such business for the support of the fire patrol as provided for in the charter of the board.

On July 1 Henry W. Gennerich assumed the duties of agency vice-president of the Cleveland Life Insurance Company. At the age of 31 he entered the banking business, and became president of the United National Bank of New York City, that had a capital of \$1,000,000 and a surplus of \$250,000, most of which he secured. Subsequently he turned to life insurance, and from 1903 to 1906 he was with one of the big companies in New York. During the period he paid for more than \$4,000,000 of business, with an aggregate premium of \$220,000.

Edward Rapallo, special master appointed by the United States Circuit Court to pass on the claims against the Mutual Reserve Life, the receivership of which is about to be vacated, filed his report on July 1. The report of William Hepburn Russell and Chas. E. Rushmore, receivers, filed on June 29, showed assets to the amount of \$647,445.26. In addition there remains \$9,954.35 from what is known as the "special premium account."

The publication of a limited edition of net premiums and values based

upon the British Offices Life Tables, 1893, at 3 per cent. and 3½ per cent., has been announced by the "Monetary Times" of Toronto. The authors are Thomas Bradshaw, F. I. A., F. A. S., and G. Cecil Moore, A. I. A., A. A. S.

Bardoe's Column.

ENRY W. EATON, president of the Fire Underwriters Association, has appointed the following executive committee: F. O. Affeld, manager Hamburg-Bremen Fire Insurance Company; Geo. W. Babb, manager Northern Assurance Company of London; R. M. Bissell, vice-president Hartford Fire Insurance Company; M. O. Brown, vice-president Westchester Fire Insurance Company; J. D. Browne, president Connecticut Fire Insurance Company; E. H. A. Correa, vice-president Home Insurance Company; A. E. Duncan, president Franklin Fire Insurance Company; C. W. Gerwig, secretary Teutonia Insurance Company, Allegheny; Geo. C. Howe, vice-president Niagara Fire Insurance Company; A. E. Larter, vice-president American Insurance Company of Newark, N. J.; E. Milligan, vice-president Phoenix Insurance Company of Hartford; John O. Platt, vice-president Insurance Company of North America; F. W. Sargeant, president New Hampshire Fire Insurance Company; E. W. West; A. H. Wray, manager Commercial Union and Palatine Fire Insurance companies.

The executive committee is to decide when the rules of the new association are to become operative and besides has the very broad powers necessary in view of the large field covered. The Northern Insurance Company of New York has withdrawn its signature from the association agreement.

E. E. Hall has been appointed general agent of the State Insurance Company of Nebraska, outside the Metropolitan district.

John J. Martin, formerly superintendent of agencies of the Liverpool and London and Globe Insurance

Company, died at Stamford, N. Y., on Saturday. He retired December 31, 1907, under a pension after having been in the service.

Suggestions for guidance in the preparation of combination fire insurance policies under the law that took effect on July 1 have been issued by the New York Insurance Department.

John H. Stoddart, general agent of the New York Underwriters Agency, is passing his summer in Europe.

H. E. Ziegler, recently with the Norwich Union Fire, is now on the staff of examiners in the general agency of E. E. Hall & Co.

Henry Evans, president of the Continental Fire Insurance Company, arrived yesterday on the Oceanic, after his annual automobile tour through Southern France, Spain, Italy, Switzerland and Germany. Mr. Evans did not use a railway train during the trip, his machine having met him on the pier at Cherbourg. During Mr. Evans' absence Vice-President Geo. E. Kline was at the head of the Continental interests.

Ralph K. Hubbard, for many years comptroller of the Provident Savings Life Assurance Society, has been elected vice-president of the Great Northern Life Insurance Company, of Wausau, Wis. Frank K. Kohler, formerly general agent in New York for the John Hancock, also goes to the Great Northern as superintendent of agents.

Six new assistant examiners were announced at the State Insurance Department yesterday. They are Arthur E. Peat and Charles A. Kirschgessner of Brooklyn, Ernest Willvonseder of Westchester, John H. Kirker, Jr., and Joseph H. Middleton of Albany.

Forborne Immediate Annuities.
Curtate Summations of D Column.
Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
Divide temporary insurance values by immediate temporary annuities.
Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.
Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
Warranted Commissions for New Business.
Surrender Values.
Dividends.
For these purposes the "select and ultimate" will be most useful.

TO SAFEGUARD COTTON BILLS.

Surety Men, Bankers, Railroad Officials and Commission Merchants Hard at Work on the Solution.

LONDON, July 13.—The bankers' committee recently appointed to inquire into the cotton trade situation has decided to propose that, commencing in November, American cotton bills of lading shall be negotiated only when they are guaranteed by an American banking institution. It is expected that the proposal will be adopted after consideration at a general meeting of English and Continental bankers.

The committee made its investigation as a result of the discovery at Liverpool last April of irregularities in the bills of lading on American cotton.

Joel Rathbone, vice-president of the National Surety Company, said yesterday afternoon:

"The committee representing surety companies that went South to investigate the matter of cotton bills of lading, of which I was a member, returned and made its report in regard to a guarantee against forged bills. As another form of guarantee is now wanted—namely, that the railroad has received the cotton—the whole matter went back to the committee to consider an amended guarantee. The committee will meet tomorrow morning, and they expect, before long, to have their plan in proper and efficient shape. The original intention was for a joint guarantee by the companies which were looking the matter up. As practically all the twenty-two or so companies in the surety association will probably act in harmony, it will probably have to

be by reinsurance, as twenty-two signatures are too many for a joint guarantee."

Cortlandt S. Van Rensselaer, of the American Surety Company, had this to say:

"The surety companies are endeavoring to work out a method by which they can safely and profitably make such guarantees as the bankers want. It is probable that something definite will be decided upon within the next week. As yet no decision has been made. Some representatives of the leading banks and some officials of the railroads chiefly affected, have gotten together in regard to the better safeguarding of bills of lading. By the time that they have worked out that problem, it is believed that the surety companies will have decided what sort of a guarantee they can offer, and at what rate."

At a meeting held in the Corn Exchange Bank on Tuesday five of the leading banks in this city which handled cotton bills and seven railroads which haul a great deal of cotton were represented. The railroads were the Rock Island, the Illinois Central, the Southern Railway, the Louisville & Nashville, the Atlantic Coast Line, the Seaboard Air Line and the Central Railway of Georgia. The meeting was devoted to a discussion which developed complete harmony regarding the need of additional safeguards.

Another conference will be held at White Sulphur Springs, Virginia, next Tuesday, where the traffic managers of the Southeastern lines, which handle the bulk of the cotton crop, are holding a convention. The New York

bankers will send a sub-committee of three members to attend the Virginia conference.

The Railroad Side.

Perhaps the best statement of the side of the railroads is contained in an interview given by Robert Walker, general counsel of the Chicago, Rock Island & Pacific Railway Company, in reply to those who insist that the responsibility for bills of lading should always be with the railroads whether the goods they represent have been shipped or not.

Mr. Walker said:

The United States Supreme Court, in the Friedlander case, decided that there was no justice in shifting the burden upon the railroad in the case of worthless bills of lading there before the court. It is necessary to make discriminations. Concededly, where a railroad is so reckless as to put into the hands of shippers signed bills of lading in large quantities the railroad ought to answer, without squealing, for any consequences resulting therefrom. But where an honest, experienced station agent, who has known a particular shipper for years and has never known him to fail to perform a promise, lets the shipper have a complete bill of lading on the shipper's solemn promise to load the goods within two days, obviously it is a sharp injustice to wish to hold the railroad liable for the value of the goods if it happens that this shipper, for the first time in his life, fails to load the goods. It is plainly the shipper's default, not the railroad's. Between these two instances there are all the possible gradations of fault on the part of one party or the other, shipper or railroad.

New York City forgets that the farmer is a busy man in shipping season, and often has to make a long trip to his railroad and his bank at a season when he can ill afford to spare the

time. He wants to make as few such trips as possible. So the railroad and the bank (never forget that his local bank does some trusting also, and could easily make inquiry of the railroad if it doubted the bills of lading) help him out, and he goes back home to hustle along his loading. And the farmer does not fail to load as agreed in one case in 10,000.

You must not be misled by the volume, in dollars, of the cotton business. We have other big crops. And take it from the viewpoint of railroad tonnage. Cotton is only four-tenths of 1 per cent. of the tonnage loaded into American railroad cars. Congress didn't hear a peep from the other 96 6-10 per cent. of our tonnage. "Order" bills of lading, which are the only kind that ever get into these scrapes, are fewer than 2 per cent. of the bills of lading issued by our railroads. And order bills of lading, on which credit is extended of the sort that the cotton merchants and banks are worrying about, constitute about 3 per cent. of that 2 per cent. So this whole rumpus is about four-tenths of 1 per cent. of our tonnage and six one-thousandths of our bills of lading.

If the bankers and cotton merchants will limit their demands to methods of facilitating their business, and I know this is all they mean to do, the railroads will assist gladly. It won't need a statute. If they will ponder this matter a little, they will see that they will be hampered by a statute.

A committee of foreign bankers, interested in cotton bills of lading, is expected to arrive here from Europe some time during the present month. So soon as they appear they will hold a conference in this city with American bankers and several large cotton shippers, in order to discuss the guarantee plan, and it is believed that foreign approval will be obtained at this or succeeding conferences for the plan now under consideration by the combination of surety companies. The undertaking also has the support of banks dealing in foreign exchange in Chicago, St. Louis and New Orleans, as well as in this city.

Bankers and Brokers Talk.

The views of some of the cotton commission merchants are also pertinent.

Henry Hentz, of H. Hentz & Company, had the following to say in regard to the failure of the United States Senate to pass the Stevens bill, putting the responsibility of the integrity of bills of lading upon the railroads issuing the bills:

The difficulty of negotiating exchange on bills of lading, occasioned by the Knight-Yancey frauds is just as acute as ever here. The New York banks and bankers, so far as the export business is concerned, must follow whatever instructions they receive from the European banks who issue the credits, hence if something practical is not arranged before the time arrives to move the next crop it may seriously interfere with the move-

ment. It is unfortunate that the Stevens bill, which passed the House, did not get to the Senate before it adjourned on Saturday last. This bill is a very desirable one, as it makes the railway companies liable for the acts of their agents (of course, it does not cover the forgeries). The Senate probably will take up the Stevens bill early in December.

H. Norden, of A. Norden & Company, spoke as follows:

We gave up the raw cotton export business some time ago, and one of the reasons for it was the loose system of issuing through bills of lading which has been in vogue down South. Fortunately for us, we never suffered any losses, but we were always in fear of something going wrong. It is no surprise that the foreign bankers have announced their determination not to accept such bills of lading during the next season. A law making railroads responsible is absolutely necessary, and it is to be hoped that the Stevens bill will be passed at the next session of Congress. In the meantime it will be necessary to exercise great caution and much discretion in the acceptance of bills of lading. I believe that a large number of the foreigners will be willing to accept bills from large houses known to them, and that in the end the whole matter will be settled satisfactorily, perhaps even without the guarantee of the surety companies.

Oscar L. Gubeiman, of the banking house of Knauth, Nachod & Kuhne, was skeptical in regard to the surety company plan. He said:

The difficulty of negotiating exchange on bills of lading, following the Knight, Yancey and Steele Miller frauds will have the effect of concentrating the cotton business down in the South in much stronger hands. The man who heretofore operated a large business with a small capital will find it very difficult to negotiate exchange.

I think that hereafter banks in this city will send representatives to the principal cotton centres down South for the purpose of investigating the firms for which they do business. They will also demand signed statements showing the financial standing of the houses, and will negotiate bills of lading only of firms of unquestionable character.

Philip J. Kraft, of the foreign department of the banking firm of Hallgarten & Company, declared that hereafter foreign houses would refuse to accept bills of lading unless they were guaranteed in some way that the documents were genuine, and that the cotton was actually shipped. He added that the plan of the surety companies for taking the risk would be satisfactory, provided they made a reasonable charge for the guarantee.

George Brennecke, until recently president of the New York Cotton Exchange, asserted that serious complications would soon arise to the detriment of the financial and mercantile interests of the community unless American bills of lading could be

made satisfactory to foreign bankers. Mr. Brennecke continued:

When I appeared before the Congressional Committee and spoke in favor of the Stevens bill, I expressed the opinion that if the Government failed to pass a law governing bills of lading, a panic would overtake the country next year. Congress chose to adjourn without taking any action—and there you are.

In London last week at the meeting of the International Law Association, Thomas Baty, LL.D., of London, declared that the reason why insurance companies had been admitted to membership in the association was that their interest in a just solution of questions of prize law and through bills of lading is undeniable.

"And," he added, "the high standing of Lloyds and other British insurance companies makes them bodies which are eminently entitled to make their voices heard in the councils of jurists and merchants."

PRESIDENT TAFT AND THE WORKMEN'S INQUIRY

President Taft has invited W. C. Brown, president of the New York Central Lines, and Daniel L. Case, editor of the Brotherhood of Railways Trainmen's Journal, to serve as members of the commission which was authorized by Congress to investigate the subjects of employers' liability and workmen's compensation. Senator Warner, of Missouri; Senator Hughes, of Colorado; Representative Denby, of Michigan, and Representative Brankley, of Georgia, are also members of the commission, which, it is hoped, will be able to make its recommendations to Congress at the next session.

G. F. SEWARD WOULD SAFEGUARD EMPLOYERS.

George F. Seward, president of the Fidelity and Casualty Company, has written as follows to "The Chronicle" in regard to the Federal inquiry as to workmen's compensation:

"I am an absolute well-wisher for compensation laws, but have great fear that they will not always be just to employers. What is granted reasonably will be taken later perhaps as a mere beginning, and claims for broader laws urged with irresistible force under our system, which makes legislators regardless of the wishes of men who hold votes in overwhelming numbers."

Reinhold R. Koch, president of the American Assurance Company of Philadelphia, has been elected president of the Atlantic Casualty Company of Philadelphia.

CONGRESS AND THE EMPLOYE PROBLEM.

Written for THE CHRONICLE.

By SYLVESTER C. DUNHAM,
President Travelers Insurance Company of Hartford.

IF IT were within the authority of Congress to enact a measure somewhat like the Workmen's Compensation Act of England, I have no doubt that the benefits to society would be very large.

I believe some benefit would be derived from an act providing a suitable scale of compensation for such industries as may be made the subject of legislation by Congress, which would be limited, I suppose, to those engaged in interstate commerce. Such a law ought to have a helpful influence upon the States in favor of similar legislation for the vastly greater number of workingmen whose interests cannot be provided for by Federal legislation.

I have long believed in the principle that industrial injuries suffered by employes on the course of their employment should be regarded as an element in the expense of the operation and I have advocated this doctrine for many years.

It has come to be generally recognized in the last twelve or fifteen years, and particularly during the last five years, that the present method is obsolete and that it does not apply equitably to modern industrial conditions. Much injustice is done to both employers and employes under a method which makes a personal controversy and a possible lawsuit of nearly every injury. This injustice is illustrated by the well-known fact that in many cases of serious disablement and indeed fatal injuries no recovery can be had while in other cases of less gravity excessive verdicts are obtained.

Probably ninety per cent. of all the employes in the country work for corporations and the sense of personal obligation that once existed between master and men has largely disappeared. The relation of employer and employe is far more mercenary than it was when things were done upon a more moderate scale and each felt a personal interest in the welfare of the other.

It has become necessary to substitute a legal obligation for a moral obligation and while the English solution of the problem is far from satisfactory, it is based upon the well-founded principle that the industry should furnish compensation for all injuries suffered in the course of its prosecution.

A material factor in such a system is a scale of compensation reasonable for both parties. Such a measure would prevent the waste incurred under the present methods for which the law and not the insurance companies is responsible.

It must be admitted that it is now necessary for employers and those representing them to spend a large amount of money in resisting claims for which the law does not now provide. A radical change in the law is the only way to convert this waste into a fund that will be helpful to injured persons. Such a law ought also to go far to heal the estrangement between employers and employes. Compensation for occupational injuries could then be furnished without excessive expense or undue delay and the employer would have no unfounded claims to contest and no extortionate verdicts to satisfy.

A proper system should be worked out with the utmost care and with the benefit of the best experience and advice obtainable. A proper commission appointed by Congress could act with judgment and deliberation, the result of which ought to be a well considered, systematical and complete measure, which if followed by the States would prevent further errors of haste and inexperience such as we have recently witnessed in Ohio and New York.

LEGISLATIVE COMMITTEE FORMALLY ORGANIZES.

With the election of Assemblyman Edwin A. Merritt, Jr., as chairman and senator, Alexander Brough as vice-chairman, and ex-Justice M. Linn Bruce, of the New York Supreme Court as counsel, the legislative committee appointed to investigate graft charges in the Legislature and the State departments was formally organized at the Murray Hill hotel. The first meeting of the committee will be held on July 26, and the hearings may not begin for another week.

"I do not care to start on this work with any preliminary flourish of trumpets," said Chairman Merritt. The work of the committee will have to speak for itself. We have come down here to do precisely what the Legislature by its concurrent resolution instructed us to do."

Mr. Bruce expects to confer with Governor Hughes and with Superintendent Hotchkiss, of the State Insurance Department, in regard to the work.

"When I was first asked to become counsel of this committee," said Mr. Bruce yesterday, "I sent word that I was willing to undertake the work provided my views of the purpose, scope and methods of investigation were in accord with those of the committee. Among other things I said that I favored an immediate, impartial, thorough and unsparing investigation in conformity with the terms of the concurrent resolution under which the committee acts and which confers its powers.

"Since the committee has seen fit to select me as its counsel, I am assured that the committee's views and mine are in accord. It will take some time to select associate counsel and other necessary assistants to the committee, and also some time to gather data and arrange it in shape to begin the public hearings, but as soon as

this has been done the hearings will start.

"I shall avail myself of the very first opportunity, in company with Chairman Merritt, to confer with Governor Hughes and also with State Superintendent of Insurance Hotchkiss. The Governor is a master investigator. No one is better able and more willing, I believe, than he to give valuable suggestions."

GAYNOR TAKES CHARGE OF THE CROKER CASE.

Mayor Gaynor has taken charge of the fire department investigation into the fatal Washington street fire of June 6, which was being used by opponents of Chief Croker in the fire department. Fire underwriters derived considerable satisfaction from a statement made by the Mayor, in which he asserted that there was no suggestion of removing Chief Croker.

"I doubt if there will be any charges against him," said the Mayor. "Commissioner Waldo has not made any. He is regarded as a good fireman. But there must be an administrative head of the fire department, and only one, and there will be, while I am Mayor. Chief Croker invited the present inquiry by criticising the firemen at the Washington street fire, and the commissioner would have been very remiss had he not ordered the investigation."

Commissioner Waldo has received the minority report of Chief Croker as a member of the Washington street fire inquiry committee. The Chief refrains in his report from answering the strictures which his fellow-committeemen made upon him. The Chief gives a formal record of the proceedings of the committee, draws no conclusions, and calls attention to the Commissioner's inquiry order to show that any criticism or recommendation is unjustified.

The Commissioner has ordered the

investigating board to reconvene at fire headquarters to-day, despite the fact that the work was apparently finished. The Commissioner declined last night to talk about the order to reconvene.

GUARANTEE CO. OF N. A. PAYS \$25,000 CLAIM.

The Guarantee Company of North America has paid \$25,000 to Robert Lyon, receiver of the Allegheny National Bank of Pittsburg. The order was made by Judge Charles P. Orr of the United States Circuit Court. The Guarantee Company of North America issued a blanket bond for the total of \$55,000—\$20,000 on William Montgomery and \$15,000, \$10,000 and two \$5,000 bonds on the men in the bank working with Montgomery. The losses aggregated \$496,000, and Montgomery is now in the Federal prison at Ft. Leavenworth, Kan. The receiver sued for \$55,000, alleging that the other men in the bank assisted Montgomery in his fraudulent transactions. The Guarantee Company contended that Montgomery alone caused the loss. The majority of the board of directors of the bank approved the settlement.

INSURANCE IN FORCE
FIFTY MILLION DOLLARS

Dr. Leslie D. Ward Dead in London

LONDON, July 13.—Dr. Leslie Dodd Ward of Newark, N. J., first vice-president of the Prudential Life Insurance Company, died at 7:15 o'clock this evening after a week's illness. Kidney trouble was the cause of death. With Dr. Ward when the end came were his son, Leslie Perry Ward, and Frank Munsey, the publisher.

Dr. Ward's illness came on suddenly. While he had suffered from headache before leaving New York, physicians there had found no sign of kidney disease. Directly after his arrival in Europe he was much entertained socially both in London and Paris.

While attending a performance at a theater he was overcome with drowsiness and had to be assisted to his carriage. It was found that a blood clot had formed on the brain. Although Dr. Ward showed great resisting power, which led to hopes for his recovery, the development of pneumonia sapped his remaining strength, and he had been unconscious since Saturday.

The body will be shipped to New York for interment on Saturday by the Campania. A memorial service has been arranged for to-morrow in London.

Dr. Leslie Dodd Ward was born in Madison, N. J., on July 1, 1845. His family was among the first settlers of Connecticut, and subsequently emigrated to New Jersey, where they founded the city of Newark in 1666. An ancestor, Josiah Ward, married Elizabeth, daughter of Captain Samuel Swain, one of the pioneers of New Jersey.

Dr. Ward was educated at the Newark Academy but left school to enlist in an unattached company to go to the Civil War. He was sent home, before he reached the front, and returned to the academy. He went off again, just as he should have graduated, to join the Thirty-seventh Regiment of New Jersey Volunteers.

After the war he entered the College of Physicians and Surgeons, receiving his degree in 1868. He practiced medicine in Newark, taking high rank in his profession and acting as county physician of Essex County for many years. In 1874 he

THERE WERE GIANTS IN THOSE DAYS.

The sudden and, until within a few days, unexpected death of Dr. Leslie G. Ward, vice-president of the Prudential Insurance Company, of Newark, removes one of those remarkable, far-sighted, indomitable men who formed the group which has brought that great idea of John F. Dryden through from the weakness of infancy to the greatness of full maturity. There were indeed giants in those days. From a puny, struggling "friendly society," an exotic, by many, yes, by most deemed "un-American," and not suited to our conditions, to the life insurance company which last year issued a larger volume of protection upon lives than was ever before written by any company in a single year, is a tremendous march to be compassed in a lifetime.

This, though he is thus stricken down, who was but yesterday in vigorous health, Dr. Ward lived to do and to see. May his lifelong associate and friend, President Dryden, whose conceptions, labors and achievements he so nobly seconded, long be spared to continue the work and behold its glorious results!

MILES M. DAWSON.

helped John F. Dryden found the Prudential Life Insurance Company, of which he was medical director. He was elected first vice-president of the company in 1884, and was in charge of both the home office and the field force.

Dr. Ward was also director of the

Fidelity Trust Company, the Union National Bank of Newark, the National Surety Company of this city, the Public Service Corporation of New Jersey, and the American Steel and Wire Company. He belonged to the Union League, the Lawyers', the Essex, the Morristown, and the Morristown Golf Clubs, and was president of the Essex County Country Club. He was for many years staff surgeon of the Essex Troop, the crack cavalry squadron of New Jersey.

A Republican in politics, Dr. Ward was a delegate to the National Convention at Philadelphia in 1900, which nominated McKinley, and was a member of the committee which notified President McKinley, and the college of electors which elected him. He was a delegate to the National Convention at Chicago in 1904 and was again placed on the notification committee.

Dr. Ward was well known for his knowledge and interest in art. He was president of the commission in charge of the \$2,000,000 Essex County Court House in Newark, which was completed about four years ago. The elaborate decorations of both the interior and exterior were chiefly the result of his suggestion and work. He had made valuable collections of rare pictures for his home in Newark and his country estate at Brooklake Farms, near Madison, N. J., and his libraries contain thousands of valuable volumes.

On March 5, 1874, Dr. Ward married Miss Minnie Perry, daughter of James Perry of Newark. She died several years ago. One son, Herbert Edgar Ward, also died several years ago, leaving a daughter. Another son, Leslie Perry Ward, survives him.

CHICAGO'S OLDEST AND STRONGEST COMPANY

Robert D. Lay, Secretary, 159 La Salle Street, Chicago.

Doings and Sayings in Chicago.

SEVERAL new casualty companies are reported as about to enter Chicago soon, but up to the present time they do not seem to have completed satisfactory arrangements. Officers of the Pacific Coast Casualty were in the city several weeks ago, arranging for a transfer of its general agency to another office and the opening of a surety branch. The proposed office is a fire insurance agency and none of the men presented as possible managers of the company's business seemed to meet all the requirements.

The Prudential Casualty of Indianapolis has made overtures to several men in Chicago, but so far is not known to have closed with anybody. The Commercial Casualty of Newark has been in correspondence with Chicago parties and it was understood a representative of the company would visit the city before this, but nothing has been seen of him. The Southwestern Surety was also corresponding with a prospective general agent, but the negotiations are reported to have been dropped.

Meanwhile the established offices in the city go on much as usual. The automobile liability conference is working satisfactorily, although three companies are outside—the American Fidelity, Casualty Company of America and Philadelphia Casualty. The American Fidelity has done a large automobile business in the city for several years and the others are doing a good volume also, according to reports.

The plate glass compact is not effective yet, as the Empire State Surety and the Great Eastern Casualty have refused to join up to the present time.

Several surety offices report gains in volume of business for the first

half of this year over the same portion of last, but the gains on the whole are not what were expected. There is a general feeling that business conditions are not right.

* * *

Whatever George H. Holt of Chicago may think of the action of the executive committee of the Chicago Association of Commerce in denying responsibility for what Mr. Holt said before the Illinois Fire Insurance Commission, fire insurance men in the Windy City are in a happy frame of mind about it. At the request of the commission the Association of Commerce sent a committee to attend one of the hearings. Mr. Holt as a member of that committee voiced his individual views, which were exceedingly offensive to the fire insurance managers and the impression got abroad that he was speaking officially for the association. Some of the managers who are members of the association protested and the action of the executive committee was the result.

Mr. Holt has given much more grata to the fire insurance people. He is a man of large means and much energy. What his business is it would be hard to say, because he has so many businesses. He is a lumberman, vice-president of the Columbian National Life Insurance Company, owner of the Manhattan building in Chicago, prominent in the Building Managers Association, head of the Chicago High Pressure Commission, president of the Policyholders Union, is engaged in the equipment of risks with sprinklers making his profits out of handling the insurance and paying for the equipment out of the difference between the old and new rates. He is a general critic of fire

insurance. His attitude in this regard is attributed by some to his inability to get as low rates as he wants on his various equipped risks. Not only has he been active in Illinois, but especial offense has been taken at his going to Indiana to help the attorney-general of that State in his anti-trust prosecutions.

Mr. Holt has given much more study to fire insurance than have most men not actually engaged in the business and "much learning has made him mad" at the companies for the way they conduct their business. He has some good ideas, and, like others who view fire insurance from the outside, some theories which the men who really run the business think very poorly of. If he were an insignificant person in the business world, he would be regarded very much as a mosquito is, but his prominence, influence and activity put him more in the position of the proverbial bull in the china shop, capable of causing much trouble.

* * *

The committee of Western managers which recently addressed a letter on the expense question to the companies recognizes that it has a large job ahead of it. It was not for want of earnest efforts on its part that a similar committee in 1906 failed to do anything in the way of reducing expenses in Chicago. That attempt failed while the companies were still adjusting San Francisco losses and the need of saving money on expenses as perhaps they had never done before.

Undoubtedly most of the companies now are in favor of reducing the large city expenses. There may even be unanimity on this general proposition, but the rub will come when the work-

A GREAT SIX MONTHS

We closed the first half of 1910 with a rousing increase in new business over our record for the first half of highly prosperous 1909.

In policies and dividends we have what the public wants. In literature and canvassing aids we have what the agent wants. And back of all is a reputation gained from 59 years of activity as a Massachusetts Company.

If you are a genuine producer, a *delivering* producer, and wish to join our forces, address

GEORGE D. LANG,

Superintendent of Agencies

Massachusetts Mutual Life Insurance Company,

Springfield, Mass.

Incorporated 1851

ing out of the details of how it is to be done begins. Take Chicago as an example. There are about two hundred fire insurance companies represented in the city. They are represented under all sorts of arrangements. A comparatively few are on the sole agency basis with local agents. A very few have salaried managers and no downtown local agents. More have salaried managers and one or more local agents also and the vast majority have a number of local agents each. The commission contract with all its companies—40 some being on a graded scale and others flat. Many of the agents have a contingent commission agreement. One office is said to have the same contract with all its companies—40 per cent. flat and 10 per cent. contingent—but this office does mostly a preferred business, and it probably gets no more on that class than many others.

The agents, in turn, have all sorts of arrangements. Some of them are large personal producers and buy comparatively little from brokers. Others buy most of their business from brokers. Others employ solicitors, compensated in whole or in part by salary. Some of the agents are but little different than brokers; they have the first agency of some minor company in which they place but little business and second or third agencies of other companies, in some of which they can place business only after receiving permission from the manager or first agent. By being agents, however, they can secure higher commissions than brokers receive.

Then there are some three thousand brokers—some of them high-grade men, who understand the business, some of them solicitors of small risks, mostly in the foreign sections of the city in which they reside, some of them connected with real estate and

mortgage loan agencies which could not be brokers under board rules.

Will Pinch Somebody.

It is evident that any readjustment of expenses is going to pinch somebody, and the class that stands the loss will do all it can to block the movement. In the Eastern movement the commission scale for the broker is taken as the basis and an overriding commission is proposed for writing the policies and handling the business. In the West, however, the tendency in the past has been to take the agent's commission as a basis and work down from that to the broker's commission. Here is where perhaps the greatest difficulty comes in. The companies maintaining salaried city offices are dependent almost entirely upon the brokers for business and are not inclined to starve the geese that lay their golden eggs. A commission scale for brokers, however, which is satisfactory to them was unsatisfactory to the local agents the last time reduction of expenses was tried and some of the agents were influential enough to keep their companies from agreeing to the proposed scale. But the local agents are not a unit in wanting brokers' commissions reduced. They want just as large facilities for carrying downtown business as possible. To get there they must have preferred and outside business also, in order to help out their classification and distribution. They must depend largely upon brokers to furnish them this business, as they have not the time to solicit it themselves, and they do not want the broker starved out of the game, as they need him.

Another question which the agents raise is that of solicitors. The board rules fix the rates of brokerage, but there is nothing to prevent an agent or a salaried manager from hiring a

good broker on a salary basis and paying him more than he could earn as a broker. The agents contend that unless the compensation of solicitors is covered by the agreement that may be made the companies with salaried offices will hire the best of the brokers as solicitors at prices which the agents cannot pay and make any money on the transaction.

It was evident at the hearings before the Illinois Fire Insurance Commission and from the expressions of Commissioner Hartigan, of Minnesota, and others that the opinion is held by these men on the outside who are investigating the expense question that some of the middlemen should be gotten rid of, as they add to the cost which the public has to pay. But the question arises, who is the middleman? Is he the broker who stands between the agent and the assured, but actually solicits the business, or is he the agent who stands between the broker and the company? The weeding out of perhaps two-thirds of the so-called brokers might be a benefit to the business, but how about the well-equipped men who really handle the insurance of their customers, working out forms, devising legiti-

A PENN MUTUAL PREMIUM, less a PENN MUTUAL DIVIDEND, purchasing a PENN MUTUAL POLICY, containing PENN MUTUAL VALUES, make an INSURANCE PROPOSITION which in the sum of ALL ITS BENEFITS is unsurpassed for net low cost and care of interests of all members.

AGENTS WANTED FOR UNOCCUPIED TERRITORY

mate means for reducing the rate and in every way giving the service for which the assured pays, except the writing of the policies and the reporting them to the companies? So, too, there are agents who could be spared, who get a commission on the business the broker produces for doing little except writing the policies or placing the lines, but how about the agents who maintain fully equipped offices, employ inspectors and do practically all the work a good broker ought to do except the soliciting?

The expense in the large cities has to be reduced and in the operation the fittest probably will survive. After the struggle is over will it be found that the agents are still on deck or that the American agency system is not adapted to the large cities and has been superseded by branch offices and brokers after the English plan?

"IN THE FRONT OFFICE."

"In the Front Office" is the title of a publication just issued by the Rough Notes Company of Indianapolis, concerning things that affect the bank balance. The volume, which is unique in both matter and form, contains plans and suggestions for writing more fire insurance, schemes for making the office more productive at less cost, and effective means of advertising the fire insurance business. It undertakes to differentiate between "The House Built on the Sand" and "The House Built on a Rock." An automatic card system for following up each detail of business and a loose-leaf system for keeping expiration records are described. Rules have been set forth for the analysis of business day by day, according to the cost per unit method of big business successes. An effort is made to show how one department may be used to help another until the transaction becomes an endless chain. The volume also contains a well classified mass of miscellaneous suggestions for keeping a big business up on its toes.

WHAT THE DUTCHESS SAYS TO ITS OWN.

A circular letter has been issued by the president and directors of the Dutchess Fire Insurance Company of Poughkeepsie to the agents and policyholders of the company, in the course of which they say:

We will therefore first call your attention to the fact that in the disagreement which we have with the Insurance Department, no question of solvency, or that we have a very considerable surplus over and above all liability of every nature, is raised by the department or by any other source. Further, we are not only doing business as hitherto, but intend to continue so to do.

As to our president, who has been connected with this company and its predecessors for forty-three years past, after the most searching, even inquisitorial, examination by the Insurance Department, we remain clear and firm in our belief that there is not even a shadow cast upon his reputation, which remains, in the judgment of both the stockholders and the directors, absolutely unblemished and above reproach. Our board of directors is largely composed of leading residents of this city, among whom four are bank presidents, two are vice-presidents of banks, two are prominent members of the Dutchess County bar, one, Mr. William W. Smith, the well-known philanthropist, and other gentlemen of like high standing, and the directors, after full consideration of every criticism which has been made upon our president, have absolutely refused even to consider the question of his retirement, and their action was emphatically and practically unanimously indorsed at a subsequent meeting of the stockholders. The criticisms referred to, so far as they have consequence at all, concern matters regarding the closing of the affairs of the old company, and these questions will be passed upon by the court in an action which has been brought for winding up the old company's affairs. So far as such questions concern us, the representatives of the new company, we as law abiding citizens, with full confidence in the wisdom and integrity of the court, are content to abide the action of the

court, and we do not intend to submit to dictation on these questions from any other source whatsoever.

BIG MEXICAN CONTRACT FOR NATIONAL SURETY.

The National Surety Company of New York, through Robert M. Nugent, its representative in Mexico City, has entered into a contract with the Federal Government of Mexico for bonding employes of the post-office, Federal telegraph and general government departments. The contract took effect on July 1, and provides for bonding several thousand men.

MEXICAN MARKET FOR FIRE ESCAPES.

Arnold Shanklin, United States Consul General at Mexico City, writes that there is an unusual opportunity in Mexico for the sale of fire escapes. These would especially be useful in case of earthquakes, as fires are quite rare because of the construction of buildings. About twenty years ago there was not a building in the Mexican capital more than three stories high, but now there are a number of four, five and six story buildings, and not one with a fire escape.

ASSET GUARANTEE STOCKS FOR BANKS?

United States Treasury Department officials are disposed to question the practicability of the plan to start a company in Washington for the purpose of guaranteeing the assets of banks against appreciation or loss. There seems to be a serious obstacle in the case of national institutions. The projected company was designed to issue policies to the banks which at the same time were to buy stock in the concern and thereby to share in the dividends earned by insuring the deposits. In the case of National banks, it has been suggested that the stock of such a company might be held by the directors, but this would give the directors a chance to profit from the operations of the concern. Should the profits be large, the situation might not look nice.

HERE AND THERE.

As a result of the Continental Life and International Fire receiverships, Commissioner Blake, of the Missouri Insurance Department, is planning for the introduction in the next session of the Legislature of a bill to give the department control over insurance corporations during the period of formation.

The Louisiana bill, providing for the State Rating Commission, has been passed by the Senate with an amendment, taking away from the companies the privilege of nominating one of the commissioners, and in this form has been signed by the Governor. It is believed that the Governor will, however, respect the original intention of the bill, so that the companies will not be entirely without a voice.

Samuel B. Brewster has been appointed by the New Amsterdam Casualty Company as its manager for New Jersey and Eastern Pennsylvania for all departments. Mr. Brewster was formerly vice-president of the Aetna Indemnity Company, and more recently executive special for the Empire State Surety Company, which latter position he resigned to go with the New Amsterdam Casualty. Mr. Brewster will have a local agency at Newark for general insurance.

A pamphlet entitled "Directions for Living and Sleeping in the Open Air" has been issued by the Metropolitan Life Insurance Company to its policyholders, giving practical directions for

home treatment, which, if conscientiously followed under the guidance of a physician, may result in cure or improvement. The pamphlet was prepared by Thomas Spees Carrington, M.D., assistant secretary of the National Association for the Study and Prevention of Tuberculosis, in charge of its bureau of construction and an appointed expert on hospital construction in the New York State Department of Health. The booklet is profusely illustrated in a very practical manner, showing the way to construct window tents, tenement house roof tents, cheap porches and sleeping bags made up with bed clothes.

Colonel Paul M. Nippert of San Francisco, head of the Paul M. Nippert Company, general agents for the Aetna Indemnity Company, has resigned from the Surety Underwriters Association of California. Colonel Nippert's action was taken after due consideration and his action was therefore not a surprise to the association membership. Failure on the part of the organization to discipline members for violation of the association rules is said to have prompted Colonel Nippert to tender his resignation. The present action grows out of the trouble which started at San Francisco a couple of months ago between representatives of the Pacific Coast Casualty and Pacific Surety companies and which for a time threatened to precipitate a surety rate war.

The New Jersey Plate Glass Insurance Company of Newark has finished its plans to extend its operations to personal accident and health policies, and fidelity bonds, in addition to its present burglary and plate glass lines. The New Jersey insurance department has approved the increase of the company's capital to \$300,000, and the necessary amendment to the charter of the company.

Concert at Deutscher Club, Deutscher Club Orchestra. Admission by association badge.

WORKMEN'S INDEMNITY IN GREAT BRITAIN.

London, July 1.—In the Parliamentary papers, Haydn Jones asks the home secretary whether he is aware that, on account of the number of accidents in slate quarries, six of the leading insurance companies decline to insure the quarry owners

against liability under the Workmen's Compensation Act, and whether, under the circumstances on which the insurance companies' decisions are based, he will represent to the Royal Commission on Mines the desirability of an immediate investigation into the working of open quarries.

Mr. Churchill replies that he has no information to the effect that insurance companies have declined to insure the owners of slate quarries against their liability under the Workmen's Compensation Act. It is reported to him that both the Dinorwic and Penrbyn quarries, two of the largest in North Wales, are insured.

INDEMNITY JUNKET.

Ferdinand C. Schwedtmann, chairman of the committee on industrial indemnity insurance of the National Association of Manufacturers, and James A. Emery, general counsel of the National Council for Industrial Defense, sailed for Europe to-day by authority of the National Association of Manufacturers to study means of preventing accidents and the general subject of industrial indemnity. The investigation is to be extended over a period of three or four months in Germany, Austria, France, England, Switzerland, Italy and Norway.

DRAFTING FRATERNAL BILL.

Commissioner Folk of Tennessee, Superintendent Lemer of Ohio, and Charles E. Piper, former president of the National Fraternal Congress, are engaged in re-drafting the tentative bill for regulating fraternal insurance organizations. They will submit the bill to the National Fraternal Congress at its annual convention in Detroit on August 16, and to the Associated Fraternities of America in Atlantic City on August 27.

Commissioner Folk, in a short statement issued at Nashville last week, said:

While there is no cause for any uneasiness or alarm, it is a sound proposition that such institutions should be upon a foundation sufficient to insure their perpetuity. The problems confronting the fraternal system are fully recognized by the leaders, and most of them are ready to lend a co-operating hand to the efforts of the commissioners.

It is an incontrovertible proposition that every society should fully and promptly meet all benefits promised by it, and in order to do so its rates of contribution per member must be upon a basis sufficient to guarantee this, and it is also incontrovertible that rates of contribution should be so adjusted that each member will contribute to his society in accordance with the risk which the society assumes for him.

WEBB McNALL DEAD.

Webb McNall, whose title to fame was obtained by his attitude toward Eastern insurance capital during his term as superintendent of the Kansas Insurance Department in 1897 and 1898, died at his home in Gaylord, Kan., on June 24, 1910. Some five years ago he had been stricken with paralysis.

He was born in Randolph, N. Y., on October 11, 1848. He went to Kansas in 1871 and became one of the founders of Gaylord, in Smith county. Early in his career he became a leader in political affairs, and an active worker until the Populists lost control of the State, and he was removed as superintendent of insurance by Governor Stanley in 1899.

He was admitted to the bar in May, 1879, and in 1884, when he was elected a member of the legislature, he was selected to be chairman of the railroad committee of the lower house and a member of the committee on insurance. He became superintendent of insurance on February 1, 1897, and he continued in office until March 11, 1899.

One of his first rulings as superintendent was that insurance companies that did not pay claims should not be allowed to transact business in the State. He refused licenses to the New York Life, the Mutual Life and the Connecticut Mutual Life, that were parties in a controversy over the policies of the husband of Sarah E. Hilmon. He was enjoined by the courts in several instances.

He ruled also that the Clarkson rating bureau was a sort of trust organization among the insurance companies and he barred the bureau from the State. He drafted the law to require the companies to pay a tax of 2 per cent.

**NEW MEXICO PLANS
TO DO BETTER NOW.**

In view of the fact that New Mexico is about to reach the dignity of a State of the Union, added interest attaches to the attitude of the Insurance Department of the Territory on the prevention of fires. The fire loss in the Territory during the past two years has been disastrous.

Superintendent Chavez in his annual report has these things to say:

New Mexico has contributed generously during the past year towards the national ash heap donating an insurance loss of approximately \$424,000.

The responsibility for this result is largely due to the newer towns in the eastern part of the Territory, but conditions there and in other parts are materially improving, and much

better results are looked for in the future.

The estimated loss in the United States during the past year were \$203,649,000, or \$35,000,000 less than the year before. To have this amount of wealth go up in smoke every year is a disgrace, and certainly not in conformity with American principles. In taking care of the conservation of our natural resources we would do well to give heed to the annual drain upon them by fire. Property destroyed by fire is gone, and the funds of insurance companies cannot replace them. This tremendous waste can be greatly diminished, as it is shown that Berlin, with a population of 3,000,000, has a fire loss of \$150,000 annually, while Chicago with a population of 2,000,000 has an annual loss of \$5,000,000. It is estimated that 50 per cent. of all losses are the result of carelessness.

I believe that complete publicity touching upon the enormous annual waste by fire with the even more important subject, "The Prevention of Fire Waste," should be of peculiar interest to the people of New Mexico. To bring it to the attention of municipal bodies and the public in the endeavor to secure the co-operation of all in removing the physical causes of fire and to forward the movement for better fire protection and building construction along all lines.

There are no doubt many who are anxious to know just what to do to improve and to remove the possibilities of fire, while on the other hand there are many who are indifferent or do not appreciate the needs of better construction nor the dreadful fire and death traps that surround them.

I will endeavor to bring this subject before the citizens of New Mexico through the department bulletins and I am ready to assist them in all possible ways so that the end desired may be attained.

**GROUP INSURANCE
FOR 150 EMPLOYEES.**

The Nevins-Church Press Company of Glen Ridge, N. J., has insured with the Metropolitan Life its 150 men and women employes for sums ranging from \$250 to \$1,000. The Nevins-Church Company has paid the premiums and will continue to do so annually as long as the insured persons remain in the employ of the company. Should they resign or be discharged, the policy will be turned over to the individual for future payments by him.

In the event of death while in the company's employ, the full amount in the policy will be collected and paid over to the beneficiary named in the policy.

A. G. McIlwaine, Jr., president of the Orient Insurance Company of Hartford, has been chosen president of the Insurance Institute of Hartford.

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

INDEPENDENT SURETY.

R. G. Babbage, who, as president of the proposed Independent Surety Co. of New York, was engaged in the organization of that concern with the co-operation of persons connected with the United States Realty and Improvement Company, states that the organization of the company has been deferred indefinitely. It was planned that the company should have a paid up capital of \$500,000 and a surplus of \$500,000. It was supposed by surety underwriters that the company was formed with a view of handling the surety business of the United States Realty and Improvement Company, the Fuller Construction Company and all the sub-contractors of these two big construction companies. This business amounted to considerable volume and heretofore had practically all been placed with the National Surety Company.

Since the organization of the Surety Association of America and the establishment of the new schedule of rates, which provided for a premium of one-half of 1 per cent. per annum on the amount of the contract for surety bonds on contract work, there has been considerable dissatisfaction among some of the large contractors of unquestionable standing because of what they considered the excessive rate and because they were allowed no concession from the rate charged smaller concerns less well equipped to carry out their undertakings. It is believed among surety men that this situation was an important factor in the proposed organization of the Independent Surety Company.

Another feature which was attractive in the plan of the new surety company was that under the rule of the Surety Association of America the member writing the bond and reinsuring any part of the same with another member could retain as a commission 30 per cent. of the premium on the business ceded. Under such an arrangement the Independent Surety would earn quite a handsome profit in the form of commission on the contract surety business derived from the large construction companies with which it was affiliated, which it passed along to other surety companies in the form of reinsurance.

With the announcement that the proposed organization of the Independent Surety Company has been abandoned, speculation is rife among surety underwriters as to what if any concessions, either as commissions or rebate from the tariff, the construction companies backing the Independent Surety Company secured from the association's rating bureau or from

the National Surety Company, which it is understood will now continue to write the bonds for them.

FOREIGN JUNKET FOR OHIO COMMITTEEMEN.

Governor Harmon of Ohio has named a committee according to the authorization of the Ohio Legislature to report at the next session on the advisability of substituting for the present proportionate risk law the British workmen's compensation act in the way of liability insurance. The members of the committee, who are authorized to make a trip to England and Germany in order to study the European system of a schedule of compensation for each kind of injury to a workman, regardless of contributory negligence, comprises William J. Rohr, a Cincinnati printer; William Winans, a railroad conductor; J. P. Smith, a Cleveland master horseshoer; J. Harrington Boyd, a Cleveland attorney, and George W. Parks, superintendent of the American Seeding Machine Company at Springfield.

SURETY MEN MEET.

The Surety Association of America held a meeting yesterday at the Waldorf-Astoria Hotel, at which President Henry D. Lyman of the American Surety Company presided. The question of bank depository business in Indiana was discussed, but without any action being taken. The association will receive reports later on the bank fidelity competition of Lloyds, London, and cotton bills.

In New England.

THE Maryland Casualty, whose charter was recently amended to permit of its doing a fidelity business, Monday received authority from the Massachusetts Insurance Department to transact the business of fidelity and surety insurance in that Commonwealth. The new branch will be under the supervision of Geo. W. Havens, of Boston, resident manager, and it is expected that President Stone will visit the Hub ere long to the end of securing a specialist for the fidelity department.

Field & Cowles Admit Two Partners.

What the knowing ones in the Boston insurance district had been predicting for some weeks, chrystalized into certainty last Saturday when the announcement was made that John A. Jennings and George Neiley had been admitted to the firm of Field & Cowles. Mr. Jennings has been in the employ of the firm for more than twenty years, most of that time as counter man, and latterly in charge of the local department. He has a large acquaintance, and is deservedly popular with both the underwriters and the buyers of insurance. Mr. Neiley entered the office of Scull and Bradley (the forerunners of Field & Cowles) in his early manhood. He became special agent of the Royal and the Pennsylvania for Connecticut in 1889, and in 1890 was advanced to take charge of the entire New England field for those companies. He has twice been elected president of the New England Insurance Exchange, and is a fine type of the field men of that territory. With Mr. Jennings in charge of the local office, Mr. Neiley looking out for the agency field and Herbert Damon, as heretofore, caring for the marine department, the titular members of the firm will have more ample scope for the general supervision of its affairs.

Brigands Bother Boits.

A press dispatch from Rome under date of the 11th inst., brought the astonishing information that Robert A. Boit of Boston, resident manager of the Commercial Union, and his brother Edward, who is an architect, were held up by brigands while automobiling last Sunday in the vicinity of Florence. The wives of the travelers were with them, and after the ruffians had forced them to give up all the money they had with them (\$60), held them as hostages while the ladies went to their villa at Palavo for \$200 more. Thereupon the party

was set at liberty with the injunction to make no mention of the matter under pain of death. The menace was disregarded, however, and the police of Florence are now after the bandits. Judging by the usual results of such pursuits in Italy, the bandits won't have to worry any.

Travelers Wins.

In 1908 Dr. T. F. Stanton of Bridgeport, Conn., while carrying earth in the garden, ruptured his appendix. He was operated upon and died of septicemia a few days later. He was insured in the Travelers under a \$6,500 accident policy, and when his brother, James J. Stanton, applied for the proceeds, the company declined to pay. Litigation followed, the point at issue being whether Stanton's death was accidental or not, the plaintiff affirming accident and the defendant denying it. On Wednesday of last week, in the Superior Court at Hartford, Judge Curtis rendered a decision for the defendant company.

Enthusiastic Meeting.

The annual meeting of the General Agents' Association of the New England Mutual Life, which took place Thursday and Friday of last week at the Marlboro-Blenheim, Atlantic City, is described by those who were present as the most successful gathering the association has ever had. A wealth of timely topics was discussed at the three business sessions, and the dinner with which the proceedings came to an end was enjoyable to a degree. The new New England spirit was in evidence throughout. The following officers were elected for the ensuing year: President, Albert Curtis of Boston; vice-president, Major Guinn of Atlanta (re-elected); secretary, Albert R. Thomson of Detroit. The foregoing with Lee C. Robens of Hartford make up the executive committee of the association.

New England Brevities.

At Tuesday's meeting of the Boston Board of Fire Underwriters Messrs. Rothery, Hoffman and Kollock were elected members of the rating committee for three months. Messrs. Rothery, Muller and Crain were elected to serve on the brokers' committee for one year.

Gains in Life Insurance.

LIFE insurance business during the first half of this year, according to a compilation made by the "Insurance Press," show a decided increase in volume, as against the corresponding period of 1909. Following is a summary from the statements used in the compilation:

Aetna—7,717 policies issued for \$20,933,504 of insurance, against 8,298 policies for \$19,809,069 last year.

American National—Issued business amounted to \$1,500,000, and business in force increased \$800,000.

Berkshire—New business \$2,324,815, against \$2,089,544 last year; mortality experience 63.52 per cent., compared with 70.5 per cent. in first six months of 1909.

Connecticut General—Business written, \$4,694,515; insurance in force increased 5 per cent.

Home Life, New York—Business paid for \$5,262,663, compared with \$4,739,833 for the corresponding period of last year; increased in business in force, \$1,536,952.

Massachusetts Mutual—7,245 policies issued for \$18,788,000, as against 6,974 policies for \$16,536,000 in first half of 1909.

Mutual Benefit—14,349 applications for \$44,074,595 of insurance; an increase of \$5,998,401, compared with similar period last year. In June 2,386

applications were received for \$7,347,350 of insurance; an increase of \$1,129,832, compared with similar month last year.

National of Montpelier—Written basis, \$10,557,193.29; paid for basis, \$8,574,711.29; gains of 14 per cent. and 15 per cent., comparing the record with similar period last year.

New England Mutual—Paid for business, additions, revivals and increases, \$14,251,542, as against \$11,808,430 first half 1909; insurance in force increased \$844,614.

New York—Paid for business was a fraction more than \$75,000,000; an increase of about \$500,000, compared with similar period last year.

Pittsburgh Life and Trust—Insurance applied for, on which premiums were paid in cash, was in excess of new insurance paid for in cash during the twelve months of 1909.

Provident Life and Trust—New business, \$17,600,000; a gain of 28 per cent.

Reliance—Paid for business in June (\$1,065,000) broke all records by more than \$50,000.

Security Mutual of Binghamton—The approved business was 34 per cent. in excess of that during the first six months of 1909, and the amount paid for was 82 per cent. in excess of that paid for during the corresponding period last year.

United States—Business written, \$1,114,484; an increase of 14 per cent.

LIQUIDATION LAW

SCORES FIRST SUCCESS.

Upon the application of Special Deputy Superintendent of Insurance Dunham, Supreme Court Justice Andrews of Syracuse granted final orders in the liquidation of the Aetna, American, Capital, Mohawk, Phoenix and Reliable Mutual Fire insurance companies of Onondaga County.

These companies were, before July, 1909, under the management of the same officers and were a year ago taken over by the Insurance Department under the new liquidation law. At that time they had obligations consisting largely of unpaid loss claims, aggregating \$20,000, and a very small amount of assets. They have been liquidated together, the department having collected an assessment from about 5,000 policyholders or members from which, with the moneys on hand, it has realized \$30,477.

The claims aggregated \$23,550, and were allowed after investigation at \$19,684. The total cost of liquidation, including salary of the special deputy superintendent, clerks and the expenses of collecting assessments, has been \$5,220, or about 17 per cent. of the amount collected.

Loss claimants will be paid in full, and, except in the Phoenix Mutual case, with interest. Moreover in most cases there will be a considerable div-

idend for the members who have paid their assessments.

The failure of these companies had much to do with the agitation that resulted in the adoption of the new code by the legislature with regard to co-operative fire companies.

A first class life underwriter with a successful field record, and an untarnished reputation can secure good open territory by addressing

SECURITY MUTUAL LIFE INSURANCE COMPANY

Binghamton, N. Y.

Bardoe's Column.

A special meeting of the Insurance Brokerage Association a membership committee of five was appointed for the purpose of inviting a number of firms not heretofore represented to become members of the association. The association was addressed by James F. Hoey, a member of the assembly insurance committee. A report was received from the special committee appointed in connection with the proposed reduction of commissions. R. C. Rathbone, who was chairman, said that a number of brokers had communicated with him recommending drastic action. Seelye Benedict strongly recommended proceeding in a dignified, business-like manner, making a protest to the companies. At the suggestion of John A. Eckert it was decided that the special committee be considerably enlarged. The committee will confer with the executive committee of the Fire Underwriters Association.

Charles H. Post, United States manager of the Caledonian Insurance Company, sailed on the Caronia last Saturday.

R. M. Bissell, vice-president of the Hartford Fire Insurance Company, has been elected chairman and A. E. Duncan, president of the Franklin Fire, vice-chairman of the executive committee of the Fire Underwriters Association.

Manager J. J. Guile, of the Sun Insurance Company, arrived on the New York Monday.

The Omnium Insurance Corporation of London has appointed J. S. Frelinghuysen representative for the United States and Canada. The com-

pany has a subscribed capital of \$1,000,000 and a paid-up capital of \$500,000. They will confine their operations to writing surplus lines for the present.

A. E. Duncan, president of the Franklin Fire Insurance Company of Philadelphia, will act as chairman of the executive committee of the Fire Underwriters Association during the absence of Chairman R. M. Bissell, who is about to leave for a protracted vacation.

E. H. A. Correa, vice-president of the Home Insurance Company, and R. M. Bissell, vice-president of the Hartford, representing the executive committee of the Fire Underwriters Association, called on President Henry Evans of the Continental and Fidelity-Phoenix Fire insurance companies regarding enrolling these two companies in the new association. After the conference President Evans said:

"I have had no opportunity to read the proposed plan of organization. An outline was given me verbally by Messrs. Bissell and Correa and a copy has been left for consideration in detail. In a general way I can say that we are opposed to any plan that does not recognize the contingent plan of compensation, and, further, I feel that to pay one commission in one part of the country and another and more liberal in another section is unfair."

Superintendent of Insurance Hotchkiss has approved the standard form typewriter policy submitted by the special committee appointed by the New York Board of Fire Underwriters. It will become lawful on January 1, 1911.

 Curtate Summations of D Column.
 Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
 Divide temporary insurance values by immediate temporary annuities.
Computing Annual Endowment Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.
Computing Annual Pure Endowment Premiums:
 Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
 By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
Computing Annual Semi or Double Endowment Premiums:
 Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
Computing Limited Premiums:
 Divide the proper single premiums by immediate temporary annuity.
Computing Surrender Values:
 Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
Extended Insurance with Fractional Paid-up Endowment:
 Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
Computing Terminal Reserves:
 Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
 Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
 Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
Warranted Commissions for New Business.
Surrender Values.
Dividends.
 For these purposes the "select and ultimate" will be most useful.

Brokers Asked to Pay \$10,000 for Services for Legislative Bill.

IN yesterday's "Journal of Commerce and Commercial Bulletin," the following paragraph appeared: "The insurance brokers of New York are, to the anguish of their pocket nerves, in receipt of a bill for \$10,000, counsel fees for services rendered in connection with the recent assembly bill for regulating the placing of fire insurance in non-admitted concerns abroad."

* * *

In this morning's issue of "The Journal of Commerce" the following appeared:

"At yesterday's meeting of the New York Board of Fire Underwriters a letter was read confirming the information contained in yesterday's issue

of this journal that the insurance brokers had received a bill for \$10,000 for legal services in connection with legislation and the delightful news that the brokers would let the board pay the bill if it wished so to do. The brokers will not charge any commission on the \$10,000. So gratified were the members of the board that they decided to honor it with two cemeteries instead of one, and it was referred to the committees on finance and laws and legislation."

* * *

George Richards, of the law firm of Richards & Heald, appeared at the hearing before Superintendent Hotchkiss in favor of the above bill on behalf of the Board of Brokers. The bill which had been drafted under the

auspices of Superintendent Hotchkiss, was introduced in the Legislature, but later was withdrawn. At the hearing which Mr. Hotchkiss gave, were representatives of fire companies, marine companies, casualty companies, brokers and policyholders. In addition to Mr. Richards's formal plea in behalf of the bill, Seelye Benedict, president of the Board of Brokers, made a speech at length in favor of the bill. The hearing began about 11 o'clock in the morning, and lasted for well nigh twelve hours, with the exception of two recesses, one for luncheon and the other for dinner. At this hearing John O. Heald of the same law firm appeared for the New York Board of Fire Underwriters.

A Western View of Expense.

CHICAGO, July 20.—Various angles of the expense reduction question are now coming to the front rapidly. A number of Chicago commission agents held an informal meeting recently and afterwards gave out their views on the subject. In the first place they doubt the sincerity of the effort to reduce expenses, except as it applies to commissions of agents. Then they hold that the commissions paid by conservative companies are not too high at present, when the expense of running a large city agency and the service required by the companies are taken into consideration. They fur-

ther suggest that there is no occasion for uniformity of commissions as the requirements of companies on their agents vary. Some agents are but little better than brokers, practically passing up to the companies the inspections and the underwriting, while others inspect and select the business and leave the companies but little to do except map and record it. It is held very reasonably that the latter class of agencies is entitled to higher commissions than the former.

The National Association of Local Agents is making it evident that it does not propose to let the compensation of local agents be reduced with-

out protest and some of the managers recognize the justice of a demand that the burden of expense reduction shall not fall solely on the local agents. One prominent manager says that the companies will be obliged to compensate the local agents in some way if they reduce their commissions. He suggests a reduction in the number of agencies as one means to this end.

It is a fact beyond controversy that fire insurance is costing the public considerably more than is necessary. The average underwriting profit is certainly low enough now. If the cost to the public is to be reduced

it must be done by reducing losses or expenses. The reduction in losses is beyond the control of the companies, except that with better agents they might avoid over-insurance more fully and by turning down more doubtful risks might avoid some bad losses. Under present conditions, however, it is useless to hope for much improvement in these directions. The last recourse, then, is in reduction in expenses, and to this subject the present thought is being given. Comparatively few men are making any excessive amount out of fire insurance, but a very large number are getting a little out of it and the public is paying for the excessive competition they create, the vast amount of supervision they require and the duplication of work by many companies.

The manager who suggests compensation to agents for reduced commissions holds that the inspection bureaus ought to do the inspecting for all their members and that the expense of sending numerous special agents to go over every large risk should be eliminated, just as it is in the Western Factory Insurance Association and in the adjustment of losses by the Western Adjustment Company. This doubtless would help some, but it would be a minor saving compared to that which would be effected if the number of agents and so-called agents was reduced a half or two-thirds, the inferior ones being eliminated, and perhaps only half as many field men be required as at present, and the cost of licenses, supplies, maps, exchange and accounting reduced.

But any such change contemplates the retirement from certain fields of a number of companies—presumably the smaller ones, and, of course, these companies will not consent to any such arrangement unless forced to it. Some of the smaller companies are demanding that any arrangement made regarding commissions shall permit them to pay more than the large companies pay, otherwise they will be run out of business. This means that a rate which would be sufficient for the large companies on a low commission basis must be loaded enough to enable them to pay higher commissions. In other words, the public is not to receive the benefit of the ability of the large companies to do business at a low expense ratio, but is to be taxed in order that a number of small companies, which, outside of the cities, are entirely unnecessary as far as the public is concerned, may be kept in the field and enabled to make a profit.

There have been plenty of good examples in the West of small companies which have been able to hold their own, grow larger and pay good dividends in the face of the competition of the largest companies, so long as they staid in or near their home States. It has been generally when they sought to go into a large territory that they have found the greatest difficulties. The attitude of some of the most prominent managers is thoroughly friendly to the small companies so long as they stay at home. They recognize that these companies are able to exercise a most beneficent influence on legislation and that with their local prestige they create a more friendly feeling towards fire insurance on the part of the public. It is when they get away from home and, in an effort to gain foothold, pay excess commissions or cut rates and start outsiders in the business because they are unable to find places in established agencies, that they become trouble makers. There are perhaps forty, perhaps twice that many, companies that would be ranked as small, operating in a number of States, getting only a little business out of each except the home State, competing not only with the big companies but with each other, employing many special agents, buying many maps and otherwise increasing the cost of business over what it would need to be if they devoted the same energy to the cultivation of their home States or to a few States on a more extensive plan.

Any scheme for reduction of expenses which contemplates enough margin in the rates so that small companies can operate far from home on an expensive basis, so that enough field men shall be employed to supervise and collect balances out of an army of sub-agents, side-line agents and other hangers-on, is likely to be a failure, for it will mean a continuance of present conditions.

If the public is to receive the reduction in cost of insurance to which many persons believe it is entitled it means that the pure premium to cover the losses must be loaded enough to pay expenses and a fair profit to companies economically managed, but not enough to give a profit to those companies which cannot compete with others on even terms, or to pay for support and supervision of a horde of unnecessary so-called agents. The barnacles on the business are what are running the expense up. Scarping them off may be a painful operation—to the barnacles—but it will be necessary if expenses are to be reduced,

EMPLOYERS LIABILITY INSURANCE ABROAD.

Miles M. Dawson, president of The Chronicle Company, sails for Europe to-day, accompanied by Mrs. Dawson. He will visit the capitals of the most important European countries, for the purpose of obtaining certain information for the Federal Government, and will attend the International Conference on Social Insurance at The Hague on September 6 to 8, as a delegate of the Government.

The results of the study of European laws relating to employers liability and workmen's compensation and their operation, which Mr. Dawson, in co-operation with Dr. Lee K. Frankel, made while in Europe two years ago, on behalf of the Russell Sage Foundation, is announced for early publication.

For the benefit of readers of THE CHRONICLE, Mr. Dawson has promised, while abroad, to prepare for publication in this journal signed articles, stating in the simplest terms what the laws of these various countries are and somewhat fully how and how successfully the liability of employers is covered by insurance, and explaining the different types of insurance, such as State, State compulsory, State voluntary, mutual compulsory, mutual voluntary, stock company; contributory schemes, such as establishment funds, etc.

This will be the first presentation of this interesting subject to insurance men of the United States. It will consist of signed contributions mailed to THE CHRONICLE, exclusively, from each of the capitals of the most important countries. These every one interested in the problem should give himself the opportunity to read.

Undoubtedly great changes are coming in this country. The United States must discover a system of compensation, fair alike to the victims of the accident and to the man for whom they are working. Present methods here constantly embitter the mutual relation of capital and labor. Too large a proportion of the claims go to the courts. Employers are forced to resist often in cases, which they do not believe unjust. The delay of litigation in many instances has a pitiful effect.

The General Fire Assurance Company of Paris, France, has been admitted to New York State. The company has deposited the \$500,000 required to permit it to do business here.

CONTINENTAL NOT IN EASTERN UNION.

Henry Evans Says Lack of Provision for Contingent Commission Is Sufficient Ground for Refusal to Sign.

HENRY EVANS, president of the Continental Insurance Company, has notified R. M. Bissell and E. H. A. Correa that the Continental and Fidelity-Phoenix do not care to joint the newly-formed successor to the old Eastern Union. Mr. Evans's letter follows:

July 19, 1910.

Messrs. R. M. Bissell and E. H. A. Correa, Committee:

Gentlemen: After carefully considering the question of the advisability of associating ourselves with "The Fire Underwriters Association," we

have come to the conclusion that we do not care to become members of that organization on the basis set forth in the constitution and by-laws which you left with the writer.

The fact that no provision is made for the payment of a contingent or profit-sharing commission would alone prevent us from having membership in this organization: First, because a large percentage of our agents reporting to the New York office are compensated on this plan; and, second, because we believe that such compensation is desirable from the standpoint of the public, the agents and the companies.

The payment of certain commissions in one section of the country,

yielding nearly half of the premium income derived from the United States, and different commissions in another section, both under agreement through associations of companies, cannot in our opinion be justified.

There are numerous minor points connected with the plan as set forth in the constitution and by-laws which have been submitted by you that are not satisfactory to us. Chief among these is the separation feature. But inasmuch as we have decided that the first two points mentioned are sufficient to prevent our joining the association, it will not be necessary for us to go further into detail.

HENRY EVANS,
President.

Dutchess President Indicted.

AN indictment for forgery in the third degree was returned by the Dutchess County Grand Jury at Poughkeepsie last Thursday against President Lewis H. Vail of the Dutchess Fire Insurance Company. Mr. Vail was arraigned in court. Through his attorney, William H. Wood, he pleaded not guilty, with the privilege of withdrawing that plea or entering a demurrer. Mr. Wood intimated that he might move to inspect the minutes of the Grand Jury. Third Deputy Attorney General Geo. A. Fisher of Albany, who conducted that he would oppose any such motion.

Supreme Court Justice Morschauser fixed Mr. Vail's bond in the sum of \$2,000, which was furnished by his brothers, J. Watson Vail and A. H. Vail. Arguments of counsel on the matter of inspecting the Grand Jury minutes and other points affecting the

indictment which may be raised by the defendant's lawyer will be heard on July 25 before Judge Morschauser.

Mr. Fisher told the court that he was not satisfied with the work of the Grand Jury, inasmuch as it had failed to find bills charging grand larceny and perjury against President Vail. He asked the privilege of resubmitting the case if he so desired. The motion was granted.

When the indictment against Mr. Vail was reported to Judge Morschauser the insurance company's president was at home sick in bed. Mr. Fisher was skeptical about the genuineness of his illness, and the court sent Dr. Von Tiling to examine him. The physician did so, and said that Mr. Vail had heart trouble and hardening of the arteries, and could not stand any great strain, as he already showed a heightened temperature.

Judge Morschauser observed that

he did not want to bring a sick man to court, and would wait until the next day. President Vail on his own initiative stopped all delay by coming to the court house, accompanied by Dr. J. M. Poucher and I. Reynolds Adriance, two directors of his insurance company. The directors and stockholders of the Dutchess Fire Insurance Company have indorsed all Mr. Vail's acts, including the alleged mutilation of the records on which the indictment was returned.

Mr. Vail appeared weak and shaken. He said that the members of the Grand Jury appeared to take what Mr. Fisher told them about the law and facts as absolute truth, and the members seemed to feel that to some extent they had to accept Mr. Fisher's construction of the affairs and incidents affecting his administration of the Dutchess Fire Insurance Co.

The charge that President Vail mu-

THE FIDELITY & CASUALTY COMPANY

NEWARK, N. J.

tilated the minutes of the record book of the Dutchess Fire Insurance Company, was included in the original list of charges preferred by State Superintendent of Insurance Hotchkiss, against President Vail. It was met at the time by a denial by the executive committee, who explained that the resolution, which was to fix the reinsurance on a basis of 25 per cent. between the old and new Dutchess insurance companies, was never passed. They said it had got on the minutes of the new company by mistake, and when the error was discovered it was erased. Subsequently, a low rate of reinsurance was agreed upon.

The directors and stockholders in both companies are substantially the same. The Dutchess Insurance Company was rendered bankrupt by the California earthquake, but its successor, the Dutchess Fire Insurance Company, is considered to be a solvent and growing concern.

METROPOLITAN LINE PIER FIRE THOUGHTS.

On the new Metropolitan Line pier, which was formerly used by the Red Star line, and which burned last Saturday, it is said that a large part of a cotton shipment was consumed. The remainder of the cotton is said to have been put on board the steamboat, James S. Whitney, of the same line, which was beached at Vineyard Haven on the previous night with fire aboard.

The Metropolitan Line pier burned on a Saturday afternoon, and so did the Bremen docks in Hoboken ten years ago. The Metropolitan fire last Saturday, spread much faster than did the Hoboken fire at its beginning, according to newspaper eyewitnesses of both fires. The work of the New York fire department, after the arrival of Chief Croker in rescuing the adjoining pier, once the American Line pier, contrasted strongly with

what the Hoboken fire department had been able to do with their fire-fighting facilities ten years ago; then more than 150 lives were lost, and the property damaged approached \$7,000,000. This time the property damage was well under \$1,000,000, and, so far as known, no lives were lost. The Metropolitan fire started at 12:35 and was declared under control at 1:40 o'clock.

The Hoboken fire occurred on Saturday, June 30, 1900, and most of the many of the fire insurance companies have closed their reports for the six months in the belief that nothing considerable would happen between then and midnight. One London company had annually sent its report for the six months to the home office by a steamer which had sailed that morning.

LIABILITY RATES UP? 5 per Cent. FOR BROKERS.

The committee of liability underwriters, consisting of the Travelers, Ocean, United States Casualty, Employers Liability and Aetna Life, is holding what it expects to be its final meeting in Hartford to-day, and will report next week to the companies in regard to what they believe to be necessary, because of the nearing approach of September 1, when the two Wainwright-Phillips employers liability laws will go into effect in this State.

The committee expects to submit its report to a general meeting of the companies to be held some time next week. In the meantime, some of the companies are cautious about writing any policies covering New York State, where there is any possibility of the work coming within the law for compulsory workmen's compensation for injuries, and are seeing to it that any rates, which New York agents have occasion to quote, shall be subject to change before September 1, and

that all renewals may have a substantial increase in rate.

It has been planned by the companies to limit the commission to brokers at 5 per cent. In this connection it is pointed out that the interest of the brokers will prompt them to accept this 5 per cent. rate of commission, in order to stop a proposed plan on the part of contractors to organize a mutual company.

LIABILITY MEN MAY QUIT LOUISIANA.

The casualty companies in New York are waiting for advices from their agents in Louisiana in regard to conditions created by the new law, requiring companies to make claims within thirty days, and to make monthly settlements on weekly indemnity claims, instead of at the end of the period of disability. In the meantime, at the head offices, they have little to say.

It became known yesterday that the United States Casualty Company and the Preferred Accident Insurance Company, at least, had ceased writing new business in that State. Some general decision on the part of the companies is expected as soon as the Louisiana agents are heard from.

MORE LIQUIDATIONS.

Supreme Court Justice De Angelis of Utica has granted orders upon the application of the State Insurance Department for the liquidation of the Citizens Fire Insurance Association of Utica, and the Empire State Fire Insurance Association, also of Utica, two co-operative concerns operating in Oneida, Madison, Herkimer and nearby counties. An examination of these companies last week showed the liabilities in excess over assets of \$2,401 in the case of the Citizens, and \$684 in that of the Empire. F. G. Dunham, chief of the liquidation bureau of the department, has been put in charge.

Western Sayings and Doings.

AT ITS meeting last week the Ohio State Fire Prevention Association adopted resolutions favoring the preparation and publication of plans and specifications for buildings of various classes, to be brought to the attention of architects and building contractors with a view to securing their greater co-operation in the direction of better fire resisting construction. Having declared its views the association referred the question to the executive committee for consideration.

While these Western fire prevention associations labor under many handicaps and discouragements they really are accomplishing much good in reducing the fire waste. The Nebraska association a few days ago inspected Grand Island, taking along a deputy fire commissioner to enforce correction of conditions which were found to need attention. Dirty basements and dangerous electrical wiring were found in many buildings. The city administration showed an admirable willingness to co-operate with the association and the State Fire Commissioner's department in securing better conditions.

* * *

Close observers express the opinion that the stock-selling mania in the West has passed its height and is now on the wane. The slowness with which present promotions are progressing certainly makes it appear that the stock salesmen no longer are able to deliver the goods as in the old days. A number of embryo companies are on the stocks in various parts of the West, with little prospect, in some cases, that they ever will be launched.

The stock-selling game has received some severe setbacks in the past few months, beginning with the advertising

given the Consolidated Casualty. Following that the Wisconsin insurance department gave the Old Line Life of Milwaukee severe criticism for the expense of its promotion. Now the receivership of the Continental Assurance and International Fire of St. Louis has been given much publicity and will be given more before it is closed. The failure of these concerns has caught the country bankers hard and will have its effect in the influence they will exert with local investors.

Meanwhile several of the insurance commissioners have gone as far as the laws will let them in placing obstacles in the way of promoters and when they could do no more in that direction have used publicity.

The power of supervision over promotions recently conferred upon Superintendent Hotchkiss of New York, is being asked for by Superintendent Blake of Missouri and probably will be sought by several other commissioners when the legislatures meet next.

The Title Guaranty and Surety has appointed Archibald McM. Creed manager of its branch office at Indianapolis, succeeding B. F. Higdon. Mr. Creed for some years has been a resident of South Bend, Ind., where he built up a considerable surety business as general agent of the Illinois Surety, as well as a liability and fire insurance business. He is a lawyer by profession and a young man of energy. A special agent already has been put at work in the State and the sub-agents he will appoint, together with those the company already has and those Mr. Creed will be able to swing to its service, will give it a good plant in the State. The Title is making rapid strides in the

Middle West, where it is operating mostly on the branch office plan.

A sensation was caused in Illinois last week by the returning of indictments by the Grand Jury at Rock Island against thirteen persons, mostly connected with the Fraternal Tribunes, a fraternal order. Last year the Fraternal Tribunes merged with the American Home Circle. It is alleged that the liabilities of the latter were understated and that the Fraternal Tribunes spent \$100,000 in paying American Home Circle claims. Later the merger was dissolved and many members of the Fraternal Tribunes took insurance in the Northern Life of Illinois. It is claimed that in the merger and dissolution officers of the two fraternal orders and some other insiders "milked" the Fraternal Tribunes dry. The charges against the different indicted persons vary, but several of them are accused of embezzlement, conspiracy to defraud the Fraternal Tribunes, and conspiracy to defraud the general public. Similar charges are made against others, together with stealing the records of the Fraternal Tribunes. Still others, who hold alleged dummy notes against the Fraternal Tribunes, are charged with perjury in their testimony before the Grand Jury. The investigation before the Grand Jury has taken about two months.

inspectors shall be technical men. This would deprive certain aldermen of their present privilege of securing inspectors' positions for political friends of theirs who are not qualified for such work. It is claimed also that this provision would bar most of the labor union men from inspectorships.

THE DEATH OF DR. WARD.

At a meeting of the board of directors of the Prudential Insurance Company in Newark on Monday, the following was adopted in regard to Dr. Leslie D. Ward, vice-president of the company, whose death occurred in London on July 13:

The board has learned with profound regret of the death of Dr. Leslie D. Ward, the vice-president of this company, which occurred Wednesday, July 13, 1910.

The many and valued services rendered by Dr. Ward to the company are beyond enumeration, the duration thereof being contemporaneous with its existence.

When a mere schoolboy he had taken arms in his country's defense. Upon his return to civil life, he resumed his interrupted studies and subsequently entered upon the career of a physician, a profession for which he showed marked ability and in which he seemed destined to win a high position. Brought by his profession in daily touch with the problems and perplexities of those who labor, his sympathies in their behalf were most keenly aroused so that he was at once attracted by the suggestion of the formation of a company to give to the laboring classes the benefits of life insurance. With characteristic vigor he lent his aid from the very outset to the promotion of the company's interests, being largely instrumental in securing the financial support essential to its success and adding to this that which was even more essential—personal encouragement and enthusiasm.

When the company was organized Dr. Ward was but thirty years of age and for thirty-five years thereafter to his death he gave to it constant and devoted service. He was elected a member of the first board of directors and also medical director, both of which offices he held for the remain-

der of his life. As the company grew it made increasing demands upon Dr. Ward to which he never failed to respond. Finally abandoning a successful professional career in order that he might devote his whole energies to the promotion of the company's interests, he became vice-president in 1884, discharging the duties of that important office with ever increasing benefit to the company. Never forgetful of the character of the business in which the company was engaged, his earnest thought was always for the protection of those for whom it was created and for the promotion of their welfare. The Prudential was the chief interest in his life and in its development he played a major part. Mastering every detail of the business peculiarly technical, he nevertheless was able to view clearly the broader questions of management and to bring to their solution the conservative consideration of a trained mind. His services were never given grudgingly, but where the company's interests were at stake, with a whole hearted enthusiasm he labored in its behalf. Notwithstanding the increasing burdens which his important position placed upon him, Dr. Ward was approachable at all times by those in the company's employ, and no one held a warmer place in the hearts of the employees, both at the home office and in the field, than did he. His benefactions were many, but with the unostentatiousness which was one of his chief characteristics most of them were unknown except to the recipients. He was ever ready to lend his aid and assistance to any enterprise having for its object the public welfare. His death removes from the service of the company a valued counsellor, an efficient executive and a beloved official.

In recognition of Dr. Ward's services, it is ordered that the foregoing minute be entered in full in the minutes of the board, that a copy properly engrossed be sent to the family of Dr. Ward and also that copies be given to the press.

And it is further ordered, that on the day of Dr. Ward's funeral, Monday, July 25, the home office, with the exception of such departments as are necessarily kept open by reason of legal requirements, shall be closed at 2:30 p. m., and that the field force be requested for two hours on that day, namely, from 3 until 5 p. m., Eastern time, to discontinue the transaction of

all business except such as may be rendered necessary in order to observe legal requirements.

And it is further ordered that the home office buildings of the company be draped in mourning for a period of thirty days.

The honorary pall-bearers, chosen for the funeral of Dr. Ward, are ex-United States Senator John F. Dryden; Uzel H. McCarter, Thomas M. McCarter, William Scherrer, Chancellor Mahlon Pitney, Chief Justice William S. Gummere, George W. Perkins and ex-Governor Franklin Murphy. Directors of the Fidelity Trust Company and the Union National Bank have adopted resolutions of regret in regard to Dr. Ward, who was a director in each institution.

SAIL FOR EUROPE ON COTTON BILL MISSION.

John Gardin, vice-president and head of the foreign exchange department of the National City Bank, and William B. Joyce, president of the National Surety Company, sailed for Europe yesterday on the Lusitania for the purpose of meeting bankers in London and Paris in connection with the plan for surety companies to safeguard cotton bills of lading. Both surety men, bankers, railroad men and cotton merchants are awaiting the result of this trip.

ATLAS LIFE QUILTS.

Steps have been taken to liquidate the Atlas Life Insurance Company of St. Louis, which recently abandoned its plan to become a live concern. The assets consists of certificates of deposit, cash in bank, and notes given for deferred payments on the stock. The first partial disbursement of the assets to the stockholders of \$88 a share was determined upon by the organization committee. The stockholders expect to do better than they would have, had a receiver been appointed by the court to supervise the liquidation.

CHIEF CROKER SAFE, MAYOR GAYNOR SAYS.

As a consequence of the large number of protests from merchants and fire underwriters in letters to Mayor Gaynor he had something to say on Monday in regard to the Washington street fire investigation and Chief Croker's status.

"The investigation into the Washington street fire did not include any question of the removal or attention of Chief Croker," said the mayor. "There is nothing in the talk of removing him. I want the people who are writing to me about the alleged attempt to ask the chief from the department to understand this."

Fire Commissioner Waldo is still holding the reports of the board of inquiry, and at last reports had nothing to say.

HERE AND THERE.

Edward E. Ryan of Boston has been appointed assistant actuary in the State Insurance Department for service in the New York city branch at a salary of \$3,000 a year. Mr. Ryan is at present State actuary of Massachusetts, and as such has charge of the savings bank insurance of that State.

James B. Brown, Jr., has been appointed Colorado general agent of the Detroit Fire and Marine Insurance Company, which recently applied for admission to that State.

The Prussian National Insurance Company is making arrangements to return to the city of San Francisco, from which it has been absent since soon after the earthquake.

The Federal Life Insurance Company of Chicago reports first year premiums collected by the company in cash during the first six months of 1910 to be about 50 per cent. more

than during the corresponding period of 1909; renewal premiums collected during the first six months of 1910 show an increase of about 60 per cent. over the first six months of 1909. Heavy increases are shown in applications received, policies issued and business paid for. President Hamilton congratulates the company upon the fact that some of the company's field force entered the employ of the company in 1900—the year of the company's organization. The Federal's field force is increasing rapidly and the company's prospects are excellent.

Webb & Skinner of Raleigh have been appointed North Carolina State agents of the Empire State Surety Company for fidelity and surety lines.

W. L. Nelson & Co. of Memphis have been appointed general agents of the Concordia Fire Insurance Company, which has just entered Arkansas.

The California State Insurance Department has issued a license to the recently organized Los Angeles Fire Insurance Company, which is capitalized at \$200,000. J. H. Richards of San Francisco has been made general manager of the company.

Arthur F. Saxton, an examiner in the State Insurance Department at Albany, has been promoted to be chief examiner at a salary of \$4,000 a year. He has been in the department twelve years, and is a son of the late Lieutenant Governor Saxton.

I. P. Mantz has been appointed actuary and agency manager of the Oklahoma National Life Insurance Company at Oklahoma City.

Milton S. Koblitz has been appointed superintendent of agencies of the Bankers Life Insurance Company of New York. He took the actuarial

course at the University of Michigan, and, just previous to this appointment, was in the service of the Pacific Mutual Life Insurance Company of California.

JURY CONVICTS PECK.

The Syracuse jury in the case of Williard H. Peck, former secretary of the People's Mutual Life Insurance Association and League, returned a verdict of guilty on a charge of perjury last Saturday. The charge was based upon the secretary's failure in his sworn report to the Insurance Department to include founders' contracts as a liability, while before the examiner in the investigation of the sale of the company to John Tevis he swore that he regarded the contracts as valuable. He received \$31,500 for these contracts.

On June 27 the jury in the first trial of Peck was discharged, being unable to agree. It stood 11 to 1 for conviction.

The court announced that he would continue Peck's bail until July 25, when sentence would be passed. He indicated that he would grant a certificate of reasonable doubt. The attorneys for the convicted man said that would prepare an appeal at once.

Decides Against Royal Arcanum.

SUPREME COURT JUSTICE WILLIAM J. KELLY of Brooklyn handed down a decision last Friday, in which he held that the Supreme Council of the Royal Arcanum could not raise its assessment rate without permission from the members of the organization.

The case is not as far-reaching as it looks on its face. There have been two similar decisions in this State—Dowdall v. The Capital Mutual Benefit Association of New York, and Wright v. The Knights of the Maccabees of the World. The Capital is the New York concern and the Maccabees involved a citizen of New York. The Royal Arcanum is a Boston concern and has obtained a decision from the highest court of Massachusetts upholding its rights to raise its assessment rates.

What Justice Kelly did was to apply the New York court decision in the Capital and the Maccabees cases to the Royal Arcanum in this State. His decision gives a present member no right of action unless he has paid the increased rates under protest ever since the change was made. It would prevent future increases, however, as members could combine and enjoin such further increases.

The Royal Arcanum case was brought by Samuel Green, of Brooklyn, who is a member of the De Witt Clinton Council R. A., and who at one time held one of the highest positions in the council.

Green, who is about 62 years old and a lawyer, joined the order in 1883, at which time he agreed to pay the regular assessment of the order, namely, \$1.80. In 1898 the number of assessments was changed so as to be one a month, and the rate was raised to \$3.16. The plaintiff agreed to this change. But when the council in 1905 increased the rate to \$6.80, Mr. Green objected, and has been paying under protest ever since. In February, 1910, he sent a check for \$3.16 to pay an assessment then levied, and it was refused. He thereupon began suit in the Supreme Court, Brooklyn, before Justice Kelly for an injunction to restrain the Royal Arcanum organization from suspending him and asking a judgment establishing the \$3.16 rate as the fixed amount to be paid by him. It is said that it was the intention of the council to again increase the amount of the plaintiff's assessment, so that it would be between \$16 and \$17 for each assessment when the plaintiff reached 65 years of age in a year or two.

In deciding in favor of the plaintiff

Justice Kelly declares that the society cannot assume an unlimited reserved power to increase the amount of assessment to an extent which might be prohibitive and could only result in depriving the individual of his membership. The court also finds that any agreement upon the part of a member at the date of his admission to be governed by the law and regulations of the organization then in force is not sufficient to warrant the society in increasing the amount of individual assessment. Justice Kelly holds that clearly no bargain was made or contemplated by the council when Green joined the order whereby the society might increase the premium to any amount.

The court holds that although the Supreme Council of the Royal Arcanum is a Massachusetts corporation, still when it comes into the State of New York, conducting business here under the supervision of the State Insurance Department, contracts made here with residents of this State in councils organized and existing in this State and to be performed here are to be interpreted under the laws of the State of New York.

Judgments, with costs, is awarded to the plaintiff.

The Pacific Coast Fire Insurance Company of Vancouver, B. C., has increased its capital from \$250,000 to \$500,000. The company is now writing surplus risks in the United States, and after the increased capital is paid

in proposes to enter for a direct business under the management of the Peoples National Fire of Philadelphia.

Willard L. Chambers has been appointed assistant secretary of the United States branch of the Sun Insurance Office of London.

A FEW GENERAL AGENCY DISTRICTS OPEN

British Insurance Institute.

IN view of the increasing interest in this country in the formation of insurance institutes, THE CHRONICLE believes that the proceedings of the fourteenth annual conference of the Insurance Institute of Great Britain and Ireland, at Royal Hotel, College Green, Bristol, England, on June 10, will make an appeal to those interested in the promotion of similar institutes here.

The following account is taken from the "Insurance Guardian" of London:

The president, S. Stanley Brown, general manager of the Employers' Liability Assurance Corporation, was in the chair, and about one hundred delegates from all over the country were present.

The following resolution was passed:

"That this conference of the Insurance Institute of Great Britain and Ireland records its deep regret at the death on December 14 last of Thomas A. Bentley, and its appreciation of the many years invaluable work he has given to the Institute of Manchester and the Insurance Institute of Great Britain and Ireland, which has been of the utmost value on their councils, and which has left amongst his brethren a feeling of warm and lasting regard, and that a record of this be entered on the minutes of the conference, and be conveyed to relatives of deceased."

The report of the council detailed the steps taken with a view to obtaining the grant of a Royal Charter for the institute. In regard to the annual examinations, held simultaneously in 31 different centers, the entries had far exceeded those of any previous year. The number of candidates was 904, as compared with 699 in 1909; the number who actually sat was 804, and the total papers returned numbered 2,856. The ordinary examinations are now open to clerks in every insurance office without distinction. With a wider field and the increasing popularity of the accident branch there is every reason to believe that the number of candidates next year will show an even greater increase.

While the accounts of the past year are satisfactory, showing an increase both of revenue and balance, it is evident that the ever-growing scope of the institute will require additional funds for its efficient administration. The Insurance Clerks' Orphanage, so closely associated with the institute, continues to prosper. The eighth annual report shows that the funds now amount to £16,947, an increase of £1,793, and 40 children are now supported and educated at a cost of £913. Twelve entertainments and special collections were given in aid of the funds of the orphanage, and two insurance companies were added to the list of contributors during the year.

The president's address was as follows: "As we have now paid our mark of respect to a departed friend, and have accepted the report and accounts for the past year, it falls to the lot of your president to amplify and reinforce the report as it has been submitted. I notice that information is not given on the two following points, which I now supply. The number of local institutes is 18. The number of members of the institute is as nearly as possible 4,000.

"I notice that there is no mention made

in the report of the Assurance Companies Act, 1909. I regret the omission, because I think that act is a matter which might very well have been considered during the past year by the representatives of the institute, and I take some blame to myself in this, because I think the omission is due to my own neglect. In noticing this act I do not propose to go through it clause by clause, because that no doubt has been done by yourselves, and certainly has been done, and well done, by some of the insurance papers. I rather want to invite your attention to some broad considerations in connection with this act.

"The inception of the act was not due to any movement on the part of the companies, either tariff or non-tariff. It was not due to any recorded complaints as to the methods of the companies. It was not due to any meeting hostile to the action of the companies, and we are therefore driven to the supposition, which I believe to be the fact, that the inception of the act was due to the Board of Trade, who desired to apply legislation similar in principle to that contained in the Life Assurance Companies Acts of 1870 on onwards, and in the Employers' Liability Insurance Companies Act, 1907, to all assurance companies. The result of the proposition of the Board of Trade was to bring them into conflict with the great institution of Lloyd's, and with the Associated Fire and Accident Offices. The contending interests and

their effect are well set out by a writer in the 'Times' of October 1, 1909, as follows:

"It is common knowledge that the note as originally drafted contained no exceptions, and that the exceptions were inserted under a threat of organized opposition to the bill from the great fire companies which also transact accident and employers' liability business, and from the companies which transact those classes of business alone. The Board of Trade made the concession rather than lose the bill, especially as it gave them an opportunity, of which they took advantage, to buy off the opposition of the great fire companies to their proposals in regard to the regulations of Lloyds. In return, Lloyds Underwriters agreed not to make difficulty for the fire companies, or to oppose the bill generally."

"Now, the act gives effect to the results of this controversy, and the results of the conflict are that the fire and accident associations have been successful in their contention that they should not be compelled to separate their United Kingdom business from their foreign business, nor to state separately what are their funds and deposits abroad as distinguished from their United Kingdom business. The institution of Lloyds has secured exemption from the act for their fire and accident business on the easy terms set out in the eighth schedule to it. The Board of Trade has failed of its object in making these concessions, and in so far and for the time being has submitted to a diminution of the safeguards they were desirous of securing for the United Kingdom policyholders."

"I think, gentlemen, we may rest assured that the Board of Trade will seek to amend their present legislation by extending it to secure these safeguards which they have now failed to get. One of their first objects will be to secure full protection in respect of re-assurances given off to companies that do not carry on their business within the United Kingdom. Another amendment they will probably look for will be to insist upon marking off certain funds as security for the United Kingdom policyholders, and so destroy to that extent the use of the free fund offered by the unfettered accumulations in this country. When the future consideration of these amendments comes about I believe that this institute should be interested in that consideration and should be consulted in the arrangement for the proposed new legislation. In the meantime I offer these suggestions as to the Assurance Companies Act with a fairly certain conviction that in the future, after a short or long distance of time, the matter will be brought to you for consideration."

The Proposed Charter.

Another matter in the report which I desire to amplify for your information is that part which is connected with the petition for a charter. In doing this I call attention to the fact that my appointment as your president was due to the desire that an accident man should be interested in this way in the business of the institute, and when I accepted the honor of becoming your president I was very conscious that, not being familiar with the fire business—which is the predominant interest in the institute—I could not offer you any useful suggestions in connection with the details of the transaction of that business. I, therefore, looked around for some method by which

I could make my year of office of advantage, and I learned from the statements of your past presidents—and particularly from the admirable forecast of our future delivered by Mr. Ostler when he was in this position of president—that there was a very earnest desire that a charter of incorporation might be granted to this Institute. At the same time, I became conscious that there were difficulties with two or three of the local institutes, and there were also difficulties as to companies not included in the associations. It was very clear that, without getting round these difficulties, it was of little use to present a petition with any hope of success. There followed then many meetings with local institutes and other representatives, and these went on with varying success, but without resolving the difficulties. With the approval of the executive of the council, a meeting was called at York in order, if possible, to resolve these difficulties, and was held in that city on March 4, 1910. There the principles were laid down upon which I and the executive were authorized to proceed, and to assure you that these principles have been followed out I venture to read to you the following resolution of the York meeting:

"Resolved unanimously that in applying rule 8 (a) it shall be understood as an interpretation thereof that each local institute shall retain their liberty to elect as members persons connected with the insurance business, whose election, in their opinion, would conduce to the interests of the Insurance Institute of Great Britain and Ireland in the locality."

"With this I ask you to compare paragraph 12 of the petition, which read as follows:

"12.—Each local institute has had and retains the power to elect as members persons connected with the insurance business, whose election, in their opinion, would conduce in its own locality to insurance interests as now represented by

'The Institute.' All the members of the local insurance institutes which contribute on a specified basis to the funds of 'The Institute,' thereby become members of 'The Institute.'

"The resolution of York and paragraph 12 of the petition reaffirm what I may call the 'primal charter' of this institute, which is that the first election of members rests with the local institute, as it has always done, and, as I think, it always will. I then ask you to go on to the consideration of York resolutions Nos. 6 and 7, which were carried by a large majority at that meeting:

"No. 6.—Resolved that, subject to terms to be approved by the council of the institute, every admitted member of the Insurance Institute of Great Britain and Ireland may be examined, subject to the limitation in No. 8, and, if he pass, may receive a certificate.

"No. 7.—Resolved that on terms to be approved by the Council of the Institute every clerk in the employ of an insurance company, whether or not a member of a local institute, may be admitted to be examined and certified.

"With these I desire to compare paragraph 15 of the petition, which reads as follows:

"In addition, your petitioners have so improved and extended the system of examination and certificate as to make it co-extensive with the whole number of persons employed by the assurance companies. This is a most important addition to the usefulness of 'The Institute,' since by reason of youth, want of means, distance and general local conditions, a very large number of officials and clerks (presumably about 20,000), forming a considerable majority of the whole number engaged, are prevented from taking advantage of the membership of the local institutes. To every one of these is now offered the opportunity to be examined and secure a certificate.

"You will see that these are identical in object and effect, and they are both concerned in extending to every clerk of every insurance company the benefit offered by this institute of examination and certificate. Up to this point we have now got over our difficulties. Another one remained, as to what is called 'tariff business,' and the executive and myself having come to a conclusion of that matter, submitted the following resolution, which was carried mem. con. at York, and is No. 8 in the minutes. That resolution runs as follows:

"Resolved mem. con. that, whereas certain offices have collated information for their own private use and benefit, the subjects contained in such private information will not be included in the general subjects of examination, but may be proposed as the subjects of a separate examination to which only persons in the employment of the offices contributing to such private information will be admitted on terms to be approved by the council of the institute.'

"Now, gentlemen, this is a special resolution affecting the fire offices only. When we come to the consideration of the same idea in the petition, which is found in paragraph 13, we lay down the same proposition as the basis for your charter, but in general language, so that it may include the fire offices committee or the Accident Offices Association or any recognized association of offices which shall satisfy the requirements of the by-laws in respect of capital and premium. That clause runs as follows:

"Your petitioners are prepared to con-

duct separate examinations in, and give special or distinctive certificates for, certain subjects to be excluded from the general examinations above mentioned. Such subjects are connected with insurance, and are usually known as 'Knowledge of Tariffs.' They deal with private matter and records collated by insurance companies at their own expense and for their own use and benefit. Only the officials and clerks employed by the assurance companies contributing to the collation of such matter and records will be admitted to such examinations or be qualified to receive such certificates.

"This examination shows that we have followed absolutely the principles laid down in the York resolutions.

"Well, we are sometimes asked, 'What is the justification for a charter?'—and the short answer is 'the importance of insurance business'; and that you may use this answer with confidence I submit to you the following reflections. I submit that assurance is of importance actually for the following reasons, which are incorporated in the petition:

"1. There are at present incorporated under the laws of the United Kingdom at least 470 insurance companies. These companies transact their business not only at their registered offices, but also as branch offices established in the United Kingdom, in the colonies, and in foreign countries. It is computed that in the United Kingdom, in the colonies, and in foreign countries there are 1,900 registered and branch offices so established, and that the number of persons employed in registered and branch offices is 25,000 or thereabouts.

"2. The capital of the 470 companies is set out in the following statement: Total authorized capital exceeds 123,000,000 sterling. Total subscribed capital exceeds 94,000,000 sterling. Total paid-up capital exceeds 20,000,000 sterling.

"3. It is impossible to set out full particulars of the business of all the companies, many of the smaller being very limited by locality, range and objects, but an examination of the more important companies furnishes the following financial results:—of 230 companies so examined—The aggregate total income exceeds 82,000,000 sterling. The aggregate total reserves exceed 400,000,000 sterling.

"But insurance is not only of actual importance, but of importance in relation to other undertakings. I cannot compare it with the cotton, iron or steel industries, nor with banking enterprise, but we are able to compare in a sense with the shipping industry of this country, because we can use the estimate of the late Sir

Robert Giffen to the effect that the purchasing power of the shipping industry was about £100,000,000 per annum. Now that, gentlemen, I take to be about the amount of the premium income of all the insurance companies per annum. There is another great industry of the country with which we compare very favorably. The income of the railways is about 120,000,000 a year, so that we stand in the proportion of five-sixths of the income of that great industry. Another comparison is that against our £100,000,000 the amount expended on the services, including the army, navy and civil services, is about £90,000,000.

"Now these, gentlemen, are reasons which amply establish the actual and relative importance of insurance, and justify our going on with the petition for the charter, and I have now to report to you that the petition was lodged during the last month, and that it has been accepted for consideration by the privy council. In consequence of that incident there has appeared in the 'Gazette' a notice calling upon any person having an objection to lodge such objection on or before July 1, 1910. Since the petition has been lodged a difficulty has sprung up to the effect that there might be opposition to the petition on the part of non-tariff offices, but in a conference with their representatives I was able to assert the principle of absolute equality adopted in the petition, and I quickly found that these companies did not want to wreck the petition, but were anxious only to see that they were secured in equal rights, and, therefore, they agreed upon advancing their right to consideration of what they demanded, and this can be fully and properly considered when the time comes for the construction of the by-laws.

"Now, gentlemen, after the lapse of time intimated by the notice in the 'Gazette,' the petition, if then approved, will have to lie before the two Houses of Parliament for a further period of thirty days, so that one cannot reasonably suppose that the charter can be granted before the end of this session. When it is granted there will follow the discussion of the by-laws, which you will accept in substitution for those under which you are now carrying on your business; but, until you have discussed these new by-laws and adopted them, you will be carrying on under the existing rules. Full notice will be given to you of the suggested by-laws, and you will have the

fullest opportunity of discussing them before they come into effect.

"Well now, gentlemen, I have supplied you with information upon the points raised in your annual report and also in respect to a matter which cannot fail to have an interest for you, and this brings me to the conclusion of one of my last duties as your president for the year. I cannot part from you without saying that since you did me the honor of electing me last year my acquaintance and friendship with you has grown, my intimacy with the members of the council has improved, and throughout the whole year I have had assistance and consideration, and a full and courteous reception wherever I have gone amongst you representing the institute, and your reception of me to-day adds to the great pleasure with which I have served you during the past year. It was a great honor to me to be elected, and it has been a happiness to serve, and I am sure in the years of my life that have still to come I can look forward to none more happy and pleasant in my business, nor more hooned in my connection with you, than the year we are now closing."

F. W. P. Rutter, general manager of the London and Lancashire Fire Insurance Company, was elected president for the ensuing year, and James Ostler, Manchester secretary of the Northern Assurance Company, hon. treasurer in the place of the late T. A. Bentley.

Grahame H. Wills, the popular president of the Insurance Institute of Bristol, entertained the delegates and friends to luncheon, after which the delegates were photographed.

The reports submitted included one on the results of the examinations held in April last, and from this it appeared that the following candidates (in addition to those mentioned in the previous reports) have now passed in all the subjects comprised in

THE TEXAS TANGLE.

A good summary of the Texas tangle is given by "The Insurance Vindicator" of New Orleans, in its issue of July 5, as follows:

The old story about leading the horse to water but not being able to make him drink is exemplified in the insurance situation in Texas at the present time. As a result of complaints of rates which caused such a row in the Lone Star State a few weeks ago, the State Fire Rating Board made sweeping reductions of 25 to 30 per cent. and the companies were given to July 5 and then the time

was extended to July 11 to file amendments to their basis schedules. Most of the companies have filed their schedules in accordance with orders, but have instructed their agents to cease writing business on risks affected by the lower rates claiming that they would be doing business at a loss.

Without giving the new law a chance Governor Campbell yielded to protests and called an extra session of the Legislature to abolish it. This session will be held July 19, therefore the companies evidently prefer to await the result of its deliberations before deciding upon their future course. In the meantime many merchants are without proper protection, the few companies that are writing business at the reduced rates not having the facilities to furnish the lines of insurance required. It will be some time before any new law or amendments can be effective, hence a great deal of concern is being felt by business men who must have insurance. The letter of the prominent Dallas agency of Trezevant & Cochran gives the attitude of the companies on the situation that has developed. It is one thing for men of limited experience in the insurance business to make sweeping reductions in rates but it is quite another to force men of technical knowledge and experience to invest their money unprofitably.

The latest development is the determination to fight the law in the courts.

Austin, Texas, July 20.—Governor Campbell recommended to the legislature, which met yesterday, in special session that a law be enacted prohibiting from doing business in Texas any fire insurance company of another State which withdraws or threatens to withdraw from Texas because of legislation of which it does not approve.

He also recommended the repeal of the existing fire insurance rating board law and the passage of a measure rigidly regulating fire insurance companies doing business in Texas. He specially urges that combination and discrimination on the part of the companies be prohibited.

LIFE POLICY TO APPLY TO INABILITY TO PAY.

A policy, the character of which should demand some attention in the United States, is being assured by the life office of the Phoenix Assurance Company of London, in which the cessation of the payment of premiums, during incapacity caused by accident or sickness, is the distinguishing mark. Business or professional men, entirely dependent upon the income derived by daily employment, are obviously in need, if anything prevents them from keeping a policy in force. Of course, there are surrender values, and loans on policies may be negotiated, but the

plan of the Phoenix is a safeguard against the contingency which may arise with anyone who lives always with a narrow margin between income and expenditure.

CHARLES H. STRAUSS, Gen. Ag't.
200 Fifth Ave., New York.

In New England.

THE Massachusetts Insurance Department has just completed an examination of the United States branch of the Employers Liability, as of September 30, 1909, and, as was to be expected, finds everything substantially O. K. The closing words of the report are:

"As may be seen from the foregoing financial exhibit, the affairs of the corporation are in a very flourishing condition, and the record of its management is reflected in its progress during the ten years ending December 31, 1908, within which time the United States branch has remitted to the home office \$1,122,956.49 net, while the surplus to policyholders during the same period has increased from \$333,959.50 to \$1,949,338.63. The premium income increased from \$1,404,719.73 in 1899 to \$3,678,037.98 in 1908."

And it may be added that for 1909 the United States branch reports surplus to policyholders, \$1,911,981.99, premium income, \$4,133,933.81.

A Lightning Fire and Its Lesson.

The June bulletin of the Boston Manufacturers' Mutual Fire Insurance Company tells of a fire in the Shove cotton mill plant at Fall River, Mass., caused by lightning which struck the north end of No. 2 mill, starting the fire, from which the following is extracted to one bay. Thirteen sprinklers opened, and the fire and water damage ensuing to machinery and stock were estimated at from \$8,000 to \$10,000. The electrical inspector of the insurance company made a report of this fire, from which the following is extracted:

"The trouble within the mill appears to be due entirely to the bound earth charge on the electric wiring caused by the lightning. * * * * The trouble did not take place on circuits supplied with current by the public service company. All the trouble was on the mill circuit.

"The watch-clock wires extending between Nos. 1 and 2 mills entered two channel wood molding immediately upon entrance to the No. 2 mill and extended in this molding to the ceiling. At that point twin conductor wires were soldered to the single wires and passed to watchman's boxes in single channel molding. The static appears to have caused considerable difference of potential between the two watch-clock wires, which caused a breakdown of the insulation of the twin conductors. A spark where the breakdown occurred evidently was the

cause of the fire at the north end of the mill.

"The lesson from the fire is that telephone protectors should be provided at each end of the watch-clock wires extending between buildings. The wires are exposed for a considerable distance and are liable to be affected by lightning. It is very probable that if these protectors had been provided on the watch-clock wires sufficient difference of potential to cause the breakdown of the insulation of the conductors would not have occurred.

"The fire also shows that any mill having electric wiring not encased in grounded iron conduit, even although none of the wiring extends outside the buildings, is liable to experience trouble due to bound earth charges during lightning storms. There have been other instances of similar trouble occurring, but they are few in number. One or more lightning arresters connected to the wiring within a mill would undoubtedly afford some protection, but the presence of these arresters may give trouble themselves due to breakdown of the spark gap during normal conditions of operation. Owing to the fact that the number of cases where induced charges due to lightning have caused trouble are relatively infrequent, it is not thought necessary, at the present time at least, that lightning arresters should be installed on wiring which is entirely within buildings.

"The following recommendations are submitted:

"Approved telephone protectors should be installed at each end of the watch-clock wires extending between mills Nos. 1 and 2 at the points where they enter the buildings, and the public service company should be requested to install lightning arresters on the lines entering the buildings of the assured. The protector on the watch-clock wires should be grounded to the sprinkler piping, while the lightning arresters on the outside lightning wires should be grounded to underground water pipes if practicable."

New England Brevities.

The commission appointed by Governor Draper of Massachusetts to report to the next legislature a plan for compensating workmen injured in the course of their employment, was formally organized last Thursday. James A. Lowell is chairman of the commission and Amos T. Saunders is secretary. Both men have held positions of political trust and have studied law.

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,
takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

- Low premium rates.
- Large surrender values.
- Dividends at the end of each policy year.
- Thirty-one days of grace in payment of all premiums after the first year.
- Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.
- Loans for the full cash surrender value.
- Policy payable in one sum or in instalments for terms of years.
- Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.
- Right of the insured to change the beneficiary.
- Liberal re-instatement privileges.
- Every effort has been made to make this new policy the very perfection in a life insurance contract.

Agencies in all Prominent Cities & Towns.

Carroll W. Doten, professor of economics at the Massachusetts Institute of Technology, was appointed chief investigator for the commission.

At the annual outing of the Rhode Island Association of Local Fire Insurance Agents, held at the Pomham Club last Thursday, Joseph G. Henshaw was elected president for the ensuing year, James Gallivan first vice-president, G. T. Gamwell secretary and treasurer, and G. L. Gross chairman of the executive committee.

The Massachusetts Fire and Marine has appointed Ross E. Wickham of Newark as its State agent for New Jersey, and at Brooklyn, N. Y., it has appointed Alfred J. Hodson as its agent.

Horace S. Howe, for several years general agent of the United States Casualty, has purchased the local fire insurance agency of Edwin A. Treat.

The Supreme Court of Connecticut has handed down a decision affirming the finding of the lower court which awarded the Buffalo Forge Company \$29,449.49 in its suit against the Mutual Security Company. The last-named issued a policy to the forge company guaranteeing it against loss by strikes, and the award of the lower court was for a loss sustained during a strike which started a day after the policy was issued.

Companies intending to write health and accident insurance in Massachusetts under chapter 493 of the acts of 1910, have been informed by the insurance commissioner that they

must file copies of their intended policy forms in his office not later than October 1.

Fred Merchant, charged with having set fire to a three-story wooden tenement house in Auburn street, Chelsea, on May 25, was arraigned in the Chelsea court last Monday. After pleading not guilty to the charge of arson, he was held in \$10,000 bail for a further hearing. The house where the fire originated was protected by insurance, and the title thereof stands in the name of the sister of the defendant.

William P. White, mayor of Lawrence, Mass., was sentenced to a term of three years in jail and payment of a fine of \$1,000 for conspiring to bribe certain members of the board of aldermen of 1909 to act favorably in the matter of the removal from office of James A. Hamilton, chief of the fire department. Hamilton, who still holds the office, is under indictment for alleged bribery in securing confirmation of his appointment. It is expected that he will be placed on trial in September.

Among those who took part in the golf tournament at Bretton Woods, N. H., last week, were Darwin A. Kingsley, president of the New York Life, and Secretary Crocker of the John Hancock. While Mr. Kingsley was making "drives" for holes, the agents of the New York Life were engaged in making a special drive for July business, in recognition of their president's successful effort to broaden the law limiting the amount of new business.

D. H. ROSE A VICE-PRESIDENT.

At a meeting of the board of directors Douglas H. Rose, actuary of the Maryland Life Insurance Company of Baltimore, was elected vice-president. Mr. Rose will continue his duties as actuary.

INSURANCE BUSINESS

ATTRACTS PROMOTERS.

Some large totals as to the number of companies and proposed capital and surplus of new promotions in the insurance world, has been collated by the "Journal of Commerce and Commercial Bulletin." Of course, in the least, there are companies organized in the interests of professional promoters, working after large commissions for selling stock, but many of them are venturers of a conservative solid sort. The word magnitude of the volume shows what a solid basis of appeal to prospective stockholders the professional promoter has been able to find in the experience of the insurance business—fire, life and miscellaneous—as conducted in the United States. A table of the aggregate showing, since the first of the year, was given by the "Journal of Commerce" as follows:

Fire—No. of companies, 77; proposed capital, \$44,903,000; proposed surplus, \$30,355,000.

Life—No. of companies, 68; proposed capital, \$29,149,000; proposed surplus, \$6,756,000.

Miscellaneous—No. of companies, 84; proposed capital, \$52,740,000; proposed surplus, \$45,730,000.

Total No. of companies, 229; proposed capital, \$126,792,000; proposed surplus, \$82,841,000.

PRESIDENT AMONSON of the Peoples National Fire, who is now in the West, is looking into the Pacific Coast situation with the intention of reorganizing his arrangements there so as to comply with the rule against dual general agencies.

Fred S. James & Co. will have the management of the North German of Hamburg for the United States. The company retired from this country several years ago, but will enter the field again.

Superintendent Hotchkiss has admitted the Michigan Millers Mutual Insurance Company of Lansing, Mich., to do business in New York State.

At a meeting of the Suburban Fire Insurance Exchange on Tuesday, a motion was made to refer to the executive committee the question of whether or not to abolish the brokerage department including rules regulating brokers and the certified list of brokers. It was overwhelmingly voted down.

The annual baseball game between teams representing the Boston and New York fire departments was played last Saturday afternoon at Bronx Oval, and as usual the New York fire laddies won by a score of 6 to 5.

Four thousand persons were on hand to see the game, and the Boston notables who witnessed the game were Francis M. Carroll, acting fire commissioner, Medical Examiner Sprague, Chief Veterinarian Kehoe and Water Commissioner Daly of Brookline, Mass. The big fellows of the New York department showed up in great numbers. Commissioner Waldo stayed

away to keep an eye on the "Big Chief," who was busy protecting the Old American Line pier, while the Old Red Star Line pier was burning. Captain Truesdale of the Boston team stepped to the plate at 3:30 o'clock to start the ball rolling, but Spillane, who tosses them over for the New York laddies, kept him guessing and he tried so hard that he fanned. The next batter also struck out and the third was thrown out at first.

Despite the pitching of Spillane, who struck out twelve men during the game, Boston succeeded in breaking the ice in the next inning and scored a run. They followed up this advantage in the fourth by adding two more, and Captain Potter, manager for the New Yorkers, paced up and down past the scorer's bench with a most woe-begone face. In New York's half of the fourth, however, Finn, the Boston twirler, became unsteady and gave two bases on balls, which, with three hits and an error, netted the home nine four runs. Another was added in the fifth and the score remained 5 to 3 in New York's favor until the eighth, when Boston garnared one. In the ninth the Hub men made another and the score was tied. Power's hit in the last half of the ninth, following an error and a single by Fitzpatrick, brought in the winning run. The score by innings follows:

New York.....0 0 0 4 1 0 0 0 1—6
Boston0 1 0 2 0 0 0 1 1—5

Batteries—New York, Spillane and Wollfie; Boston, Finn and Dunn.

After the game the New York players gave a dinner for their rivals at the West End Cafe, in West One Hundred and Twenty-fifth street. Acting Commissioner Carroll, of Boston, and Deputies O'Keeffe and Johnson of New York were the principal speakers.

USES.

Computing Annual Term Insurance Premiums:
 Divide temporary insurance values by immediate temporary annuities.
 Computing Annual Endowment Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.
 Computing Annual Pure Endowment Premiums:
 Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
 By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
 Computing Annual Semi or Double Endowment Premiums:
 Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
 Computing Limited Premiums:
 Divide the proper single premiums by immediate temporary annuity.
 Computing Surrender Values:
 Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
 Extended Insurance with Fractional Paid-up Endowment:
 Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
 Computing Terminal Reserves:
 Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
 Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
 Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
 Warranted Commissions for New Business.
 Surrender Values.
 Dividends.
 For these purposes the "select and ultimate" will be most useful.

MAY DOUBLE LIABILITY RATES.

Forty Underwriters Still in Session Because of Conditions Created by the New Laws in This State.

ABOUT forty liability underwriters met yesterday in the offices of the United States Casualty Company to act finally on policy forms, premium rates and commissions, with respect to the Wainwright-Phillips employers' liability laws.

The committee of five attorneys appointed at last month's meeting, "to consider the new compulsory compensation law and make a report to the companies, expressing their opinion: First, as to the constitutionality of the law; second, as to its scope with reference to the various classes or kinds of work," reported in part as follows:

"We have serious doubts as to the constitutionality of the 'act to amend the labor law in relation to workmen's compensation in certain dangerous employments,' but are of the opinion that the companies in the transaction of liability insurance in the State of New York should assume that this act will be sustained by the courts, and act accordingly."

The meeting of the liability insurance companies was called to order at 10 o'clock in the morning, with C. H. Franklin, United States manager and attorney of the Frankfort Marine, Accident and Plate Glass Insurance Company in the chair, and A. Duncan Reid, executive superintendent of the Ocean Accident and Guarantee Corporation, acting as secretary. The meeting lasted until late last night and adjourned to meet again at the same place at 10 o'clock this morning.

It was evident that the underwriters

avored the plan that the brokerage commission for "compulsory" and "permissive" insurance should be limited to 5 per cent., and that the commission on general liability insurance should not, after September 1, go beyond 15 per cent.

Premium rates were under discussion when the meeting adjourned last night, and there can be no doubt, from the reports of the committee, which has been in almost continuous session for several weeks, that the premium rates for liability insurance must be increased and, perhaps, even doubled.

Aetna Life Statement.

J. Scofield Rowe, secretary of the Aetna Life, recently sent the following statement to agents and brokers:

"There were two laws passed at the last session of the New York Legislature that are not only of vital importance to all employers of labor, but also to all companies and agents or brokers writing liability insurance. We desire first to direct your attention to the employers' liability and optional compensation law, chapter 352, entitled 'An Act to Amend the Labor Law in Relation to Employers' Liability.'

"The first three sections of this law, viz. 200, 201 and 202, as amended, have materially extended the former common law and statutory liability of the employer for injuries to employees, and we call particular attention to section 202 which, you will observe, has shifted the burden of proof as respects contributory negligence from the employee to the employer. It is generally conceded by those who have given this new liability law careful study,

that its effect will be to increase the cost of employers' liability insurance on all lines of business in New York State from 75 to 100 per cent.

The optional compensation feature of this law is covered in sections 205 and 212 inclusive and simply provides that any employer and employee may enter into a contract whereby the employee waives his statutory or common law rights in case of accidental injury, and in lieu of which the employee agrees to pay certain stipulated amounts, in accordance with the schedule of compensation provided in section 207 of the law, to said employee if injured in the regular course of his employment.

"In our opinion this optional compensation plan will not appeal to very many employers of labor, for the reason that its operation is surrounded by too many legal requirements, and the schedule of compensation which the employer must grant in consideration of the employee giving up his common law and statutory rights is so liberal as to make the cost of insurance thereunder appear excessive as compared with the cost of insurance for a straight liability policy. There will of course be some employers who will give the plan consideration. However, we believe that after they have compared the cost and observed the fact that a separate contract must be made with each employee, acknowledged by a notary public, and a copy filed with the county clerk, very few indeed will undertake to incur the expense and trouble of giving the plan a trial.

"We now desire to call your par-

icular attention to chapter 674 entitled, 'An Act to Amend the Labor Law in Relation to Workmen's Compensation in Certain Dangerous Employments.' We believe this is the first compulsory compensation law of any character to be passed in the United States, and while it is somewhat limited in its scope the principle involved is one of vital importance to the business interests of the State of New York and in fact of the entire country. It was the apparent purpose of the lawmakers in framing this law to avoid as far as possible imposing any special tax upon the manufacturing industries in the State whose business is affected to a greater or less extent by competition from similar industries in other States.

"The law has accordingly been designed to apply only to 'certain dangerous employments' in connection with building and construction operations and the conduct of public service corporations. There are some who believe that this law will be declared unconstitutional on the ground of its being class legislation, and while there may be some cause for apprehension on this point much will depend upon the interpretation of the law by the courts as to whether same is upheld. You will observe that the schedule of so-called dangerous employments, section 215, is very indefinite and leaves much to be conjectured as respects many employments that may be indirectly involved although not specifically mentioned.

"In view of the fact that this law creates a new liability for compensation for all injuries sustained in certain employments, regardless of the question of negligence, and preserves at the same time all liability for damages under existing laws, it will be observed that a very clear distinction is made as between the compensation which the employe may claim under this act and the damages which he may claim under existing common

law or liability statutes. It is therefore obvious that existing liability policies do not cover the compensation provided under this law, and in order to avoid any misunderstanding on the subject between the company and its policyholders we shall within the next few days mail direct to all employers' liability and contingent policyholders for whom we are covering risks in the State of New York a formal notice to this effect as per copy enclosed herewith.

"The new liability of employers as created by this compulsory compensation law will for the present be covered only by endorsement attached to the regular liability policies and for which a suitable additional premium will be charged. Rates for this additional compensation coverage, however, will not be ready until after August 1.

"We expect within the course of a few days to mail you a list of the policyholders which you have with this company to whom the notice referred to has been sent, and in the meantime we suggest that you make a very careful study of these new laws, particularly chapter 674 providing for compulsory compensation in 'certain dangerous employments,' so that you may be able to negotiate promptly with your policyholders for such addition protection as they may require."

What Weed & Kennedy Say.

The attitude of brokers is shown by the following letter, sent out within the week by Weed & Kennedy:

"Two laws relative to employers' liability to their employes, passed at the latest session of the New York Legislature, are novel in this country, and, indeed, revolutionary. Several conferences of liability underwriters, sometimes together with as many as ten lawyers, specialists in such practice, have been held, but the situation created by these new acts is so entirely strange and menacing that the companies are not yet able to announce what course they will feel compelled to adopt toward employers in need of policies of indemnity for injuries to their employes.

"One thing is indubitable—the charge for this sort of insurance in 'dangerous occupations' must be very greatly increased; and, that the number of occupations that are declared by the new law to be 'dangerous' is greatly multiplied. For example, 'construction, operation, alteration or repair, of wires, cables, switchboards, or apparatus charged with electric currents' are pronounced 'dangerous occupations.' This makes the repair of your front door bell or the operation

of your telephone a 'dangerous occupation.'

"There are many other things that will need discussion, which, however, it is not yet time to call your attention to, as the new act does not take effect until the first of September and the conferences being held by the managers of companies and their legal counsel may clarify the situation. The moment those conferences have resulted in declarations by the companies you shall be informed.

"Perhaps we should add that at present no company will quote rates for insurance of compensation to employes for damage incurred in the employments declared to be dangerous under the new law."

THAT LEGAL FEE.

In the "Journal of Commerce and Commercial Bulletin" on Monday the following appeared:

"The New York Board of Fire Underwriters Committees on Finance and Laws and Legislation promptly decided to have nothing to do with the bill for \$10,000 for legal services rendered the insurance brokers of New York. The reply of the committee is of a nature to indicate that the opportunity to pay the bill was unappreciated. It is intimated that the bill has been reduced to \$7,500."

The National Surety Company opened its new "brokers' branch," at 71 William street, yesterday. The branch will be in charge of Joseph C. Cockey, as manager, and John B. Murphy as resident vice-president.

EMPLOYERS' LIABILITY HERE AND ABROAD.

Written for THE CHRONICLE.

By P. TECUMSEH SHERMAN.

Former Commissioner of Labor of New York State.

HERE being a great deal of misunderstanding of the European system of employers liability (a first step towards the adoption of which has been made by recent legislation in New York—Laws 1910, Ch. 674), I have tried, in the following lines, to make a condensed comparison between the principle upon which that system is based and the corresponding principle or principles of the American law.

Injuries to employes in industry are due principally to the following causes: (1) Negligence or fault of employer. (2) Negligence or fault of employe injured. (3) Negligence or fault of a fellow servant. (4) "Trade risks." According to the common law (which, with many minor modifications by statute, prevails generally throughout the United States) an injured employe is entitled to relief from his employer only for injuries due to the first of these four causes,—i. e., the fault of the employer—in which case (subject to certain conditions) he is entitled to full money damages sufficient to repay him his financial losses and to solace him for his sufferings. For injuries from accidents due to the three other causes injured employes are entitled to no relief from their employers.

This latter rule is just so far as it applies to accidents due to the fault of the injured employes themselves; but as to accidents due to the fault of fellow servants or to trade risks it is unbearably hard; for accidents due to these latter causes constitute the bulk of accidents in our modern organized hazardous industries.

A well known Austrian experience

table attributes 70 per cent. of accidents in factories to trade risks alone. The German figures are classified according to "preventability," but, when analyzed, indicate only a slightly lower proportion of injuries to be due to trade risks. We have no adequate statistics in America, but my studies as Commissioner of Labor of this State, based upon information and advice received from the factory inspectors, lead me to about the same conclusion as to our factory accidents. Railroad experience shows a high proportion of injuries in transportation to be due to faults of fellow servants.

The general conclusion, therefore, is that the large majority of injuries are due to trade risks and to faults of fellow servants, and to no moral fault of the employers or of the employes injured. Adding the proportion due to faults of employers (which is difficult to estimate), the proportion due to no moral fault of the employes injured becomes overwhelming—it is variously guessed at between 70 per cent. and 87 per cent. A rough estimate also indicates that over 90 per cent. of the victims of serious accidents in industry are grown men; and presumably a large proportion of them are heads of families. Only a small proportion of them are insured and only an insignificant proportion are adequately insured; and in fact very few are able to insure themselves.

Taking any reasonable estimate of the numbers killed and disabled in our hazardous industries and the smallest calculation of the proportion of accidents due to causes other than the faults of the employers, the number

of persons who would be annually reduced to destitution by accidents in our industries, if the theory of our law were really carried out in its administration, will appear enormous. But the theory of our law is not carried out in practice. We, therefore, find distinct theoretical and practical objections to it, the more vital of which are as follows:

1. The exemption of the employer from all liability to an injured employe where the accident is due to the fault of a fellow servant, is an exception to the general law of agency. If my servant negligently injures a stranger I am liable; but if he so injures a fellow servant I am not. Why the distinction? The legal profession is divided upon the soundness of this distinction. The objection to making the employer liable under our law of negligence in such cases, is, that he would be made liable for a wrong where he has been guilty of no wrong. The European laws avoid this difficulty by making the employer liable, not for full damages as if for a wrong, but for a moderate and limited amount as an insurer.

2. Our law imputes to the employe the assumption of the ordinary risks of the employment, and thereby frees the employer from all liability for accidents due to trade risks. This rule is based upon the theory that the workman is free to accept or reject a specific employment and that if he chooses to accept employment in a dangerous occupation he should logically be deemed to have freely assumed its risks. This theory is true in individual cases; but when applied to the working people in the mass it hides a great economic fallacy. The

millions of working people in our dangerous industries are not economically free to leave their hazardous employments in a body and to seek non-hazardous employments. They must continue at their work or starve. Therefore this so-called free assumption is really an arbitrary imposition by law of the principal physical risks of industry upon one class only—and that class is the class least able and, in fact, absolutely unable to bear them. The old theory that wages in dangerous occupations are higher on account of and in proportion to the increased risk by absolutely contradicted by facts.

3. The great practical objections to our law is that it is not and cannot be administered according to its theory; because every case requires the determination of the question of negligence; and what constitutes negligence is undefined and undefinable and is a subject of radically differing opinions between judges, juries and experts. Every case, therefore, is subject not only to the uncertainties, difficulties and delays common to ordinary litigation of questions of fact but also to a mere gambling chance of what particular opinion of negligence will finally be applied in determining the result.

My own investigations, based upon a rather small number of specific cases, leads to the conclusion that the chances of the injured workman's recovering legal damages by action at law depend little upon, and are in no degree proportionate, to the theoretical merits of his case.

This conclusion is well summarized in the recent report of the New York Commission to Investigate Employ-

ers Liability, as follows: "The present system in New York rests on a basis that is economically unwise and unfair, and in operation it is wasteful, uncertain and productive of antagonism between workmen and employers."

The European laws avoid the defects of our laws by basing the liability upon an entirely different legal principle, called "compensation." The employer is made liable to his workmen for all injuries received in the course of the employment (with some varying exceptions, generally where the workman has been guilty of serious and wilful misconduct). This liability is not dependent upon the employer's being at fault in any way and is not, like our liability for negligence, for full and unlimited damages, but is approximately that of an insurer against all the risks of the business to a limited and moderate amount, calculate generally to cover about half of the probable financial loss to the victim or his dependents caused by those risks. The economic principle underlying this liability is that industries should pay for lives and limbs destroyed just as they pay for coal consumed and machinery worn out; and therefore that the financial losses from injuries should be divided between those who profit from the industries—i. e., between employers and employes—to effect which the employers should pay their share of the losses to the injured workmen. The European laws differ widely in their application, methods and details. Some apply only to comparatively hazardous and organized industries; while others extend to nearly all employments. Some make the employer

simply liable for compensation; while others require that he insure the payment of the compensation. Some leave the employer liable for full damages in those cases where he is truly at fault; while others eliminate the question of negligence or fault almost altogether. In some countries the compensation laws are correlated with sickness and old age pension laws (to pay for which the workmen and the State contribute) while in other countries they are entirely independent. But whatever the incidents, the principle of liability upon which the European compensation or compulsory insurance laws are based is everywhere the same and is in substance as above stated. And it seems to be the unanimous opinion of these who have studied this subject broadly, having regard to the causes of accidents, the operation of law and the welfare of society, that the compensation principle is right in theory and beneficial in practice.

THOSE COTTON BILLS.

New York bankers on Tuesday adopted a plan in regard to safeguarding cotton bills which they will submit to foreign financiers at once. It is hoped that the details will be worked out in time for a committee to sail with them on Saturday's steamer.

After conferences held between railroad men and bankers at White Sulphur Springs, W. Va., the railroads agreed to certify the agents' signature, thus guarding against forgeries. The means of guaranteeing the shipment of the cotton still remains open, but it is expected that upon the return of John Gardin of the National City Bank, and W. B. Joyce of the Na-

tions, theories and philosophies, etc., etc., that are changing the course of human life? Are we not now living in an age of stirring events—in peace, dissension, war, in exploration, discovery, invention; in thought, theory, practise—things that the minds of future generations will read of with eager intensity? Where do you stand? What do you know of this world you inhabit, of those who inhabit it with you, and of the rapid march of its daily history? Reading world-history in the making, with its many unexpected twists and turns, is as stirring as the greatest novel, and yet positively nothing is more refreshing and valuable to the intellect.

Why Not Read Something of Value as Well of Interest?

The Literary Digest is more *vitaly interesting* to the average, thoughtful, busy man than the ordinary magazine, because it is with *things worth while* that The Literary Digest is constantly dealing. Each week it acquaints you with the news of the important movements of the world, gleaned from all publications, all arts, all brains, all industries, all sciences. The editors of The Literary Digest are provided with the best periodicals of the world, and each week they cull for you the best news and thought that these important publications contain. In brief, clear, entertaining form, The Literary Digest affords you each week precise ideas regarding every topic of current interest. Both sides of every question are carefully shown—absolutely without any partizan coloring—this is the editorial policy of The Literary Digest. You cannot afford to be without this valuable weekly.

SUBSCRIPTION PRICE: \$3 per year. Per Copy, 10 Cents, at all Newsstands.

44-60 E. 23d St., NEW YORK, N. Y.

Are you aware that The Literary Digest is about the most interesting periodical in the world to-day? It is *positively always interesting*! What is more intensely interesting and important than the stories of the many crises that have threatened the destinies of nations; or of the many discoveries and inven-

tions, theories and philosophies, etc., etc., that are changing the course of human life? Are we not now living in an age of stirring events—in peace, dissension, war, in exploration, discovery, invention; in thought, theory, practise—things that the minds of future generations will read of with eager intensity? Where do you stand? What do you know of this world you inhabit, of those who inhabit it with you, and of the rapid march of its daily history? Reading world-history in the making, with its many unexpected twists and turns, is as stirring as the greatest novel, and yet positively nothing is more refreshing and valuable to the intellect.

tional Surety Company from Europe, arrangements will be perfected to the satisfaction of the foreign bankers through a system of guarantees by surety companies. The foreign bankers in their demand that the American banking institutions guarantee the bills are acting in ignorance of the fact that the National banking act does not permit banks organized under it to guarantee bills of lading.

The reason why there is so much anxiety in the financial district over this matter of guaranteeing cotton bills is the dread of the possibility of shifting the financing of the cotton crop entirely to the banking resources of the country. Such a shift would add something like \$400,000,000 to the already heavy burden of the crop movement.

London, July 27.—The "Statist" suggests that a solution of the difficulty may be found in the willingness of the insurance companies, with an aggregate capital of \$13,000,000, to insure the genuineness of cotton bills of lading. American banks could insist upon such certificates being obtained by every seller of cotton and delivered to them, in which case they would not have only a bill of exchange and a bill of lading, but an insurance certificate likewise, which would adequately guarantee them, so that they could without risk give a full guarantee of European banks.

BRUCE AND MERRITT

TALK WITH HUGHES.

August 2 is the date on which the Merritt Investigation Committee will meet next. On last Monday evening former Justice M. Linn Bruce, counsel for the committee, and Assemblyman Merritt had a talk with Governor Hughes at the Hotel Astor.

In regard to this conference, Judge Bruce said he had been more than pleased to find that his views and those of Assemblyman Merritt were

in accord with those of the Governor.

"We did not map out any definite program of procedure. There are so many branches of this investigation that it is hard to say where we shall begin. We expect to make our report on June 15 next, and it will take all that time to complete the work."

The Judge also said that the committee would act upon matters suggested by the Allds-Conger inquiry, and the matters developed by Superintendent Hotchkiss in his investigation.

"But," he added, "we will take up any filed charges of graft at any time. They will not wait, but will be proceeded with immediately upon being received."

THE SOULKISS PROBLEM OF NICK BAREBONES.

Let ten Barebones alumni together with their lone star endman, Nicholas Barebones, be placed in the form of a parallelogram, and let Commissioner Soulkiss plus Miss Arabella Snowball Jackson constitute one diagonal and Elisha plus Swiftly the other diagonal of the parallelogram.

In addition to this, let the above named diagonals intersect each other at mahogany.

We are to prove that Commissioner Soulkiss is equal to Miss Arabella Snowball Jackson and also that Elisha is equal to Swiftly.

* * *

Now the diagonals of the parallelogram divide the whole figure into two large triangles and two small triangles. Let us consider only the two large triangles. For the sake of convenience name the upper triangle Darktown and the other triangle William Pine.

Now in the triangles Darktown and William Pine one row of Barebones alumni is equal to the other row of Barebones alumni, being the opposite sides of a parallelogram. Also the

above mentioned rows of Barebones alumni are parallel, for they are the opposite sides of a parallelogram. Furthermore these two rows of braces are cut by secants disfigured with \$10,000 items known as double entendres. Therefore, all the angles formed by the parallel lines and the secants are equal, for when two parallel straight lines are cut by a third straight line, the alternate interior angles are equal. Therefore, triangle Darktown is equal to triangle William Pine, for two triangles are equal in all respects, when they have a side and the two adjacent angles of one equal respectively to a side and the two adjacent angles of the other.

* * *

Then triangle Darktown is equal to triangle William Pine by proof. Therefore, Commissioner Soulkiss is equal to Miss Arabella Snowball Jackson and Elisha is equal to Swiftly, being mahogany sides of equal triangles.

Which was to be proved.

COMBUSTION CHEMISTRY.

"Chemistry of Combustion and Electricity" is the title of the latest volume issued by the Rough Notes Company of Indianapolis. It consists of two parts. First are given seven lectures on the "Chemistry Combustion," which were delivered before the fire insurance club of Chicago by O. C. Rochlitz, professor of chemistry in the Armour Institute. These lectures deal with fundamental definitions and laws, the atomic theory, chemical symbols, atomic waste, acids, bases and salts, the ionic theory and spontaneous combustion. The second part of the volume comprises six lectures on the subject of electricity, which were delivered before the same club by R. E. Blanchard, electrical inspector of the Chicago Board of Underwriters. They deal with the definition of electricity, the electrical inspector, outside and inside wiring, and potential systems.

Over \$2,000,000 to People's Mutual Certificate Holders.

JUSTICE ANDREWS, sitting at a special term of the Supreme Court in Syracuse, has approved the report of William H. Hotchkiss, Superintendent of Insurance, and has directed the payment of a first dividend of 60 per cent. to the certificate holders of the People's Mutual Life Insurance Association and League. This dividend will be paid by Insurance Department checks mailed to members at their home addresses. The issue of dividend checks will begin on August 1, and it is estimated that the work of making the payments to the 38,333 members will take about two months.

The Peoples Mutual is the fraternal insurance society which came into public notice in December, 1909, as a result of an attempt on the part of its board of directors to transfer the control of the society and of its \$3,000,000 of assets for a consideration of about \$150,000. At that time possession of the society was taken by Superintendent Hotchkiss under an order of the Supreme Court. The same court directed the liquidation of the corporation on March 3, 1910, and the officers appealed from this order. All appeals were withdrawn on April 11, 1910, under a settlement which involved the return to Superintendent Hotchkiss of the sum of \$150,000 which had been withdrawn from the society and deposited in a Canadian bank.

This is the first liquidation of a large insurance company under the new law requiring departmental administration instead of receiverships through court proceedings. A first dividend of 60 per cent. has been declared in less than four months, about \$2,000,000 of securities of various

kinds turned into cash, \$300,000 of matured obligations paid, and at a total expense of less than \$13,000, or about six-tenths of 1 per cent. of the amount now to be distributed. This expense includes \$4,664.71 for clerk hire, \$3,336.40 for postage, \$1,391.27 for printing and \$792 for rent. It has not been necessary to employ counsel, and the \$150,000 was recovered without litigation.

The report of Superintendent Hotchkiss shows that about two-thirds of the assets of the association have been converted into money and that \$2,174,441.92 is now available for the payment of the first dividend to members. The assets of the corporation including \$254,882.17 of disability loans paid to members, amount to \$3,229,614.43. Total of payments by present members to the association by way of monthly dues is \$3,413,833. It is thus evident that the assets of the association could not pay 100 per cent. to the members if the securities owned should bring the cost price. Owing to the fact that \$250,000 of corporate bonds still remaining unsold are in default for non-payment of interest, and others are not readily marketable, a considerable loss will undoubtedly be sustained in their sale. The total dividend which members are likely to receive will probably be something under 90 per cent.

Syracuse, July 27.—Willard H. Peck, secretary of the People's Mutual Life Insurance Association and League, convicted of perjury, was sentenced by Justice P. C. J. De Angelis on Monday to serve not less than two nor more than five years in Auburn State prison. The justice granted a certificate of reasonable

doubt after appeal was made by Peck's attorney and bail of \$7,500 was provided.

STANDARD CASUALTY

POLICY FORM.

At the twenty-fourth convention of the Detroit Conference, Louis H. Fibel, president of the conference and president of the Great Eastern Casualty Company, had this to say yesterday in regard to the policy form used by the companies:

The contract recommended in New York in March, 1907, is still practically the standard policy of nearly all our largest and strongest companies.

In some few instances, I note with sincere regret a disposition to make slight changes. In themselves they are insignificant, but the spirit is most deplorable. A single loosened thread in a great garment is in itself of little moment; but in the stress of wear and tear that one thread forms the rift in which the talons of the disruption find a lodgment and the end is wreck. Under our policy which I am proud to have fathered and fostered we have done well; business has multiplied, clients have been satisfied and we have made a fair underwriting profit. The margin now is none too great for security. Expenses are necessarily increasing with the trend of the times. Epidemics will come, as they have come; the first quarter of this year with its trying weather brought us an unusual loss ratio. Panics and business depressions will recur, bringing in their train shrinkage in premiums, inevitable increase in expense ratio and an equally certain expansion in the moral hazard element of our claims. We should aim to strengthen our treasures and establish them on a basis to weather any possible contingencies and you surely must realize the folly of rushing to enlarge the scope of our liability because you are enjoying a present prosperity.

A GREAT SIX MONTHS

We closed the first half of 1910 with a rousing increase in new business over our record for the first half of highly prosperous 1909.

In policies and dividends we have what the public wants. In literature and canvassing aids we have what the agent wants. And back of all is a reputation gained from 59 years of activity as a Massachusetts Company.

If you are a genuine producer, a *delivering* producer, and wish to join our forces, address

GEORGE D. LANG,

Superintendent of Agencies

Massachusetts Mutual Life Insurance Company,
Springfield, Mass.

Incorporated 1851

In New England.

THE New England Insurance Exchange held its July meeting last Saturday and adopted a new standard form for farm property, recommended by the executive committee. A proviso declares that with the use of this form farm property may be written for three years at two and one-half annual rates, without it only one year policies may be written on belongings buccolic.

The mechanic's permit rule was amended as follows: First, by inserting after the words "Summer Hotels" in the first line of the second paragraph, the words, "and risks rated by the factory improvement committee." Second, by inserting after the fourth paragraph the following: "Mechanic's permits for risks rated by the factory improvement committee may only be granted when special permission for such permit is promulgated with the rate." Third, by the adoption of a special form mechanic's permit for use on risks rated by the factory improvement committee.

The gasoline engine rules were amended so as to allow permit to be granted free of charge for gasoline engines located at least twenty-five (25) feet from insured property, without using the standard form of permit.

Announcement was made of the death of George E. Brewer, an honorary member of the exchange, which occurred June 13 at Albuquerque, N. M. Mr. Brewer became an active member of the exchange in 1885. He was then a special agent of the Sun Fire Office, with headquarters at Springfield, Mass.; was also for a time a partner in the Woonsocket (R. I.) agency of the late Col. Amos Sherman, for many years the Sun's leading field man in New England. Messrs. Hatch, Barton and Downey

were delegated to prepare a tribute to the memory of Mr. Brewer.

Boston's Building Record for 1909.

The report of Building Commissioner Everett of Boston for the year 1909, recently issued, states that during that twelvemonth all previous records of the city were eclipsed. The construction for the year includes 390 brick dwellings, costing \$7,285,000, and 1,154 wooden buildings, costing about \$6,148,000. Besides this repairs costing about \$3,000,000, were made on old structures. The overwhelming majority of wooden buildings may perhaps furnish an indication to the public at large why fire losses are frequent and insurance rates are high. Considering the frequency with which Boston building laws have been overhauled and apparently made more exacting in their requirements, the foregoing showing does not give evidence of general effectiveness in increasing the proportion of fire-resisting structures.

A Telling Allegory.

"Whittlings" for August, the ever-instructive and interesting publication of the New Hampshire Fire, is at hand. A striking design on the front page shows the Genius of Fire Insurance attempting to drive her chariot into the gate of Utopia of low rates brought about by strictly enforcing the building laws and a low loss ratio. A mule, laden with bills contained in a basket of graft, and bearing a banner inscribed "Low rates by legislative command," is trying to drag the chariot over a precipice. "That the gateway to lower rates of fire insurance lies through a reduction of the national fire waste rather than by way of drastic legislation pertaining to the conduct of the fire underwriting business, is something to which

How Life Insurance Grows.

From Agency Bulletin No. 2 of the New England Mutual Life, the following illuminating showing is extracted: "In 1888 the relative saving of the great American public was \$2 in savings banks and \$1 in life insurance, the respective amounts in 1888 in each institution being as follows: Savings banks deposits, \$1,384,196,550; life insurance assets, mostly legal reserves (the savings bank fund of life insurance), \$668,196,883. The past twenty years have witnessed a marvelous growth in both these methods of saving, but life insurance has far outstripped the savings bank in its relative growth. This is well illustrated by the figures for the five years ending with 1908. During this quinquennial life insurance funds increased \$1,115,072,897, or 49.23 per cent.; savings bank funds increased \$725,349,100, or only 24.71 per cent. The people are now placing in life insurance reserves nearly \$2 to each \$1 in savings bank deposits."

New England Brevities.

Fred Merchant, mentioned in last week's issue as having been arrested on the charge of setting a fire in Chelsea, Mass., last May, was discharged in the Chelsea court. Judge Cutler, in ordering the discharge, stated that the Government had failed to show that Merchant had any connection with the fire, and that the defendant had proved a perfect alibi at the time.

F. M. Johnson, who has cared for the agency department of the Field and Cowles office in Boston, has been appointed a special agent for New England of the Royal, dating from next Monday. This appointment, as well as another in prospect, follows naturally upon recent changes in the

Field and Cowles office that have been noted in these columns.

A gentleman holding a responsible position in one of the leading New England life insurance companies said to the writer the other day: "I have a complaint to make about your paper." "And what may that be?" "You have so much valuable matter and food for thought in each issue, that I have difficulty in finding time to assimilate and digest it all." We gladly acknowledge the soft impeachment, and shall continue to endeavor to deserve it.

At a meeting of the policyholders of the Massachusetts Fire and Marine last Thursday eighteen new directors were added to the board, among them such prominent names as Edward Lanning, secretary of the Continental; Roland O. Lamb, president of the John Hancock Mutual Life, and Walter B. Henderson of John C. Paige & Co.

James Grover, for some years past identified with the New England field work of the Delaware Insurance Company, will early in August connect himself with the New York Underwriters in a similar capacity.

Relative to the recent, almost simultaneous announcement, that the Connecticut Fire had notified its Texas agent not to accept any more business under present conditions in that State, and that the Equitable Fire and Marine had been licensed to do business in the Lone Star region, a Boston fire underwriter made this terse comment: "Number One, experience had; Number Two, experience to get!"

Edward B. Ranshousen of Springfield has succeeded his father as general agent of the State Mutual of Worcester for Western Massachu-

setts. R. L. Sturdevant next week becomes general agent of the company for Connecticut territory radiating from New Haven.

Recent appointments by the Standard Fire of Hartford: R. W. Hosmer & Co., Chicago; Lewis Hartz, Cleveland; Walter C. Leach, Minneapolis; John Watson, St. Paul.

RAWN INSURANCE CLAIMS.

Chicago dispatches state that the accident insurance companies in which the late Ira G. Rawn, president of the Monon Railroad, carried policies, have completed an investigation into the cause of his death. It was announced by J. F. Damman, who will handle all the cases, that none of the companies would compromise the claims with the heirs.

"Either the full face of the policies will be paid or not a dollar," he said. The total amount of the accident insurance in the capital is \$131,500, including accumulations. The annual premiums paid by the late railroad president aggregated \$5,750, making him, it is said, the heaviest carrier of accident insurance in Chicago.

The Ladies of the Maccabees of the World is pushing a new "combined plan" proposition, by which the insured may obtain any combination of whole life, term, and disability protection. It has a reserve of \$4,339,000. In pursuance of its policy of education, the Ladies of the Maccabees of the World has held this year a series of schools for its field workers—one at the headquarters in Port Huron, Mich., one in Chicago, one in Denver, one in Salt Lake City, and several at different points on the Pacific Coast.

J. P. Steffner, formerly on the staff of THE CHRONICLE, has abandoned insurance journalism and purposes to re-enter the surety business.

INSURANCE IN FORCE
FIFTY MILLION DOLLARS

Funeral of Dr. Leslie D. Ward.

THE funeral of Dr. Leslie D. Ward, vice-president of the Prudential Insurance Company, who died in London on July 13, was held in the South Park Presbyterian Church at Newark on Monday of this week.

The bronze casket, covered with a mantle of orchids, stood before the pulpit which was piled high with Easter lilies and magnificent floral tributes. In the body of the church were seated bankers, financiers and insurance chiefs of country-wide renown, ranks of veteran soldiers and hundreds of men and women who had come to pay the tribute of their affection and regret in the loss of the Prudential's vice-president.

After the organist played Chopin's funeral march the Rev. Dr. J. N. Blanchard, rector of the Episcopal Church at Madison, N. J., where Dr. Ward had a summer home, made a prayer, and the Masonic Temple Quartet of New York sang the hymn "Crossing the Bar." The Rev. Dr. Blanchard read from the Scriptures and the Rev. Dr. Lyman Whitney Allen, pastor of South Park Church, followed with a prayer.

Next in the services was the singing of the hymn "Come Unto Me When Shadows Darkly Gather," by the Masonic Temple Quartet, followed by prayer by the Rev. Dr. Blanchard, and the Rev. Dr. Allen gave the benediction. The services closed by the quartet singing the hymn, "Sleep Thy Last Sleep."

Besides the pews on either side of the main aisle of the church for Leslie P. Ward, the widow of Herbert Ward and her daughter, the three brothers of Dr. Ward and their families, other relatives and old friends, pews were occupied by delegations from the Thirty-seventh New Jersey Volunteer Veteran Association, of which Dr.

Ward was president, and Lincoln Post No. 1, Grand Army of the Republic, of which he was an old member.

The honorary pallbearers were seated in pews on the south side of the main aisle across from the members of the family and other mourners. Back of the honorary bearers were officers and directors of the Prudential Company, the Union National Bank, of which Dr. Ward was vice-president; the Fidelity Trust Company, the Public Service Corporation, former members of the Essex County Court House Commission, members of the Newark Board of Trade, representatives of the New York Equitable, Metropolitan and Mutual insurance companies, the Alliance Francaise, the Pompton River Club, the Essex Club, the Essex County Country Club, the Morristown Golf Club and other associations.

The honorary pall-bearers were John F. Dryden, Uzal H. McCarter, William Scheerer, Mahlon Pitney, Thomas N. McCarter, William S. Gummere, Franklin Murphy, George W. Perkins, J. Broadhead Woolsey and Oscar Willigerod.

Among those in the church, besides the officers and directors of the corporations, banks and associations and clubs named above, were United States Senator John Kean, Peter Egenolf and John W. Whelan, of Elizabeth; Vice-President Haley Fisk, of the Metropolitan Life Insurance Company, New York; Dr. John P. Munn, president of the United States Life Insurance Company, New York; Frederick Frelinghuysen, president of the Mutual Benefit Life Insurance Company, Newark; John B. Lunger, vice-president of the Travelers Insurance Company, of Hartford; former Judge George R. Gray, John F. Shanley, former United States Senator James Smith, Jr., Con-

AGENTS WANTED FOR UNOCCUPIED TERRITORY

gressman R. Wayne Parker, Richard V. Lindabury, E. C. Hay, James P. Dusenberry, David E. Benedict, Fire Commissioner T. Edward Burke, General Peter F. Wanser, of Jersey City; P. Stanford Ross, William H. F. Fiedler, John N. Miller, Daniel Halsey, Alfred N. Dalrymple, Tax Commissioner Carroll and scores of women active in churches.

Others were Frederick W. Egner, Chauncey G. Parker, Peter B. Widener, Jr., and William Clarke, of Philadelphia; Wallace M. Scudder, Harvey Fiske, former Attorney General Robert H. McCarter, members of the medical department of the Prudential, of which Dr. Ward was the chief, John C. Eisele, Abraham Rothschild, N. King, Oliver W. Jackson, Frederick Murphy, Jr., George W. Reme, William B. Kinney and Francis Mackin.

The interment was in Mt. Pleasant Cemetery. The services were brief. Dr. Allen made a short prayer and Dr. Blanchard read the commitment service of the Episcopal church.

The executive committee of the Association of Life Insurance Presidents adopted the following memorial to Dr. Ward:

The Association of Life Insurance Presidents learns with deep sorrow of the death of Dr. Leslie D. Ward,

which occurred at London, England, on the 13th instant.

By his death this association has lost an active member and a faithful supporter of its work; the Prudential Insurance Company of America has lost an efficient officer whose efforts contributed much to its upbuilding; the business of life insurance generally has lost a distinguished leader and the State of New Jersey one of its foremost citizens.

The many organizations with which Dr. Ward was connected have lost much by his death, but his friends and associates have lost more. He was ever tolerant of the opinion of others, patient with their mistakes and shortcomings, modest in the expression of his own views and wishes, genial and pleasant under trying circumstances; in short, he was a gentleman in the truest sense of the word.

He was a man whose ability helped to make his country more famous than it would have been had he never lived and whose character helped to make his fellowmen happier than if they had never known him.

In common with his many other friends we sincerely mourn his loss, realizing that he occupied a place in our affections that cannot be filled by anyone else.

OBITUARY.

Col. C. G. Yates.

Colonel C. G. Yates, secretary of the People's National Fire Insurance Company of Philadelphia, died last Saturday morning as a consequence of an apoplectic stroke two days before. He had been connected with the Peoples National since last October, having resigned the vice-presidency of the Washington Fire Insurance Company of Seattle in order to join the Peoples National. Before he went with the Washington Fire he had been associated with Voss, Conrad & Co., of San Francisco.

Thomas E. Drake.

Thomas Edminston Drake, superintendent of insurance for the District of Columbia, died last Saturday night at the Providence Hospital in Washington, as a result of a nervous breakdown due to overwork. Mr. Drake was a native of Waldo, Ohio, where he was born in 1852. He was educated in the schools of that town and in the University of Ohio at Columbus. At the age of 19 he became State agent of Ohio for one of the largest old time life companies in the West. He was an author of several works on life, fire and accident insurance, and legislature. When the law creating the insurance department for the District went into effect at the beginning of 1902, Mr. Drake was appointed superintendent of insurance. All his proposed legislation was en-

acted into laws. For several years he was president of the National Association of Insurance Commissioners.

George T. Wilson, second vice-president of the Equitable Life Assurance Society, representing the Pilgrims of the United States, was received on Monday at Buckingham Palace, in London, where he presented to Queen Mother Alexandra an album containing an engrossed address of condolence on the death of King Edward.

Accident Insurance in Denmark.

WALLACE C. BOND, United States Consul General at Copenhagen, advises the State Department at Washington that compulsory insurance by Danish employers against accident or loss of life of workmen in certain employments is provided for by law, which he reviews.

The law requiring insurance of workmen has, since its passage, January 7, 1898, been in continuous operation, apparently to the mutual satisfaction of both employer and employee. Although the law does not deny the employer the right of taking the risk of the insurance himself, that is, virtually constituting himself an insurance company, as a general rule Danish employers prefer to insure their workmen in an insurance company licensed by the State to assume such risks.

In different classes of employment the premium varies considerably. For most employments, however, the premiums range between 12 and 30 crowns (\$3.22 and \$8.04) per workman per annum. In some cases it is as low as four to five crowns (\$1.07 to \$1.34), while in hazardous work it is as high as 60 to 80 crowns (\$16.08 to \$21.44).

While it would appear that the compulsory insurance of workmen constitutes a direct tax on the manufacturer, experience here shows that the consumer practically pays the insurance premium, it being included by the employer in estimating the cost of production. The advantages of the Danish law are:

(1) Absolute protection of the workingman; (2) avoidance of all litigation connected with injuries received from accidents; (3) the knowledge on the part of the employer that so long as the insurance is paid he need fear no losses from damage suits, etc.; (4) if a workingman is injured, those depending on him are protected from such want or privation as might be caused by the cessation of his wages. The settlements are made promptly and the sufferer and his dependents are caused as little inconvenience as possible.

Employments and Beneficiaries.

The law covers a great variety of employments, such as work in factories where machinery is used, shops where explosives are made or used, stone quarries, most building works, shipbuilding, railway, bridge and canal construction, erection and repairs of telegraph, telephone and electric wires and lightning rods, railway, street railway and omnibus service, etc. It also includes in its application

not only private firms employing workmen in the lines it specifies, but also State and city corporations acting as such employers.

The insurance, according to this law, applies to every person who, for wages or on contract, is employed in Denmark continually or temporarily in the technical-mechanical part of the business, or who has been engaged by the employer for a certain sum to supervise or manage this part of the business, if the compensation does not exceed 2,400 crowns (\$643) yearly.

If a workman engaged in any of the employments covered by the law suffers an accident which has temporarily or continually decreased his working capacity, he is insured against the sustained loss of his working capacity. If the accident causes death, and the workman leaves a widow, she is entitled to the insurance, if the marriage took place before the accident and they had not ceased to live together.

If the workman does not leave a widow who is entitled to the insurance, his children are entitled to it, if he was liable for their support or did support them at the time the accident took place. If the workman leaves neither wife nor children, it will be decided by a council whether the insurance shall be due to others who at the time of the accident were supported by the workman. The same rules apply to female employees who

leave children or others supported by them.

Survivors who at the time of the accident did not live in Denmark have not the right to claim compensation.

Conditions Involved.

In case of any accident the person in question is entitled to the following compensation:

(1) If the accident involves temporary incapacity to work, the eventual consequence of which can not yet be decided, the injured workman, from the end of the thirteenth week after the accident and until the treatment of his injury has been finished, or until his incapacity to work is declared to be of a permanent nature, or until

death, is entitled to a daily payment. This daily payment, if complete incapacity to work exists and as long as it continues, shall amount to three-fifths of the daily wages of the person injured, not, however, more than 2 crowns (\$0.536) and not less than 1 crown (\$0.268) a day.

If only a decrease of the working capacity is present from the beginning, or later, the payment shall only be a part of the daily payment which the person in question would have received or has received in case of complete incapacity to work. This part of the payment shall be proportionate to the decrease of the working capacity of the injured.

(2) If the consequence of the accident is inability to work, which is declared to be of permanent character (invalidity), the person injured is entitled to a sum of money, the amount of which shall be decided according to his or her annual wages. If the incapacity to work is absolute, the sum shall be equal to six times the yearly wages, not less, however, than 1,800 crowns (\$482.40) or more than 4,800 crowns (\$1,286.40). If the working capacity has only been decreased, the sum shall be proportionate to the importance of the decrease of the working capacity. Furthermore, the person injured shall be entitled to a daily payment for 13 weeks according to the rules.

(3) If death is the consequence of the accident, the survivors of the deceased are entitled to 50 crowns (\$13.40) for burial expenses, and a sum of money according to the following rules: If the deceased leaves a widow or any other single person who is entitled to the insurance, the amount due shall be four times the annual wages of the deceased; however, not less than 1,200 crowns (\$321.60) nor more than 3,200 crowns (\$857.60). If the deceased leaves more than one who is entitled to the insurance, the council decides how the amount shall be divided among these.

Agreements between the employees and the employers to the effect that the provisions of this law shall not apply, or to the effect that the employees shall pay an insurance premium according to this law or a part of same, have no validity whatever.

In order to provide for the employers a safe way of transferring to an insurance company the risk in connection with the insurance of their workmen, the minister of the interior is

authorized to recognize, on application, associations of employers, under reciprocal responsibility, or companies with limited liabilities, as insurance companies.

Special Council on Claims.

For the settlement of all questions arising under this law a council has been established, consisting of a chairman appointed by the king; two members likewise appointed by the king, of which one shall be a doctor; two employers appointed by the minister of the interior, and two workmen of those trades included in this law.

The council decides as soon as possible after notice of any case—

(1) Whether the case reported involves any claim under the accident insurance law.

(2) Whether such facts are present as will determine the nature of the compensation.

(3) The size of the compensation which is due to the survivors.

Right of Appeal.

The decisions of the council as to the questions under (1) may be appealed to the minister of the interior, while those under (2) and (3) cannot be appealed.

Amounts decreed by the council are to be paid to that body within 14 days and are at once paid to the person in question. In some instances the council may decide that an annuity be bought for the money, in which case the annuity is paid direct to the annuitant. Daily payments and burial expenses are always paid direct to the beneficiary.

According to the last annual report of the council, made to the minister of the interior and published, the number of cases of accident reported and dealt with by the council in 1908 amounted to 2,893, of which 425 were not considered, as they were found not to involve any claim according to the law; in 1,365 of them the person in question fully regained his working capacity; and 58 cases resulted in

death. In 17 of the latter the deceased did not leave any person who was found entitled to the insurance, and the funeral expenses only were paid. In the remaining 41 cases beneficiaries were found and 130,400 crowns (\$34,947) were paid in addition to the funeral expenses.

Frederic S. Withington, actuary of the Western States Life Insurance Company of San Francisco, announces that the company has received its license to do business in the State of California, and will begin to issue policies very shortly. He says that they are now in receipt of numerous applications. At the foot of the letterheads of the new company appears the legend, "Keep your money in the West."

Fester, Douglas & Folsom will represent the Nordische Insurance Company of Moscow, which is about to enter Connecticut.

AGENTS WANTED.

Most agents take a vacation during a part of the Summer months. The agents of the Philadelphia Life, having the advantage of a direct contract with the Company, can generally be placed in territory where they may enjoy a vacation and at the same time have the advantage of writing business and making money.

Write Perry to-day for contract.

BUSINESS AND POLITICS.

At the thirty-fourth annual meeting of the Agents Association of the Northwestern Mutual Life Insurance Company at Milwaukee, which was attended by nearly three hundred agents from all parts of the country, President George C. Markham analyzed business conditions. He thought much of the feeling of uncertainty was due to unwise legislative activity. He said in part:

"When we realize that in this country as soon as the legislatures and Congress meet there is a feeling of depression and disquiet that pervades almost the entire business of the country, that is only lifted when the several legislatures and Congress adjourn, we cannot escape the conclusion that the business interests of the country would be in much better condition if our legislatures and Congress did not meet so often. And we cannot help but feel that this state of affairs is all wrong. In fact, there ought to be a feeling quite the contrary when our lawmakers assemble than one of distrust and anxiety.

"A certain class of our lawmakers who are essentially politicians, and have political ambitions, and there are very many of them, seem to be of the opinion that any legislation, no matter of what import, that they can urge against corporations, if such legislation will tend to advance their political interests, is legitimate and justifiable. These same men, largely for the same reason, are also anxious to levy taxes to a very burdensome amount upon all sorts of corporations, both private and public. In fact, it seems to me at times that our lawmakers have gone almost insane upon the subject of the imposition of taxes. * * *

"Nevertheless, I believe that this quite general disturbance to the business interests of our country is but temporary. The patriotism and great good sense of the American people residing within the borders of these United States, will in time right these transient wrongs, and the great industrial enterprises now only partially developed, will continue to grow and expand in all directions and capital and labor will be brought closer together and the obligations of each to the other will in time be brought into consistent, harmonious relations, and then, indeed, this country of ours will stand forth not only in name, but in reality as the foremost nation of the earth.

"I cannot refrain from expressing some regret that the loans upon our policies are increasing very rapidly and I further regret that the tendency

seems to be to borrow more freely upon our policies than ever before, and in connection with our loans on policies, I am creditably informed that a very considerable portion of the money borrowed by quite a large number of our policyholders, is used for the purpose of speculating in stocks and bonds. I think it would be for the best interests of the policyholders, the agents, and all concerned, to discourage as far as possible the free borrowing of money upon policies, and to advise and encourage those who have borrowed, to lift the indebtedness from their policies as soon as they possibly can. The disappointment to dependant beneficiaries will be very great in very many cases when it is known to them, after the bread-winner has gone, that the greater portion of the value of the insurance has already been exhausted."

Good men, whether experienced in life insurance or not, may make direct contracts with this company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, N. Y.

ILLINOIS FRATERNAL INDICTMENT LIST.

The men, against whom the Rock Island Grand Jury found indictments in connection with the merger of the American Home Circle and the Fraternal Tribunes were as follows:

Dr. A. L. Craig, Chicago, former supreme physician Fraternal Tribunes.

C. F. Hatfield, Chicago, insurance agent, said to have been employed by American Home Circle to open negotiations with Fraternal Tribunes.

Max J. Frankel, Chicago, alleged holder of dummy note against American Home Circle.

H. A. Weld, Rock Island, former supreme attorney Fraternal Tribunes.

Robert Rexdale, Rock Island, former supreme secretary Fraternal Tribunes.

Thomas W. Wilson, Springfield, former president American Home Circle, now head of Royal Benefit Society, Washington, D. C.

Michael B. Garber, Springfield, former secretary American Home Circle, now secretary Royal Benefit Society, Washington, D. C.

C. H. Walters, Springfield, former medical examiner American Home Circle.

George W. Kenney, Springfield, former attorney for American Home Circle.

S. S. McIlvaine, Auburn, former treasurer American Home Circle.

Miss Margaret McIlvaine, Auburn, alleged holder of dummy note against American Home Circle.

Otho L. Caldwell, Auburn, alleged

holder of dummy note against American Home Circle.

K. M. Whitham, Aledo, former supreme tribune, Fraternal Tribunes.

Craig, Hatfield, Whitham, Weld and Rexdale are charged with embezzlement, conspiracy to defraud the Fraternal Tribunes and conspiracy to defraud the general public, making three indictments against each. Wilson, Garber, Walters and Kenney were indicted on similar charges, as well as on the charge of having stolen the records of the Fraternal Tribunes, value at \$10,000. Frankel, Miss McIlvaine and Caldwell are accused of perjury in connection with testimony given before the Grand Jury concerning the notes they had received from the American Home Circle through Wilson and Garber.

HERE AND THERE

Frederic H. Calkins has been elected a director of the Fidelity Mutual Life Insurance Company of Philadelphia. He has been with the company nine years as superintendent of claims and since 1903 as associate counsel. As director he succeeds the late A. P. Flint.

George B. Lyons, formerly with the Equitable Life Assurance Society of New York, has been appointed by President Hamilton as a special representative of the home office of the Federal Life Insurance Company with the title of inspector.

George Gilmour, who has been selected by the Employers Liability Commission of the State of New York as consulting engineer and special investigator sailed last Saturday on the Anchor liner Columbia to inquire into methods of prevention of industrial accidents in Great Britain, France, Belgium, the Netherlands, Switzerland, Germany and Sweden. His investigations will lead him to the big factories, the ship building yards, the textile factories in France, the Krupp works at Essen, Germany, and the various railroad systems. As American member of the Association for Industrial Insurance and Betterment Mr. Gilmour will attend the meeting of the general committees at The Hague September 5, 6 and 7, and will represent the American Museum of Safety at Berlin in October. The tour of investigation will take four months.

The New York Plate Glass Insurance Company has reinsured, as of August 1, the entire plate glass business of the Empire State Surety Company, which will discontinue writing that line.

**Absolute Security and
Economy of
Management**

In the Western Field.

CHICAGO, July 27.—George H. Holt of Chicago sent a letter last week to the Chicago fire insurance managers, whose protest recently caused the Association of Commerce to disown Mr. Holt's expression of views before the Illinois Fire Insurance Commission, in which Mr. Holt proposes to the managers that a hearing be held before the executive committee of the Association of Commerce on the points on which he and the managers have taken such opposite views.

Mr. Holt is very foxy. In his letter he appears to take it for granted that the managers will be glad of an opportunity to rout him if they can. The managers will pay no attention to his suggestion. They know well enough that Mr. Holt would have his brief in shape to appeal to the newspapers as sensational, just as he did when he appeared before the Illinois Fire Insurance Commission. The hottest things he would say would be played up under scare heads, while the answer of the managers, even though it answered him fully on every point, would probably get but little publicity. By entering into any argument with Mr. Holt the managers would simply give him another opportunity to appear in the role of a friend of the public, a David smiting the insurance Goliath in the interests of the down-trodden people. Such a hearing would also give considerable free advertising

to the Policyholders Union, of which Mr. Holt is president.

By refusing to argue the case the managers give Mr. Holt an opportunity to say, "You dassent," but as there is nothing very sensational in such a statement he is not likely to get much publicity for it.

* * *

A few weeks ago the Illinois Inspection Bureau extended the use of the coinsurance clause to a number of additional classes of risks, with reductions in rate for its use. By this time the agents in the State have come to a full appreciation of what the change means and some of them are expressing themselves forcibly. Because the new rule works a reduction some of the agents are pleased with it, but there are others who regard the action as unnecessary and ill advised. They figure that there was no occasion for the change and that it will unsettle things and make the agents much work in meeting the charges of assured that the companies have been holding them up in the past because the rule was not adopted before.

* * *

This week the meeting of Western managers and executive officers of fire insurance companies was held in Chicago to consider the reduction of expenses in large cities. As the time for the meeting drew nearer the be-

lief grew that nothing would come of it. Reports from day to day from New York caused those who hoped for the accomplishment of something in the East to lose faith in the ability of the Eastern executives and managers to meet the situation there satisfactorily. It has been thought by some of the Western men from the start that nothing could be done in the West unless the East acted first or the two sections took action simultaneously.

During the period previous to the meeting tremendous pressure was brought to bear by some of the large agencies in Chicago, as well as smaller ones. In addition, mutterings were heard from the other "excepted" cities, although their agents did not take the question up aggressively, as it was understood a try-out would be made on Chicago before other points were taken up. Very few, if any of the local men in Chicago, aside from the salaried managers of local offices, want any change made. When the volume of business done by Chicago agencies is considered, in connection with the fact that volume is very hard to get this year, it can readily be seen that managers and officers would feel the pressure severely.

* * *

Just at the present time no new companies are joining the Western Insurance Bureau. It is known that several are giving the question of

The Northwestern Mutual Life Insurance Co. of Milwaukee

GEO. C. MARKHAM, President
A. S. HATHAWAY, Secretary

New Business Paid-For

1905	.	.	.	.	.	\$ 90,334,038
1906	.	.	.	.	.	93,563,452
1907	.	.	.	.	.	102,233,634
1908	.	.	.	.	.	109,685,428
1909	.	.	.	.	.	113,716,188

Each year larger than any in the previous history of the Company:

Commenced Business 1858

INSURANCE MEN will note the significant increase in The Northwestern's new business during the past five years.

IMPORTANT FACTS relating to this business are shown by the following percentages:

	Expenses	Mortality	Interest
1905	12.15	67	4.73
1906	11.76	59	4.72
1907	11.81	58	4.76
1908	10.76	59	4.84
1909	10.63	54	4.85

It is capable of easy demonstration that The Northwestern is the best Company to insure in.

See The Northwestern's new (1910) policy contract with its Dividend Options, Paid-up and Endowment Options, Options of Settlement and the Premium Loan Features.

Issues Partnership and Corporation Insurance.

H. F. NORRIS,
Superintendent of Agencies.

joining careful consideration, and it is expected that when the summer season has passed there will be several accessions to the membership. Some of the companies which would be very acceptable as members are waiting for things to shape up a little more. The president of one prominent non-affiliated made this assertion a few days ago. He intends to join the bureau, but there are others he also wants to see join which have not done so yet and he desires to see what they will do before committing himself. Officers of the bureau state that the question of separation never has been considered by the organization. There may be members who are in favor of such a program at some future time, but the bureau itself has taken no position on the question.

* * *

Companies are losing some money by forest fires in the West again this year. Meagre reports of the wiping out of the lumber town of Heinemann, Wis., last week showed that several companies had losses there of \$15,000 or \$20,000. In some parts of the West the season has been very dry, and bad forest fires have been reported from a number of points in the past few days.

Under such conditions some of the stock companies can get consolation for the loss of much of their Wisconsin lumber business to the mutuals and syndicates. They cannot congratulate themselves over the rates they got on what they did write, however, for the lumber rates are reported badly demoralized.

* * *

Preparations for the Northwest meeting in Chicago in October have been going steadily forward for some time. While President Deatrick has not given out the names of speakers yet, it is understood that he has secured acceptances from some very high class talent, and that the pro-

gram will be a diversified and profitable one. This is the year for a manager to be elected president, but so far there has been little, if any, talk as to candidates for the honor.

The Blue Goose, whose annual meeting and "doings" are held in connection with the Northwest meeting promises to have a big time. The Illinois pond already has commenced arrangements for a banquet complimentary to the grand officers. There is promise of degree and installation work far surpassing anything in the past. It is probable that the ritual of the order will be revised at the coming meeting the present ritual being much the same as the one originally improvised for an evening's sport at Green Lake.

* * *

Chicago plate glass managers and general agents last week held another "talkfest." They are going through somewhat the same process in getting together as the burglary insurance men did last year. Nearly everybody wants to retain all the advantages he now has and get as many more as he can. The older companies with strong connections in the fire offices naturally want to retain their sub-agents and favor higher commissions for fire agents than for brokers. Some of the younger companies which have no good sub-agency connections, would be well pleased to have the sub-agency system done away with or limited closely and would prefer to pay everybody the same commission, thus getting the brokers into the way of placing their business directly instead of through the fire offices to which they are attached. There are a few old agencies which have a fine business which are not very enthusiastic about having a compact at all. There are other companies with a large cut rate business on their books which would like to tie their competitors up while they endeavor to raise their rates.

INSURANCE COMPANY

ESTABLISHED 1836. ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS	\$13,885,802.88
LIABILITIES	8,766,622.58
SURPLUS	\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income.	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of..... \$2,710,650
And increase of assets in the same time of..... 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the Company's business, convinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

Liability Underwriters Go Slow.

AFTER a session of two days last week, the liability underwriters found it necessary to get additional statistics in Hartford, and a sub-committee, consisting of the Travelers Insurance Company and the Aetna Life Insurance Company, was appointed to meet in Hartford to-day and prepare data showing what effect the revised employers' liability laws would have on teams risks lo-

cated in this State. This sub-committee will immediately report to the various companies doing business in this State.

Underwriters are of the opinion that within ten days they will have before them all the necessary data and deductions of the general committee which will permit them to formulate proper rates for carrying the increased liability imposed by the new laws passed

by the last legislature of this State, imposing additional burdens on employers of labor for damages arising from accidents happening to employees, and also for the protection which employers will need after September 1, in consequence of the law adopted by the same legislature imposing com-

(Continued on Page 8.)

NEW YORK LEGISLATIVE COMMITTEE PUTS OFF ITS PUBLIC HEARINGS UNTIL AUGUST 30.

It Also Decides that Charges Against Candidates for Nomination or Election for
Elective State Offices Must be Filed Before September First.

ALFRÉD HURRELL, counsel of the State Insurance Department, was selected as assistant counsel of the committee of investigation appointed by the Legislature in its last session to inquire into alleged corrupt practices in that body and such charges of similar character as may be filed with the committee. The appointment of Mr. Hurrell was made at an executive meeting of the committee at the Murray Hill Hotel on Tuesday afternoon.

The committee also put off its first public hearing for the taking of evidence at City Hall until August 30. As long as the committee has practically thrown into September and October its active public work, it will have to be doubly careful that it is not made the subservient source of partisan campaign literature. There is no question that the public generally

would regard with far less prejudice testimony taken in August or November than in September and October. The committee, doubtless, has good reasons for undertaking this handicap. After the adjournment of the committee the following statement was issued to the public:

"The committee invites the co-operation of all citizens in assisting in the progress of its work, and to that end will welcome any charges relative to corrupt practices of public officials and information concerning any abuses which may be known to exist in industrial life insurance and fire, casualty, marine and other forms of insurance than ordinary life. All persons desiring to lodge charges, complaints and information as to corrupt practices or the other matters referred to may do so with the counsel to the committee, the Hon. M. Linn Bruce, 55 Liberty street, New

York, or with the chairman of the committee, the Hon. E. A. Merritt, Jr., at the Murray Hill Hotel, New York, or at Potsdam, St. Lawrence county, N. Y. Any member of the committee will also receive and report any matter filed with him.

"Attention is called to the fact that the only limitation to the filing of charges is that a charge of official misconduct against a candidate for nomination or election to an elective State office must be received before September 1, 1910. This does not, however, limit the committee in any way from proceeding to the fullest extent in the investigation of any such charges after that date; and charges against persons other than candidates for elective offices will be received at any time during the existence of the committee."

With the public hearings beginning on August 30 and with the demand

of the committee that charges of official misconduct against a candidate for nomination or election to an elective State office must be received before September 1, if they are to be inquired into, the committee might find itself so restricted as not to be able to investigate any public officials of consequence and power at a time when it might affect the political fortunes of such officials.

The committee was in session for nearly three hours on Tuesday, and in the lobby of the hotel were a large number of politicians who seemed anxious to learn its plans. Most of them were local men. Now that the date of the first public meeting of the committee has been decided upon, Mr. Bruce will begin to subpoena witnesses. One of the first will be James W. Cunningham, of the former brokerage firm of Ellingwood & Cunningham. In the fire insurance investigation last spring an effort was made to get at the books of this firm, but they had been removed to New Jersey. Mr. Cunningham met the committee at the hotel and said he would produce the books when they were asked for.

A clerk from the office of the Title Guarantee and Trust Company appeared on Tuesday with a large bundle containing books and documentary evidence which he brought in response to a subpoena duces tecum issued by the committee.

Mr. Bruce said the books contained stock lists of the New York Electric Vehicle and Transportation Company and the New York Transportation Company. The latter was a holding concern for the Fifth avenue stage line properties. In the Allds investigation it was shown that the firm of Ellingwood & Cunningham had sold large blocks of stocks for a number of legislators in April, 1900, on a rising market, when a bill was pending before the Legislature giving an omnibus franchise to the stage company, calculated to boost the value of its stock immensely. The bill was passed by the Assembly in the days when the Speaker was S. Fred Nixon.

The committee hopes to obtain the services as its actuary of Professor Albert W. Whitney, who for the past eleven years has occupied the chair of mathematics in the University of California.

Professor Whitney is a graduate of Beloit College of the class of 1891 and has made a practical study of the business of insurance. He is considered one of the country's experts on fire insurance, particularly as regards the theories which underlie scientific rating. Immediately after the San

ALFRED HURRELL.

Francisco earthquake he was selected by the San Francisco Chamber of Commerce to investigate and report on the loss settlements made by fire insurance companies.

L. H. Conant, of the firm of L. H. Conant & Co., certified public accountants, of 30 Broad street, will act as accountant for the committee. Joseph J. Early, a Brooklyn newspaper man, has been made assistant secretary.

Mr. Hurrell, the assistant to M. Linn Bruce, has received a six months' leave of absence from Superintendent Hotchkiss, in order that he may serve the committee. He is a member of the law firm of Horton & Hurrell, of Buffalo, and is one of the faculty of the law department of the University of Buffalo. He has been an Assistant District Attorney of Erie. He will have entire charge of that part of the investigation relating to the insurance companies.

Chairman Merritt announced yesterday that Isidor J. Kresel had been retained as an assistant counsel to M. Linn Bruce by the committee. Mr. Kresel, who is associated with former District Attorney Jerome in the practice of law, was for eight years an assistant district attorney under Mr. Jerome.

It is said that the committee will meet again in two weeks for a further executive session, preparatory to the work of the public hearings.

The "Evening Post" View.

The "Evening Post" of this city usually has its own point of view. Editorially it said yesterday:

"One point seems to be settled by

the Legislative Investigating Committee. Its proceedings are not to be allowed to affect the course of the fall campaign one way or the other. Public hearings will not begin until August 30, and after September 1 no charges will be received against any man who is a candidate for re-election this year. This will not, of course, prevent disclosures that may result incidentally from the inquiries of the committee. Yet any criticism that the committee was being used for partisan purposes will be obviated. Although it gets under way slowly, it begins well. Its selection as assistant counsel of Alfred Hurrell, of the State Department of Insurance, who was the right-hand man of Mr. Hotchkiss in his recent fire insurance inquiry, will be welcomed as indicating an intention to go to the root of the insurance evils. Similarly will be received the appointment as actuary of Prof. Albert W. Whitney, of the University of California, a high authority on insurance. Whatever may or may not be discovered in the way of legislative or official corruption we may hope for a thoroughgoing reform in our fire insurance laws."

RAWN INSURANCE CLAIM.

The Coroner's jury in the case of Ira Griffith Rawn, president of the Monon Railway, found the following verdict:

"We, the jurors, sworn on oath to inquire into the death of Ira Griffith Rawn at his home at Winnetka, on July 20, find that he came to his death at 1.20 o'clock on the morning of July 20 from shock and hemorrhage caused by a bullet from his own revolver, fired by his own hand, but whether this was accidental or with suicidal intent this jury is unable to determine, except that the location of the wound and the type of revolver render the accident theory less probable."

The verdict was a compromise. Two of the six jurors held out for a long time for a verdict of suicide, and two of the others held strictly to the accident theory.

The extent of the interest of the casualty companies is indicated by the following schedule of policies:

Continental Casualty, \$5,000; February 17, 1907.

General Accident, \$5,000; March 16, 1909.

General Accident, \$5,000; April 21, 1906.

Travelers, \$10,000; September 28, 1908.

Maryland Casualty, \$10,000; April 1, 1910.

Casualty Company of America, \$25,-

000; May 22, 1909.

Maryland Casualty Company, \$10,000; May 22, 1909.

Employers Liability, \$10,000; May 2, 1909.

London Guarantee, \$5,000; May 22, 1909.

London Guarantee, \$5,000; December 3, 1909.

London Guarantee, \$5,000; February 21, 1909.

Pacific Mutual, \$10,000; February 6, 1910.

Standard Accident, \$5,000; December 2, 1909.

The face value of these policies totals \$110,000, but with accumulations the value amounts to \$135,000. A

policy for \$100,000 in the Fidelity and Casualty Company is said to have lapsed last year.

The first reports of the death of Mr. Rawn were that he had been killed by a burglar. The police, in a search on this theory, arrested a negro, who succeeded later in establishing an alibi.

New York's Conflagration Hazard.

ALLAN ROBINSON, president of the Allied Real Estate Interests, expressed, in an interview in "Municipal Facts," fear that New York City was in danger of a \$250,000,000 conflagration. In this interview he declared that such a fire would probably cause the ruin of all but a few of the fire insurance companies doing business in New York, and would bring a world-wide panic. Mr. Robinson asserted that the insurance men were in constant dread of a blaze of this size, and he further expressed the belief that a conflagration was "not such a remote possibility as some may have believed."

Elijah R. Kennedy, of Weed & Kennedy, takes exception to this view

of New York City and its possibilities in regard to fire.

"I don't see," said he, "how any rational being can contemplate the probability of such a conflagration here. New York City is better protected from fire to-day than any other city in the country or the business section of London or the old section of Paris. The fact that many business men have to seek insurance from outside companies merely means that there is a limit to the risks on merchandise which New York companies and those regularly authorized to do business here are willing to assume. It is not an indication of great fear, but of vast commerce.

"You know that in certain parts of the city there are blocks and blocks

where merchandise of great value is as congested as the population of the East Side tenements. The authorized companies are willing to risk only a certain amount on a given premises. So the merchant has to resort to foreign companies to make up the amount of insurance he needs. These outside companies are for the most part just as strong and reliable as the others.

"It is not true, either, that most of the insurance companies of New York would be forced to the wall by a \$250,000,000 blaze. They would have to sell their assets, to be sure, but just as in all the great fires so far the stockholders would put in more money, and most of the companies would go on as before."

Companies and Agents.

THERE is really little reason why such a thing as irony does not find room in a column of insurance publication on the subject upon which advertising underwriters differ strongly, except that usually such a phenomenon is often conspicuous by its absence. Caustic comment likewise is ordinarily reserved for the subjects upon which companies, agents, and brokers are in agreement, although at times brokers do not get quite the consideration of the other two classes. The "American Agency Bulletin" is widely known as the official organ of the National Association of Local Fire Insurance Agents. Subsequent to the formation of the Fire Underwriters' Union this publication, assuming that the interests of the agents and those of the companies are now always coincident, has undertaken to put forth the position of the agents, as it sees it, as follows:

"The companies have labored and brought forth a commission agreement. As revealed to the critical eye

it shows that the companies have amply provided for themselves, and will secure, if the agreement is adopted, the maximum of benefit. While the proposal of the reorganized or enlarged Eastern Union contains many features worthy of commendation, and which, if carried out, will benefit the business, yet there is a noticeable absence of anything which will immediately benefit the insured or the agents.

"From time to time the companies have taken advantage of current conditions to secure, or attempt to secure, a reduction in agents' commissions. In this case the plea put forward is the public agitation of the expense question, but the agreement proposed contains no arrangement for a general reduction in rates to the insured. It is therefore difficult to see what relation the matter has to public interest, other than affording the companies an opportunity to increase profits at the agents' expense.

"It is claimed that this agreement is a good thing for local agents, in-

asmuch as it proposes a limitation and control of brokerage to be paid. Admitting that there is some benefit in this feature, when all is said, the fact remains that the companies propose to reduce the commissions of a very large number of their agents, and to deprive the balance of any hope of increased income through a contingent or graded commission.

"In return, they offer nothing. Dual and multiple agents, side liners, part time men, soliciting and non-recording agents remain to swell the income of the companies and reduce that of the local agents. The public demand is not for poorer-paid and less efficient agents, but for fewer hangers-on and better local representatives.

"The expense question undoubtedly needs correcting. There is graft and waste in official salaries and home office charges, State taxes and commissions, which should be eliminated; but the reform thus far proposed is entirely at the expense of the real underwriting agent, and—with the possible exception of brokerage—does

not touch the graft and waste features at any point.

"The companies have had their opportunity and have shown it to be their purpose to use the occasion for their utmost benefit. This is their privilege. Now the agents will be heard, and we trust their voice will be sufficiently strong to secure essential changes, and in particular, to induce the companies to take their share of the 'medicine' and cut out the barnacles."

HERE AND THERE.

In accordance with a decision of a Montreal court last winter to the effect that insurance companies were, in the Dominion of Canada, exclusively under provincial rather than Dominion jurisdiction, a stated case will be submitted by the Dominion government to the high court of the Dominion. When the new insurance act was before Parliament at Ottawa at its last session the point was raised that, according to the Montreal decision just referred to, the whole act might be ultra vires, and that the provincial government alone might have the right under the British North America Act to issue licenses and force penalties. For more than forty years the jurisdiction of the Dominion Parliament over insurance companies doing a general business throughout Canada, has not been questioned.

The requisition on the stockholders of the old Greenwich Insurance Company of New York to pay in 68.67 per cent. of the par value of each share to make up the impairment, will expire on the twenty-first of this month. Arrangements are being made for outside payment in return for stock in the case of all assessments not paid by the old stockholders, and it is expected that the old Greenwich will be writing again in September.

Le Gage Pratt has severed his connections with the Puritan Life Insurance Company of Providence, R. I., because of his election as manager of a new life insurance company, now in process of organization in Cuba, under the title of Compania Nacional de Seguros de Cuba, with headquarters at Havana, and a half million dollars' capital and an equal surplus.

George F. Coar has been elected assistant secretary of the Pennsylvania Casualty Company, with which he has been associated for the last ten years.

The British Board of Trade has issued a report, containing the filed statements required by the British Government from insurance companies for the year 1908, under the employers' liability companies' act of 1907. There has been no substantial advancement in rates since 1908, and competitors' conditions have remained about as keen. Consequently the figures relating to profits and losses about represent present conditions. Thirty-five tariff companies show premiums received, amounting to slightly more than £2,000,000, on which the

margin of profit realized amounted to about £41,000, or 2.02 per cent. of the premiums. Thirty non-tariff companies took in premiums amounting to £570,000, and suffered a loss in their trading account of £8,000, or 0.31 per cent. of their premium income.

General Manager James Allan Cook of the Scottish Union and National Insurance Company will arrive at Quebec this week. He will be met there by Manager James H. Brewster and will tour Canada.

In New England.

A NNOUNCEMENT was made last Saturday that Charles W. Fletcher, deputy insurance commissioner of Massachusetts, had resigned that position as of September 1 next, in order to accept the important post of controller and assistant treasurer of the Massachusetts Bonding of Boston, to which he was elected about two weeks ago. Mr. Fletcher was identified with the Maine Insurance Department at the time of its organization in 1889, and became deputy commissioner in 1895. In March, 1905, the late Mr. Cutting appointed him examiner for the Massachusetts department, and in December, 1907, he was promoted to the position of deputy commissioner. The Massachusetts Bonding is fortunate in securing the services of such a man as Mr. Fletcher, who unites with a power of keen analysis the faculty of clear and convincing statement, and is personally amiable withal.

As to "Freezing Out" by Fraternals.

Time was when the average daily paper was loud in its praises of "fraternal" insurance and grudging, if not denunciatory in its allusions to the level premium companies. How times have changed is evident from the subjoined extract from the Salem, Mass., "News," which, while coming naturally to the false conclusions of the inept (which will be readily recognized by our readers), still shows a lively appreciation of the perilous condition in which these unscientific fraternal co-operatives find themselves. We have permitted ourselves to bold type a few words that betoken the awakening of discernment:

"The 'New Bedford Standard' speaks of the 'freezing out' process in fraternal insurance organizations. There has been altogether too much of it, and it spells ruin for some of them. The Arcanum was a shining example of the 'freezing out' process

five years ago, and the Workmen another. There have been others. The reason is that, after members have been in these organizations for thirty or forty years and got along where they are too old to secure insurance in a regular insurance company, the younger members combine and load them down with assessments, intending to drive them out and take advantage of all the money these older members have paid in for years. If an organization finds that its assessments are too low, **and most of them start that way**, then rates should be raised. But when the increase is made it should be just to the older members as well as the younger ones. But the younger members do not allow this; they place the entire burden on the older ones. No consideration is given to all the years the older ones have been paying in their money. They do not assess these older members what they ought to have paid at the age they were when they joined, but they assess them at the rate they would pay if they were joining today, which, of course, is unfair. No one of them would join an organization and pay the rate, but they are there and too old to get insured anywhere else. All their savings may be in the assessments they have paid this organization, and they are forced to remain and submit to the injustice, hard as it is. That is why the younger element pushes up their assessments, knowing full well that it is pay or get out."

New England Brevities.

The Phoenix of London has appointed Herbert J. Hill special agent for Connecticut and Rhode Island, beginning with September next. Mr. Hill has been New England special for the Milwaukee Mechanics for the past eight years.

Charles G. Smith has been elected actuary of the Savings Bank Insurance

League of Massachusetts, succeeding Harwood E. Ryan, now identified with the New York insurance department. Mr. Smith has been engaged in life insurance business for several years, and, prior to his latest appointment, was actuary of the Puritan Life of Providence.

An industrial insurance, old age and service pension system has been established by the Cheney Brothers, silk manufacturers of South Manchester, Conn.

Apparently Jeremiah J. McCarthy has ceased to be an issue in the matter of the fire commissionership of Boston. The department appears to be scraping along in its ordinary way, with Attorney Carroll in nominal and that splendid fire general, Chief Mullen, in actual charge.

The Maryland Casualty Company has made the following appointments, completing the organization of its fidelity and surety department: Contract Section—D. H. Hatburn, Jr., superintendent; Howard H. Nusz, chief clerk, and F. Highland Burns, adviser. Fidelity Section—H. E. McClellan, superintendent; H. D. Ward, chief clerk; J. H. Stone, adviser. Judicial Section—R. M. Ross, superintendent; Frank E. Shorey, chief clerk, and Charles W. Maydwell, adviser. The company has a license now to write fidelity and surety bonds in forty States.

At an annual meeting of the policyholders of the Franklin Life Insurance Company of Springfield, Ill., a consolidation of that company with the La Salle Life of Chicago was affected, the consolidated company to be known as the Franklin Life, and to take over all the assets and liabilities of the La Salle Life. It is understood that the La Salle Life was formed with the ultimate intention of bringing about this merger, and in this way putting the Franklin Life on a stock basis.

THE CHRONICLE CO., Ltd.,
90 Williams Street, New York

The Texas Situation.

IN discussing Governor Campbell's message, the Dallas "Morning News" says: "'Defective,' 'inadequate' and 'insufficient' are the adjectives chosen by Governor Campbell to express his disapproval of the fire insurance law, which now he wants repealed. The tautological quality of the governor's denunciation would suggest a high degree of contrition for his part in its enactment. But on reading further one gets the notion that the very signal failure of this statute has been due solely to the greed and perversity of the wicked insurance companies. The candid confession of one paragraph is pretty much retracted in the next. In one breath we are asked to believe that it is all the fault of the law, and in the next that it is all the fault of the insurance companies. The possibility that some blame attaches to the board that has had the execution of the law is nowhere adverted to.

"That Governor Campbell has yielded to the temptation to be both illogical and disingenuous is probably the result of his desire to generate within the legislature such a degree of indignation against the insurance companies as will incite it to do those very dire things that he recommends. Let one insurance company intimate that it may conclude to withdraw from the State, and Governor Campbell would have the intimation construed as a threat intended to dominate legislation, for which he suggests as a punishment that it be forever thereafter barred from doing business in the State. Yet even that far reach does not mark the bounds of his indignation; he would have an insurance company which does withdraw exiled forever! It occurs to us that if the State may do either of these things it may take the one fur-

ther short step and enact that all insurance companies now doing business in the State must continue perpetually to do so at whatever rates the State may prescribe. The idea that a company which prefers not to continue in business in Texas thereby affronts the dignity of the State in so flagrant a way as to deserve perpetual banishment is grotesque, to say the least of it.

"Governor Campbell's recommendations as to legislation to supersede the act he wants repealed are vague it seems to the 'News.' Rather forcefully he exemplifies the fact that it is much easier to describe what is desirable than it is to prescribe the means of getting it. After repealing the existing law he would have another enacted preventing combinations 'to destroy competition,' that to be buttressed with another statute regulating and controlling fire insurance companies' and regulating and fixing rates. The further use of all existing 'key rates' is to be forbidden indiscriminately, notwithstanding some of them may be in all respects fair. Those recommendations, it seems to us, are highly enigmatic, if not contradictory. The only clew to the governor's purpose we can gather is that he would empower a State board to prescribe maximum rates, and then allow, or perhaps even compel the insurance companies to write at lower rates. There can be no competition without discrimination, so that a legal contraption of this kind would merely restore by mean of political machinery conditions which previously obtained as a result of natural forces. It seems to the "News," therefore, that of the three recommendations which Governor Campbell makes respecting insurance matters, all but the first one are superfluous as well as

futile. The first of these recommendations is: 'The passage of a bill repealing' the fire insurance rating law."

SAN FRANCISCO'S

WATER SUPPLY.

The "San Francisco Examiner" in a recent editorial says:

"Bids for laying the pipe of the so-called auxiliary fire system have been secured within the city engineer's estimates. For the district between Market street, Powell street and the harbor front the estimate was \$135,000, the lowest bid \$129,000.

"Every effort should be made to put through the laying of the pipes and the building of the pumping works in the shortest possible time. They are needed for the safety and comfort of the city.

"The Spring Valley Water Company refuses to provide a larger water supply unless it is given a lot more money and the underwriters and property owners tell us that the city may burn up again if a better supply is not had. The facts are all right, but the argument based on them is all wrong. The logical conclusion is not that we should pay Spring Valley a big sum to bring in a little more water from its reservoirs. The thing to do is to put at the service of our fire fighters the inexhaustible supplies that wash the shores of the city.

"The system should be pushed forward to completion with the utmost energy. Wherever it is extended it will mean safety from conflagration. No great fire can get under headway where a few lines of hose can flood a block of buildings in a brief time. And with this guaranty against conflagration will come a lowering of the insurance rates sufficient to meet all the interest and sinking fund charges on the bonds issued to pay for the work."

RICHARD D. HARVEY, Assistant General Manager.

INDUSTRIAL INSURANCE IN GERMANY.

By ROBERT J. THOMPSON,
United States Consul at Hanover.

TWENTY-SIX years have passed since the first of the workmen's insurance measures, the sick benefit law, was enacted. A year later followed the insurance bill for accidents in industry, in 1886 the bill for accidents in agriculture and forestry, in 1887 the building trades and marine accident insurance law, and in 1889 the old-age pension law.

The insurance of all workmen, including apprentices, is compulsory, employer and employe being obliged to pay fixed premiums, as established by law, and the government contributing a certain amount. From 1885 to 1907 the employers contributed \$973,300,000, the workmen \$851,587,500, and the government \$121,662,500, a total of \$1,946,550,000. In 1906 out of every 1,000 day laborers 863 were protected by sick benefit, all of them against accident, and 859 against old age and disability.

In 1907 there were about 23,000 offices for managing the sick fund; the number of insured was 12,900,000, having increased 27 per cent. in seven years; the premiums rose from \$45,957,800 to \$74,851,000 in six years, and the fund amounted to \$60,309,200, or about \$4.66 per capital. Of the total receipts in 1906, \$74,851,000, there was paid out \$67,235,000 for sickness, medicine, medical service, assistance to relatives, hospitals, recuperation, and funerals. In 1906 the workmen paid \$48,909,000 to the fund and received \$63,379,400 (128 per cent.) as insurance. The total number of cases was 4,950,000, or 41 to every 100 insured. There has been a constant in-

crease in the number of cases, but this is to be attributed rather to the greater readiness of the workmen to apply for assistance than, to what would appear on the surface, an abnormal increase of disease. The expense of treating patients has also increased from year to year, having risen from \$10.35 per case in 1900 to \$13.14 in 1906.

Among other things these statistics substantiate the well-known fact that disease seeks its victims chiefly in the more poorly paid classes of wage-earners—the lower the wages the higher the number of victims. In Stuttgart in 1907 and 1908, 29.4 per cent. of all patients died of tuberculosis; Berlin reports show similar facts; all other complaints represent only a small percentage, proportionately, of the causes of death.

Accident Insurance.

More than 9,000,000 persons in industry and 11,000,000 in agriculture and forestry are protected by accident insurance. The amount paid out in 1907 was \$35,771,400. The number of accidents has multiplied beyond all expectations, since modern industry makes it necessary for work to be done with great speed; yet the precautions and guards instituted are unprecedented. Then again other factors account for the high figure of 662,901 accidents reported in 1907. More and more accidents, even insignificant ones formerly disregarded, are now brought to the notice of the bureau and physicians. Furthermore, the industrial army of Germany has increased 2,500,000 in six years, be-

ing recruited from the inhabitants of the agricultural districts—that is to say, from persons who for the first time become acquainted with factory life and who must be trained. That accidents otherwise avoidable result is quite plausible. The number of persons who, in 1907, received an indemnity for the first time was 144,708. These, together with those whose indemnity continued from the preceding year, reached the startling figure of approximately 1,000,000. The mortality per 1,000 insured in 1907 was as follows for the several callings: Inland navigation, 2.45; mining, 2.39; teaming, 1.24; railroading, 1.16; textile industry, 0.00. Complete disability ranged from 0.45 to 0.01 in glass-works, brickyards, and wood and textile industries; partial disability from 5.25 in iron and steel works to 1.42 in the glass and brick industries. The number of accidents causing permanent disability has remained practically at the same height since 1900—1,356.

The very young and the old naturally suffer much more from industry, the former through inexperience and heedlessness, the latter owing to the impossibility of fulfilling the demands of the machine—speed and a quick eye and hand. Perhaps the old suffer also through unwillingness to renounce the work that in their youth they were capable of performing with distinction. Thus it is found that with rising age the frequency of accidents increases disproportionately. The greatest percentage takes place between the

(Continued on Page 14.)

IT PAYS THE AGENT

To represent the best company. There are many excellent standard life insurance companies. Which is the best? In stability, progressiveness, liberal contracts to agents and low cost to policy-holders no company surpasses

ANCIENT AND MODERN.

Eli Bates, sixty-six years old, who was chief of the New York Fire Department from 1873 until 1884, and who was a volunteer fireman twenty years before he joined the department, visited Commissioner Waldo at his office on Monday and had an interesting chat about past and present conditions in fire fighting.

The Commissioner took him through Fire Hall and showed him the improved system of alarms and signals. The old chief seemed delighted with his visit and congratulated the Commissioner on the general appearance of things. Mr. Bates, who lives at 236 Fulton street, Jersey City, draws a pension from the city of \$2,350 a year.

LIABILITY MEN GO SLOW.

(Continued from Page 1.)

pulsory compensation upon employers for injuries to employes. Both of these laws go into effect on September 1 and underwriters are striving to so perfect their plans and purposes that their assured may be properly protected when these two new laws go into effect. The experience statistics of all liability insurance companies doing business in this State, including the conference and non-conference companies, will be brought down to date and will be coupled with the advices of the insurance companies' attorneys, all to be used as a basis for rates under the changed conditions.

A careful summary of the two new laws in this State follows:

Employers' Liability Act.

The act provides that when personal injury is caused to an employe who is himself in exercise of due care and diligence at the time, by reason of any defect in the condition of the ways, works, machinery or plant connected with or used in the business of the employer, which arose

from, or had not been discovered or remedied owing to the negligence of the employer or any person in the service of the employer, and entrusted by him with the duty of seeing that the ways, works, machinery or plant were in proper condition.

2. By reason of the negligence of any person in the service of the employer, entrusted with any superintendence, or by reason of the negligence of any person entrusted with authority to direct, control or demand any employe, in the performance of the duty of such employe. The employe, or in case the injury results in death, the executor or administrator of the deceased employe, who has left him surviving a husband, wife, or next of kin, shall have the same right of compensation and remedies against the employer as if the employe had not been an employe of nor in the service of the employer nor engaged in his work.

If any employer enters into a contract, written or verbal, with an independent contractor to do part of such employer's work, or if such contractor enters into a contract with a sub-contractor to do all or any part of the work comprised in such contractor's contract with the employer, such contract or sub-contract shall not bar the liability of the employer for the injuries to the employes of such contractor or sub-contractor, caused by any defect in the condition of the ways, works, machinery or plant, if they are the property of the employer, or are furnished by him, and if such defect arose or had been discovered or remedied through the negligence of the employer or of some person entrusted by him with the duty of seeing that they were in proper condition.

The words of the preceding two paragraphs were not contained in the former employers liability act. The chief point of difference between the old and new act, with regard to the

section above quoted, is that under the old act the employer was liable for the negligent act of one employe causing injury to another, only when the first employe was exercising superintendence. Under the new act he is liable to one employe for an injury caused by the negligence of any person entrusted with authority to direct, control or command any employe, whether or not at the time when such injury was caused such person was "exercising superintendence."

The new act provides that no action shall be maintained under the act unless notice of the time, place and cause of the injury is given to the employer within 120 days. It also provides that if such notice does not apprise the employer of the time, place or cause of injury, he may, within eight days after service thereof, serve upon the sender a written demand for a further notice, which demand must specify the particular in which the first notice is claimed to be defective, and the failure by the employer to make such demand as herein provided shall be a waiver of all the defects that the notice may contain; after service of such demand as herein provided, the sender of such notice may at any time within eight days thereafter serve an amended notice which shall supercede such first notice, and have the same effect as an original notice hereunder.

The effect of this section is to make it impossible for the employer to take advantage of any defect which the first notice may contain. Under the old act the employer could escape liability if he could prove that the notice was defective. Under the new act he must point out to his employe wherein the notice is claimed to be defective, and the employe may serve a new notice remedying such defects.

With regard to contributory negligence and assumption of risk the new act provides that in an action brought to recover damages for personal in-

juries, or for death resulting therefrom, received after this act takes effect, owing to any cause, including open and visible defects, for which the employer would be liable but for the hitherto available defense of assumption of risk by the employee, the fact that the employee continued in the service of the employer in the same place and course of employment, after the discovery by such employee or after he had been informed of the danger of personal injury therefrom, shall not be as a matter of fact or as a matter of law an assumption of the risk of injury therefrom, but an employee or his legal representative shall not be entitled under this act to any right or compensation or remedy against the employer in any case where such employee knew of the defect or negligence which caused the injury and failed, within a reasonable time, to give or cause to be given, information thereof to the employer, or to some person superior to himself in the service of the employer, or who had entrusted to him some superintendence, unless it shall appear on the trial that such defect or negligence was known to such employer or superior person, prior to such injury to the employee; or unless such defect could have been discovered by such employer by reasonable and proper care, test or inspection. The new act also provides that on the trial of any action brought by an employee or his personal representative to recover damages for negligence arising out of and in the course of such employment contributory negligence of the injured employee shall be a defense to be so pleaded and proved by the defendant. Heretofore if it could be proved that a workman consented to work at a machine which had become dangerous even if the employer was informed of the danger the workman's right of action was barred. Under the new act it is not.

Heretofore it has been necessary

for an injured employee to prove that he himself was free from contributory negligence before he could recover. Under the new act it is provided that contributory negligence of the injured employee shall be a defense to be so pleaded and proved.

Compulsory Compensation Act.

This act takes effect on the first of September, 1910.

It applies to workmen engaged in the following employments:

1. The erection and demolition of any bridge or building in which there is or in which the plans or specifications require iron or steel framework.

2. The operation of elevators, elevating machines or derricks, or hoisting apparatus used within or on the outside of any such bridge or building for the hoisting of materials for such erection.

3. Work on scaffolds of any kind elevated twenty feet or more above the ground, water, or floor beneath, in the erection, construction, painting, alteration or repair of buildings, bridges, or structures.

4. The construction of tunnels or subways.

5. All work carried on under compressed air.

6. Construction, operation, alteration or repair of wires, cables, switchboards or apparatus charged with electric current.

7. All work necessitating dangerous proximity to gun powder, blasting powder, dynamite or any other explosive, where the same are used as instrumentalities of the industry.

8. The operation of steam railroads of locomotives, engines, cranes, motors or cars propelled by gravity or steam, electricity or other mechanical power, or the construction or repair of steam railroad tracks and roadbeds over which such locomotives, engines, trains, motors or cars are operated.

If, in the course of any of the em-

ployments above described, personal injury by accident arising out of and in the course of the employment, is caused to any workman employed therein in whole or in part, or the damage or injury caused thereby is in whole or part contributed to by (a) a necessary risk or danger of the employment or one inherent in the nature thereof, or (b) failure of the employer of such workman or any of his or its officers, agents or employees, to exercise due care or to comply with any law effecting such employment, then such employer shall not be liable to pay compensation as hereinafter explained, provided that the employer shall not be liable in respect of any injury which does not disable the workman for a period of at least two weeks, from earning full wages at the work at which he was employed, and provided that the employers shall not be liable in respect of any injury to workmen, which is caused in whole or in part by the serious and willful misconduct of the workman.

If the employee has a right of action for damages caused by any such injury at common law, or under any statute in force on January 1, 1910, his right of action is not taken away by the act, but in case the injured workman, or in the event of his death his executor or administrator, shall take advantage of the workman's compensation act, either by accepting any compensation under that act, or by beginning proceedings to recover compensation under that act, he shall be barred from recovery in every other action at common law or under any other statute on account of the same injury. In case after such injury the workman, or in the event of his death his executor or administrator, shall commence any action at common law or under any statute other than the workman's compensation act, against his employer, he shall be barred from all benefits un-

der the workman's compensation act.

No proceedings for compensation under this act shall be maintained unless notice of the accident has been given to the employer, as soon as practicable after the happening thereof, and before the workman has voluntarily left the employment in which he was injured, and during such disability, and unless claim for compensation has been made within six months from the occurrence of the accident or in case of the death of the workman, or in the event of his physical or mental incapacity within six months after such death or the removal of such physical or mental incapacity; or in the event that weekly payments have been made under the act, within six months after such payments have ceased, but no want or defect or inaccuracy of a notice shall be barred to the maintenance of proceedings unless the employer proves that he is prejudiced by such want, defect or inaccuracy. Notice of the accident shall apprise the employer of the claim for compensation under this article, and shall state the name and address of the workman injured, the date and place of the accident, and in simple language, the cause thereof, if known. The notice may be served personally or by sending it by mail in a registered letter, addressed to the employer at his last known residence or place of business.

If death results from injury, the amount of compensation shall be as follows: If the workman leaves any widow, children, or parents at the time of his death, then wholly dependent on his earnings, a sum which shall compensate them for loss, but not more in the aggregate than twelve hundred times the daily earnings of such workman at the rate at which he was being paid by such employers at the time of the injury, and in no event more than \$3,000. Any weekly payments made under the act shall be deducted in ascertaining such amount.

If such widow, children or parents, at the time of the workman's death, are in part only dependent upon his earnings they shall be paid such proportionate sum, not exceeding that provided in the preceding paragraph, as may be determined according to the injury to such dependent.

If the workman leaves no dependent the employer shall pay the reasonable expense of his medical attendance and burial, not exceeding \$100.

If total or partial incapacity for work at any gainful employment results to the workman from the injury he shall receive a weekly payment commencing at the end of the second week after the injury and continuing during such incapacity, not exceeding 50 per cent. of his average weekly earnings, when at work on full time, during the preceding year, during which he shall have been in the employment of the same employer; if he shall have been in the employment of the same employer for less than a year, then a weekly payment of not exceeding three times the average daily earning on full time for such less period. In fixing the amount of the weekly payment, regard shall be had to the difference between the amount of the average earnings of the workman before the accident and the average amount he is able to earn thereafter as wages in the same employment or otherwise. In fixing the amount of the weekly payment, regard shall be had to any payment, allowance or benefit which the workman may have received from the employer during the period of his incapacity, and in the case of partial incapacity the weekly payments shall in no case exceed the difference between the amount of the average weekly earnings of the workman before the accident, and the average weekly amount which he is earning or able to earn, in the same employment or otherwise, after the accident, but

shall amount to one-half of such difference. In no event shall any compensation paid under the act exceed the damage suffered, nor shall any weekly payment payable under this article in any event exceed \$10 a week or extend over more than eight years from the date of accident.

Any workman entitled to receive weekly payment under the act is required, if requested by the employer, to submit himself for examination by a duly qualified medical practitioner or surgeon, provided and paid for by the employee, within three weeks after the injury, and thereafter at intervals not oftener than once in six weeks. If the workman refuses to submit to such examination, his rights to weekly payments shall be suspended until such examination has taken place, and no compensation shall be payable during or for account of such period.

In case an injured workman shall be mentally incompetent at the time when any right or privilege accrues to him under the act, a committee or guardian of the incompetent, appointed pursuant to law, may, on behalf of such incompetence, claim and exercise any such right or privilege with the same force and effect as if the workman himself had been competent and had claimed or exercised any such right or privilege, and no limitation of time in the act shall run so long as said incompetent workman has no committee or guardian.

Any question which may arise under this act shall be determined after by agreement or by an action at law. If the employer fails to pay the compensation provided for by the act the injured workman or his committee or guardian, or executor or administrator, may then bring action to cover the compensation provided for in that act. A judgment in such action, if in favor of the plaintiff, shall be a lump sum equal to the amount of payments then due, and respectively due under the act.

The Mackinac Meeting.

THE meeting of the Detroit Conference at Mackinac Island last week was in every way a success. Like every other organization, the Detroit Conference has its troubles. More than once during the meeting members were reminded that they were not living up to their obligations in all cases. Occasionally there are charges of bad faith among the members, but these do not prevent this from being the most efficient among the casualty organizations. If everything ran too smoothly the Detroit conference might lose its reason for existing and become a social organization.

Taken altogether the papers were of a very high order, and covered a range of subjects from workmen's compensation, through law, medicine and agency development to professional ethics.

The conference companies are confronted with a serious situation and the most important action at this time was taken with a view to meeting that situation. Accident and health underwriters are "up in the air" over the laws of Massachusetts and New York, which require the filing by September 1 of new policies complying with the new standard provision laws of those States. The departments of these two States will collaborate in examining these policies and will pass no opinions on them until both have gone over them. The experience of one company which did get a policy passed upon several weeks ago by the New York department does not give promise of an easy time. This company had a carefully prepared contract which was approved by the Minnesota commissioner and was believed by the company to comply with every provision of the New York

law. The department, however, pointed out eleven distinct points in which it did not comply with the law. These accident and health companies must file their policies by September 1, wait till they are passed upon, then correct them if necessary and be ready to issue the new contracts January 1. It means very fast work.

These new laws in themselves would require the Detroit Conference companies which operate in either State to get out new policies, but there is another incentive. There has been a tendency to vary slightly from the conference form of 1907 and one prominent company has gone so far in its variations that its action cannot be ignored. The companies are far from wanting a competitive scramble in liberalizing contracts. The company whose policy has caused concern has agreed to abide by a new conference form, so it was decided at this meeting to get one out and do it as quickly as possible. Every member which has views will submit them to the secretary. The executive committee will then embody as many of them as it seems advisable in the new policy and at the same time will endeavor so to draw it that it will comply with the New York and Massachusetts laws and those of many other States as possible. Then when the conference, at a called meeting, has adopted it, each company operating in the two States mentioned or in either will submit its policies of the conference form to be judged as to its compliance with the law. A sub-committee of the executive committee will handle this matter and will notify each company what changes are ruled to be necessary in the conference form.

One provision likely to be put in the new form is one automatically reducing benefits at the age of 50, and

probably at other later ages. This is to obviate the present crude and inequitable plan of charging a man who takes a policy at age 40, \$1 a month as long as he keeps it, while another who takes an identical policy at age 51 pays \$1.50 a month for it as long as he keeps it.

Another important move taken at this meeting which marks a change in policy was the amendment of the by-laws so as to make all ex-presidents members of the executive committee. So far the conference has been led by the men who pioneered the monthly payment accident and health business. They are older than they were when it started and recognize that if the conference is to continue to progress and keep up its usefulness important duties must be assigned to younger men; it must get in young blood, in other words. Therefore it is purposed more and more to push young men to the front, while at the same time the patriarchs in the business will have a steadying effect as members of the executive committee.

Men best informed in the industrial disability business look for marked changes in the near future. It is hardly regarded as possible that all the States will enact similar standard provision laws. One underwriter expects that within a few years companies will be obliged to issue different policies for most of the States. The present movement towards workmen's compensation is expected also to have a marked effect on the industrial disability business. On this account managers of companies are studying the subject very carefully. One of the best papers at the convention was on the subject of factory insurance as a cure for the unsatisfactory situation growing out of the pres-

ent employers' liability laws. The question of adjustments has always been an important one in the Detroit Conference and it had a prominent place in a paper at this meeting. Along somewhat similar lines was another paper giving the rules of law applying to the various exceptions in accident and health policies, as gleaned from numerous decisions. While the latter was purely legal the former treated also of the iniquities of ambiguous policy forms and the effect of profit sharing contracts with agents on claims.

A paper on venereal diseases and the discussion of the results of insuring foreigners who do not understand the English language brought out some valuable medical and underwriting information. With scarcely an exception the companies have had a very bad experience with raw continental foreigners. This is ascribed not alone to their ignorance of English, but to their manner of living and also to a moral hazard which is often found to exist.

The Detroit Conference companies are little, if any, better about reporting data for the preparation of a new manual and classification than are the members of the International Association of Accident Underwriters about reporting health statistics. The committee on new manual having failed to accomplish anything for want of more complete data was, at its own request, discharged.

The companies, as a rule, are not making much use yet of the bureau for keeping track of agents. Some have reported to it the agents who have left their service for any cause, but only one request for information about an agent was received during the past year.

Socially the convention was a delight. Mackinac Island was at its best. The weather was perfect. The drive around the island, the progressive euchre party, the steamer trip to

St. Ignace and the banquet were all exceedingly enjoyable. Thirty companies out of the fifty-two comprising the membership were represented by from one to three men each.

The following officers were elected: President—C. H. Boyer, General Accident.

First Vice President—L. O. Chatfield, Phoenix Preferred Accident.

Second Vice President—P. Lay Thompson, National Life and Accident.

Secretary—L. G. Brown, Continental Casualty.

Treasurer—C. H. Brackett, Hoosier Casualty.

Executive Committee—William H. Jones, chairman, Equitable Accident; A. E. Forrest, North American Accident; Reinhold R. Koch, American Assurance; J. B. Pitcher, United States Health and Accident; Harvey H. Shomo, American Casualty; Herman A. Behrens, Pacific Mutual Life, and Frank L. Miner, Bankers' Accident.

AT THE GENERAL COURT OF SCOTTISH WIDOWS.

At the ninety-sixth annual general court of the Scottish Widows Fund Life Assurance Society, held recently in Edinburgh, Secretary J. G. C. Cheyne had this to say in regard to the passage by parliament of the Assurance Companies Act:

The most important event in the political world, as regards insurance offices, has been the passing of the Assurance Companies Act. This act, I may say, applies also to fire and accident companies, and the new provisions as regards life assurance offices are not of great importance, but so far as they go they are improvements on those of the older act passed in 1870. That act was based on the theory that the offices should be required to furnish such particulars as would enable the public, with the help of skilled advice, to judge if the finances of these companies were thoroughly sound, while at the same time all interference by government in the

management of the offices, as is practiced in America and some of our colonies, should be avoided. In fact, it was founded on the principle of publicity without government control. It has, however, been found in practice that the amount of information which the 1870 act required is not quite sufficient. As regards particulars of the liabilities of the offices, no amendment of the consequence was necessary, but fuller particulars were desirable as to the valuation of the assets; and the new act provides that these shall be furnished. I may say that, in our last investigation report we practically, in anticipation, complied with the new provisions in regard to this point. The Scottish Widows Fund will, I may say, be really affected only by one of the clauses of the act, namely, that which provides that every insurance company shall have an investigation once in every five years, or at such shorter intervals as may be arranged. You are aware that our investigations have hitherto been made at intervals of seven years, but they will now be made at intervals of five years at the longest. The directors, however, had—before the bill was brought forward—practically decided to recommend the adoption of a shorter investigation period, so that the act has merely made obligatory what they would probably have carried into force without such compulsion.

GLOBE SURETY STARTS.

Frank Blake, superintendent of the Missouri Insurance Department, has issued a license with the Globe Surety Company of Kansas City, to transact Federal and surety bonding and casualty insurance. The Globe has a capital of \$500,000 and a surplus of \$100,000. Its officers are: President, Thomas M. Walker; vice presidents, James Van Buren, John R. Mulvane and J. Z. Miller, Jr.; treasurer, W. T. Kimper, and assistant secretary, H. P. Fones. The Globe Surety will take over and reinsure the surety business of the Commercial Trust Company of Kansas City. It intends to enter the Middle and Western States, and eventually to write casualty lines as well.

TWO LONDON PROMOTIONS.

The Gresham Fire and Accident Insurance Society of London is being organized with capital of £500,000 by the Citizens Life Insurance Society of London. The capital is divided into 200,000 management shares of £1 each and 300,000 ordinary shares of £1 each. One hundred thousand management shares have been subscribed for at par, and will be paid up in full by the Gresham Life. It is intended that the balance of the management shares should be subscribed for by that society as and when issued. The ordinary shares will rank equally as to dividend and capital with the management shares to the extent of the amounts paid up, and from the respective dates fixed for payment. The management shares carry three votes for each share, and the ordinary shares one vote for each share, which means that the Gresham has absolute control under any circumstances.

At the present time 200,000 ordinary shares are being offered at par, and it is proposed to call up 10s per share. The directors of the Gresham Life are directors of the fire and accident company. The new company will commence business under favorable conditions, being associated with an organization and agency staff which

have been built up during the last sixty years. It is intended to make application for membership of the fire offices committee and of the accident office's association.

Alexander Lawson, at present assistant general manager of the Gresham Life, has been appointed manager and secretary of the Gresham Fire and Accident.

Thomas Brand Miller, for many years past manager of the Guardian's branch at Manchester, has been appointed fire manager of the new Gresham Fire and Accident. Thomas A. Polson, who has been connected with the Ocean Accident office as manager at Belfast, has been appointed manager of the accident, burglary, etc., branch of the new society. E. W. Brown has been appointed secretary and James H. Scott will be general manager and principal officer of both the Gresham Life and Gresham Fire and Accident Insurance Societies.

The London County Commercial Fire and Accident Office, Limited, of London, is being organized with a capital of £250,000 to transact fire, accident, burglary, plate glass, marine, fidelity and general insurance.

INJURY OF A MINOR**JUST BEFORE MAJORITY.**

The "Review" of London gives the following account of the case of Evans against Vickers, Sons & Maxim, Ltd., before the House of Lords:

This appeal under the Workmen's Compensation Act was heard on June 14 and 15, the result of which was to affirm a decision of the Court of Appeal as to the rate of compensation payable to a workman who was trained as a skilled artisan, but was injured whilst employed as a casual laborer and under 21 years of age.

The applicant was a stove-grate fitter. In July, 1907, when under 21 years, he entered the service of Vickers, Sons & Maxim as a laborer, during temporary unemployment, intending to return to his former occupation when trade improved. He was injured by accident arising out of and in the course of his employment by Vickers, Sons & Maxim, and they agreed to pay him compensation at the rate of 11s. 4d. per week. Having recovered sufficiently for light work, he was in February, 1909, employed in the same service at 22s. a week, the rate of wages which he was receiving at the time of the accident, and his compensation was then reduced to a nominal sum of one penny a week. In August, 1909, having attained 21, the applicant under clause 16 of the first schedule of the act of 1906 for a review of the weekly payment, relying on the proviso that "Where the workman was at the date of the accident, under 21 years of age, and the review takes place more than 12 months after the accident, the amount of the weekly payment may be increased to any amount not exceeding 50 per cent. of the weekly sum which the workman

would probably have been earning at the date of the review if he had remained uninjured, but not in any case exceeding one pound."

The judge of the Sheffield County Court found that the applicant as a stove-grate fitter would have been able to earn 30s. a week and increased the weekly payment of one penny to 7s. 6d. a week.

The Court of Appeal by a majority affirmed the decision of the County Court judge.

The employers appealed to the House of Lords who affirmed the decision of the County Court judge and the Court of Appeal.

The Lord Chancellor agreed with the conclusion which had already been arrived at, having regard to the terms of the Act of Parliament. The standard by which the weekly payments were to be measured was generally speaking, the average weekly earnings during the period of the workman's actual employment under the same employer; but in the case of a minor, clause 16 of the first schedule made special provision for a review of the weekly payment, and the only question was "What would the workman probably have been earning?" Their lordships had not to consider what the act ought to have said, but its actual

terms, and they could not read into the statute words which it did not contain.

Lord Macnaghten, Lord James of Hereford, and Lord Collins concurred. Appeal dismissed with costs.

L. H. VAIL'S DEFENSE.

The trial of Louis H. Vail, president of the Dutchess Insurance Company of Poughkeepsie, who is accused of forgery, has been set down for September 12. In the latter part of last week Milton A. Fowler, vice president of the company, who is more than eighty years old and very feeble, was examined before the Vail trial, on account of the precarious condition of his health. During the course of this examination it developed that Mr. Vail's defense on the charge of forgery, based on cutting out a resolution in the company's minute book, would probably be that it was never adopted, and that, therefore, cutting it out did no harm and could not constitute a crime. The resolution, alleged to have been cut out, had to do with fixing the reinsurance of the old Dutchess Insurance Company by the new Dutchess Fire Insurance Company, on a basis of 25 per cent.

Third Deputy Attorney General Fisher tried to get Mr. Fowler to acknowledge that he was opposed to the resolution as at first recorded, because it would call for the payment of \$63,000, which would impair the credit of the old company. Mr. Fowler admitted that this was one reason, but added that no action on reinsurance was taken up to February of this year.

At a special meeting of the board of directors of the Dutchess Fire Insurance Company J. J. Graham was relieved of his duties as secretary of the company and Frank L. Gardner was appointed to fill the vacancy.

INDUSTRIALISM IN GERMANY.

(Continued from Page 7.)

ages of 60 and 70—sixteen out of every 100 insured. Over 70 years the percentage drops perceptibly, owing to the class of work such persons perform.

Another fact of interest is the frequency of accidents on certain days of the week. Assuming that, on the average, 1 accident occurs every three hours during the year, the figures for industry would be 2.37 from 9 a. m. to 12 noon, and 2.11 from 3 to 6 p. m., but on Monday morning they are 2.87 and on Saturday afternoon 2.74. Hence it has been established that the great-

est number of accidents occur on Monday and Saturday, but especially on Monday.

Invalid and Old-Age Pensions.

The most extensive of the insurance laws is the invalid and old-age pension. There are thirty-one offices for managing this department, employing 3,800 clerks. In 1907 14,300,000 persons were protected by the invalid and old-age pension, the increase since 1900 being about 10 per cent. In 1907 \$41,174,000 was paid as pensions, benefits, etc., as compared with \$63,379,400 for sickness and \$35,771,400 for accidents. Since 1900 the indemnities have almost doubled. The premiums of the workmen amounted to about \$19,516,000, or somewhat more than one-half of the indemnities. The general administration cost about \$2,380,000, or approximately \$1.67 per insured person. The fund increased from \$201,110,000 in 1900 to \$334,152,000 in 1909, which is about \$23.80 per capita insured. This great sum of money is placed out, principally in loans to villages and private persons, in supporting the credit of agricultural districts, and in erecting good, sanitary workmen's dwellings, bath houses, sanitariums, and similar institutions. The mean rate of interest on the money so invested has varied since 1900 from 3.53 to 3.55 per cent. At the beginning of 1909 the statistics showed that 868,086 invalid, 108,637 old-age, and 19,087 sick pensions would have to be paid during the current year. This is about the same number as is provided for by the accident insurance.

Since 1907 the number of invalid pensions has risen from about 305,000 to 868,086, but owing to the efficacy of this department of insurance the strain on the old-age pension fund has gradually diminished, the number of old-age pensions having decreased from 203,955 in 1896 to 108,637 in 1909. The same effect is to be noted in the sick pensions, the number of applicants having begun to drop in 1907. Furthermore, the amount of the pensions has steadily increased—about 17 per cent. in seven years. There is still, however, considerable difference between pensions in the agricultural and in the industrial districts, since the population of the latter is among the better paid classes of workmen, insuring the higher pensions by higher premiums. Thus the average invalid pension in East Prussia in 1907 amounted to \$33.90; in Berlin, \$42.24, and in the industrial district of Bechum, \$51.49.

The causes of invalidity have proved to be chiefly enervation, anemia, senil-

ity (men 15 per cent. and women 22.1 per cent.), diseases of the lungs other than consumption (men 16.7 per cent. and women 8.9 per cent.), consumption (men 15 per cent. and women 9.5 per cent.), rheumatism, gout, diseases of the limbs and nervous troubles (men 15 per cent. and women 18.6 per cent.). Up to the age of 35 more than half the recipients of invalid pensions in industrial occupations suffer from tuberculosis of the lungs; in the younger classes almost two-thirds. The sick insurance office is making great endeavors to stamp out this plague by special treatment, by the isolation of incurables as in the consumptive stations at Berlin and other points.

HEALTH INSURANCE.

The Provident Savings Life's health bureau reports as follows:

"Of those who applied during the first eight months for the health bureau examination, 62 per cent. were found in good health, and 38 per cent. were found with various forms of impairment; some of them not immediately dangerous, but all of them important, because they would have led to serious consequences if not discovered and checked in time.

"The large proportion of impairments reported was to an extent due to the fact that many of those who applied realized that they were ailing and wanted to know the truth. But the important fact disclosed by these examinations, and the one that fully justifies this plan of assisting in the conservation of the health of policyholders, was that 40 per cent. of those found impaired were unaware of any trouble.

"The knowledge gained by these medical examinations has enabled many of these people to avoid needless suffering and premature death. We simply informed them of their physical condition and the law of self-preservation, the desire to live, did the rest."

CHIEF CROKER GETS HIS OWN WAY.

The Municipal Civil Service Commission has at last decided in what way it will go about the revision of the mental tests for applicants for places as firemen and policemen, advocated some time ago by the Mayor, at about the same time that Chief Croker declared that more attention was being paid in the examination to "brain rather than brawn."

The entire list of mental questions will be revised by the commission with a particular view to the reduction

of the restrictions which have heretofore shut out many applicants for appointment from outside the city. One of the first requirements which will be taken up is that of "localities," which embodies many questions which only a man most familiar with the city could answer offhand.

OBITUARY.

Gustavus C. Holt.

On Monday afternoon last there was carried to his eternal rest from his late residence, 918 Beacon street, Boston, one of the most lovable of men—Gustavus C. Holt, senior partner of John C. Paige & Co. He had passed away early in the morning of last Friday at his summer home in Hingham, after an illness of a little over a month. Mr. Holt was born in Boston in 1851, and in his early manhood became associated with the fire agency of Kinsley & Hastings, which later became Kinsley & Holt. In 1873 the late John C. Paige started the splendid agency, which still bears his name, and Mr. Holt was then his first and only assistant. With the growth of the business he became chief clerk, and, following the demise of Mr. Paige in 1897, he became senior member of the firm. Mr. Holt was a man of quiet manner and large ability. He was uncommonly fine looking, and had but recently appeared to be in such blooming health that the announcement of his death came as a severe shock to most of his friends. He is survived by a widow, two daughters and two sons. At a special meeting of the Boston Board of Fire Underwriters, held last Friday, Messrs. Blake, Rothery, Wheelock and O'Brien paid feeling tribute to the departed. Messrs. Blake, Lovett, Serrat, C. H. Porter and Gierasch were appointed a committee to frame a memorial to Mr. Holt, and Messrs. Bullard, Rothery, O'Brien, Crain and Reed were delegated to attend the funeral. The offices in the insurance district were closed from 2 to 3 of that day in respect to the dead.

Albert Henry Ward.

Albert Henry Ward, manager of the London Assurance Company for South Africa, died on July 20 at Johannesburg. Mr. Ward, who was in his thirty-fifth year, had spent the whole of his business career in the service of the Northern, first in the London office, then as inspector for South Africa, and finally as its manager in Cape Town, a position to which he was appointed in 1907.

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the CONNECTICUT MUTUAL.

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

Bardoe's Column.

LESTER C. LOCKWOOD and Arthur H. Lockwood, of Lockwood Bros., have formed a partnership with W. B. Ward, of Ward & Crawford, the new firm to be known as Lockwood Bros. & Ward. The new firm will have the general and local agency for the German Fire of Pittsburg and the Ben Franklin Fire of Pittsburg. The general agency will be located at 100 William street, and the local office at 80 William street.

Manager Charles H. Post, of the Caledonian Insurance Company, has returned from Europe.

George E. Kline, vice-president of the Continental, went to Chicago last week, it being his first visit since he came East to take up his new duties. From Chicago he went to Great Falls, Mont., where he was married last night to Miss Frances Cooper.

John Kenlon, deputy chief of the New York Fire Department, has been acting in Chief Croker's place at fire headquarters since Friday. When Croker went off for a holiday he recommended Kenlon, and Commissioner Waldo approved the selection.

The General Fire Assurance Company has been admitted to Pennsylvania.

Owing to the absence of Mr. Bissell the executive committee of the Fire Underwriters Association has not had a meeting to consider the effect of Henry Evans' refusal to join the movement, nor is it likely that a gathering will take place until Mr. Bissell returns. The prevailing opinion is

that if the new organization is to be a success its regulation as to commissions will have to be altered to permit the payment of contingents, many strong companies, both domestic and foreign, now inclining to that method of compensating agents.

Chicago set a new record for fires in July, with a total of 1,512 alarms. This breaks all records in the Fire Department since its organization. Hot winds and the long spell of warm weather were partly responsible. The total loss, however, was comparatively small. The largest previous record in the history of the department was 1,218 alarms turned in during a month of the railroad strike in 1893.

A special meeting of the stockholders of the Continental Fire Insurance Company will be held on August 22 for the purpose of considering the question of altering and amending its charter upon reincorporation under the insurance law of the State of New York and the adoption of a new charter, broadened to take all the privileges at present allowed by the insurance law.

The New York Fire Patrol now possesses a new automobile patrol wagon, a cut of which appears on the cover of this issue of THE CHRONICLE. The automobile patrol has been reviewed by underwriters in Pine, Cedar and William streets, and is now stationed at 310 West One Hundred and Twenty-first street.

The Swiss Reinsurance Company contemplates entering the United States with an arrangement to do business only under the wing of the Phoenix Assurance Company of London.

NOTEWORTHY ADVANCE.

The
BERKSHIRE LIFE
Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.

Large surrender values.

Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in installments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.
Curtate Summations of D Column.
Immediate Temporary Annuities.

Uses.

- Computing Annual Term Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
- Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
For these purposes the "select and ultimate" will be most useful.
- Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
- Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
- Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.
- Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
- Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
- Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
- Warranted Commissions for New Business.
Surrender Values.
Dividends.

DEATH KNEEL FOR NEW YORK FIRE HORSES.

Waldo Decides to Put Department on Automobile Basis—Fire Hose Auto Costs \$50 a Year; Horse Drawn, It Would Be \$1,200.

FIRE COMMISSIONER WALDO of this city has decided to substitute motors for horse-drawn fire-fighting equipment. The 45-horse-power automobile hose cart of High Pressure Company 72, at 22 East Twelfth street, has demonstrated, after a year's trial, that it can cover more ground in less time and carry twice as much hose at much less expense than when horses are used.

Next week the Fire Department will advertise for bids on nine pieces of auto apparatus, which it is planned will replace engines, hose carts and trucks now drawn by horses. Six of

the new vehicles will be hose autos. There will be one couple gear hook and ladder auto truck, one gasoline driven and gasoline pumping engine, and one gasoline driven "steamer."

Figures prepared by Commissioner Waldo show that it costs twenty-four times as much to maintain a team of fire horses as it does one auto hose cart. The cost of maintenance last year of the gasoline driven hose cart, including expense of repairs, gasoline and oil, was only \$50, while to stable, feed and shoe a team of horses cost, approximately, \$1,200.

Compression is maintained in the cylinders day and night, and the

chauffeur fireman may start simply by throwing on the clutch. The vehicle carries from eight to ten men and 2,000 feet of three-inch hose, or twice as much as the ordinary horse-drawn cart. In addition, it is equipped with a tower nozzle near the front, through which a stream may be thrown direct.

The picture on the front cover of this issue of THE CHRONICLE shows the hose auto responding to an alarm. The crew is commanded by Fire Captain Edward F. O'Connor, and Fireman James Tierney is in the chauffeur's seat. The car makes thirty miles an hour in the street.

Mutual Reserve's Remaining Assets.

THE receivers of the Mutual Reserve Life Insurance Company and Edward S. Rapallo, the special master appointed to pass on claims against the concern, made their reports at a hearing before Judge Ward in the United States Circuit Court last Friday. Many creditors represented by lawyers were on hand to urge their exceptions to the allowances and the disallowances recommended by the receivers.

The assets of the company, as far as disclosed, were sufficient to allow the payment of only fifty or sixty cents on the dollar on death claims, with nothing left for living policyholders.

Among the principal exceptions filed to the reports were those on behalf of French and Spanish policyholders, whose death claims had been disallowed by the special master on the ground that there were sufficient as-

sets in those countries in the hands of the liquidators to satisfy such claims.

The French policyholders put in claims of approximately \$150,000 for death benefits. All these claimants, as well as those in Spain, were represented by Royall Victor, of the firm of Sullivan & Cromwell, who urged the payment of the foreign creditors under the rights guaranteed by the treaties between those countries and America, which gave their citizens the same standing in the United States courts as American citizens.

Mr. Victor said that there were on deposit \$41,000 free assets in French banks belonging to the company and \$131,000 on deposit with the Government there as a guarantee fund under the provisions of the French law. If the total of \$172,000 could be employed to pay death benefits, he said, all the French claims would be satis-

fied. But the expert testimony was that the Government deposit under the French law could be employed for but one purpose—to pay the mathematical reserve of each policyholder—and could not be used to pay death benefits.

The court asked Mr. Victor whether he meant to say that death claimants were not protected under the French law by virtue of that deposit.

Mr. Victor replied, "Yes."

"That seems monstrous," declared Judge Ward.

The lawyer added that the foreign policyholders would get only about twenty cents on the dollar if they were not permitted to share in the distribution of the assets here.

The hearing on the exceptions of other groups of creditors promises to be long drawn out, and the matter may be taken to the United States Court of Appeals.

Seen and Heard in La Salle Street.

CHICAGO, Aug. 10.—The Chicago local entertainment committee, which has in charge preparations for the meeting of the National Association of Local Fire Insurance Agents in the city next month, has not yet fully matured its plans. They will depend to some extent on the report of the finance committee which has not yet completed its labors.

The entertainment committee, however, has decided that it will not undertake a great deal in the way of automobile rides and the like. These forms of entertainment provided by convention cities in the past have been enjoyed and appreciated. The committee believes, however, that in the case of Chicago a change is desirable, as the circumstances are different. Probably 75 per cent. or more of the men who attend the Chicago convention will have business to transact with Western department offices, or at least will want to call upon some of the managers of their companies. The entertainment committee believes that in looking after the comfort of the visitors and providing enough entertainment to show that Chicago insurance men are glad to have them as guests and then leaving them to enjoy themselves as they see fit will be more acceptable than a constant round of entertainments occupying most of the time not taken up in convention work.

The program for the meeting includes such questions for discussion as "Fire Insurance Expenses," "State Rating Laws," "Uniform Blanks," "Trust Lines and Brokers," "Qualifications for Agency Appointments." Those selected to speak on these questions are largely local agents, although several insurance commissioners have been invited to participate, among them Superintendent Hotchkiss of New York, Charles W. Barnes of Kansas and James V. Barry of Michigan.

The Chicago committee having charge has selected President Homer W. Stillwell of the Chicago Association of Commerce to deliver the address of welcome. The response will be given by F. G. Lumpkin, Columbus, Ga., vice-president of the National Association.

The executive committee of the National Association of Local Fire Insurance Agents has voted to admit to the "co-operating list" the Massachusetts Fire and Marine Insurance Company of Boston and the Scranton Fire

Insurance Company of Scranton, Pa., these companies having subscribed to the territorial and expiration principles of the National Association.

Accounts current are now being received at Chicago from agents in Illinois on July business. As the commission scale of the Western Insurance Bureau became effective in the State July 1, these accounts current are being watched with more than usual interest. In a few cases agents have held out commissions according to their old contracts. In these cases the companies, if they live up to their obligations, will have to make the agents make necessary corrections or take up their supplies. More or less argument and correspondence is expected, but after this month agents are expected to know that the companies are in earnest when they say that the bureau scale is a maximum.

Just as some agents have been accustomed to try to make field men think they received excess commissions from every company in their agencies, so it appears now that a few are going to give out the impression that not all members of the Western Insurance Bureau are living up to their pledges. One case is reported by a non-bureau field man where an agent told him he had the promise from certain of his companies of a premium at the end of the year equal to the difference in his commissions on the old and new scales. The field man who tells this is entitled to belief. Whether the agent who told him is also truthful is another question. If he is, it looks as if crooked work was beginning early in the game.

Announcement that James V. Barry, insurance commissioner of Michigan, will deliver the annual address at the October meeting of the Fire Underwriters Association of the Northwest, is a splendid start on the program. No commissioner in the country stands higher in the esteem of fire insurance men. Mr. Barry's reputation as one who says things worth hearing is equalled only by his reputation for saying them in an entertaining manner. There is not an insurance man in the entire West who will be listened to with greater interest than he.

The committee on revision of the ritual appointed at the last meeting

of the grand nest of the Blue Goose has addressed a circular letter to the various ponds asking for suggestions as to desirable changes. It is somewhat surprising that the old ritual has been in use for four years with but slight changes from the original draft, improvised in a few hours for an evening's fun. As the order has grown its serious side has been more emphasized and a number of State ponds have introduced innovations of their own to give utterance to this more serious spirit. It is not unlikely that the revision committee will take cognizance of this sentiment and add to the dignity of the ritual.

The Illinois Insurance Commission held an executive session in Chicago recently to consider its report. It is understood that O. B. Ryon, attorney of the commission, has been at work on the report for some time. The committee, of course, will give out nothing at present as to what its findings and recommendations are likely to be.

Reports from the "excepted cities" of the West, to visit each of which committees of managers have been appointed, give a faint idea of what problems are to be met in bringing about a reduction in expense. Chicago has many salaried managers, a number of general agents conducting local agencies, a horde of brokers and solicitors, high rates on preferred business, and agents doing a large downtown business have to render much service in the way of inspections, etc., which other agents do not have to render at all. Louisville, on the other hand, has mostly sole agencies, practically no brokers or solicitors, few salaried managers, and is regarded as comparatively easy to handle.

Milwaukee has high rates on pre-

ferred business, six home companies besides two "annexes," an army of solicitors. St. Louis, with low rates and persistent rate-cutting still shows a low loss ratio year after year. Commissions are perhaps more excessive there than in any other city in the West. The anti-compact law covers commissions as well as rates. The agents do not believe the companies will all play fair if an agreement could be reached. They think there should be a curtailment in the number of agents and other reforms before the commission question is taken up. Cleveland agents point to the duplication of work in the field and on losses, resulting in expense, which they think should be eliminated before an attempt is made to cut commissions. Cincinnati has the salaried manager and the solicitor to deal with among other problems.

It can readily be seen that with the varying conditions it would be almost impossible to formulate any general scheme to be universally applied. Each city will have to be dealt with individually and with infinite tact and patience. Agents at some points, at least will demand concessions from the companies in return for lower commissions, such as the reduction in the number of agents or reduction in rates.

Just now it is almost impossible to do anything, as the vacation season is at its height.

* * *

Several of the leading liability offices in Chicago are reporting a remarkable increase in volume of premiums this year. Apparently several causes are contributing to this result. In one case at least the increase is largely due to securing the liability lines on several very large contracts in the far Northwest. One office is receiving considerable increase through excess premiums, and there probably are others similarly affected. Following the depression of 1907 some

agencies allowed the assured to make low payroll estimates almost at once and they were soon receiving excess premiums on these low estimates. Others succeeded in holding up the estimates immediately following the panic with the result that they had rebates to pay the next year and had to accept low estimates. They are now in line for excess premiums and higher estimates. The growth of the automobile business has cut an important figure in the receipts of some of the offices.

EMPLOYERS LIABILITY HEARINGS IN ILLINOIS.

CHICAGO, Aug. 10.—The Employers Liability Commission of Illinois began holding hearings at various points in the State this week. The most important one will be held at Chicago on August 24 and 25. The commission has sent out to employers, labor organizations and other interested parties a synopsis of a tentative bill it has drawn, which will be the basis of the discussions at the hearings.

This proposed bill is a workmen's compensation measure. It provides for compensation on the following basis:

Death: Where there are dependents, three years' wages, but not more than \$1,500 or less than \$3,000; where there are no dependents, a sum not to exceed \$200.

Permanent disability: A pension on the basis of 50 per cent. of the employe's earnings, to be paid as long as disability lasts or until the compensation shall amount to four years' wages, such pension to begin after two weeks' disability. For permanent partial disability, the percentage of compensation is to be reduced in proportion to the reduction in earning capacity.

Temporary disability: When such disability has continued bona fide for two weeks the employe is to receive

50 per cent. of his earnings from the beginning of disability and as long as it lasts. Provision is made for determining disability.

Minors: To be compensated for permanent disability on the basis of 50 per cent. of the wages of adults in the same line of employment; for temporary disability, where there are dependents, on the basis of 50 per cent. of adults' earnings, provided the compensation shall not exceed the employe's full weekly pay; where there are no dependents, on the basis of 50 per cent. of the employe's own wages.

The proposed law leaves the employe the privilege of suing the employer under common law or statutes, in case the employe does not take compensation, but in that case the employer has all his old defenses. If the employer refuses to compensate the injured employe and forces him to sue, the employer is then deprived of his privilege of pleading the fellow servant rule, assumption of risk or contributory negligence, unless the employe's negligence be greater than that of the employer, in which case damages shall be apportioned according to relative negligence and the burden of proof shall rest upon the employer.

The proposed law is to apply to all employers of labor who have more than five persons employed at one time.

PACIFIC COAST CASUALTY.

S. H. Wolfe, the adjuster, has finished his examination of the Pacific Coast Casualty Company, and in his report increases the assets from those claimed by the company, namely, \$970,146.56 to \$972,387.27. Mr. Wolfe concludes his report as follows: "The policyholders of this company are amply secured by a capital stock of \$400,000 and an admitted surplus of \$276,753.73. Claims appear to have been settled promptly."

H. A. WILEY ROYAL SPECIAL.

Announcement was made Tuesday last that Herbert A. Wiley has been appointed special agent for New England of the Royal of Liverpool. Mr. Wiley, though still a young man in the thirties, has already seen seven years of service in the office of the Scottish Union and National at Hartford, and thereafter two years with the National Fire in that city. He then became special agent of the Royal Exchange, holding that position for two years, and the past five years has been special agent for New England of the Insurance Company of the County of Philadelphia.

**BANKERS LIFE COMBINES
HEALTH AND LIFE.**

The Bankers Life Insurance Company of the City of New York announce that their new policies are now ready for issuance. These forms are written combining health insurance with life insurance and are unique in that they represent the first policies of their kind to be issued by any New York State life insurance company.

Vice-President Wilbur S. Tupper devised the combination of health and life insurance ten years ago on the Pacific Coast, and achieved considerable success with the Conservative Life of Los Angeles, utilizing and specializing on these forms.

The policies are written on the basis of five dollars of health insurance, which covers all forms of disability for each thousand dollars of life insurance. With each thousand dollars of endowment insurance ten dollars per week of health insurance may be had. The health portions of these contracts are absolutely without restriction and present a new phase in the disability insurance business.

THE RAWN CASE.

In an effort to prove that Ira G. Rawn, president of the Chicago, Indianapolis and Louisville Railway, was murdered, and did not come to his death by a pistol shot fired by himself, a reward of \$5,000 has been offered by the Rawn estate for information leading to the arrest and conviction of the supposed murderer or murderers. Mr. Rawn was found dead in his home at Winnetka on the morning of July 20.

HERE AND THERE.

The Dutchess Fire Insurance Company of Poughkeepsie has declared a semi-annual dividend of 2 per cent.

Albert H. Mowbray, fellow (by examination) of the Actuarial Society of America, formerly actuary of the Insurance Department of North Carolina, and later with the California Insurance Department, announces the opening of an office as consulting actuary at San Francisco.

A large sprinklered risk recently burned at Nashville, Tenn., has caused a total loss to companies and the failure of the equipment is being investigated.

The Prussian National will plant the Prussian National Underwriters, which it recently started, in all available territory. Rosc & Mayer have

been appointed agents for the Prussian National Underwriters at New Orleans, the parent company being represented by the Adolphe D'Aquin Company.

George H. Henshaw has resigned as special agent for the Atlas of Des Moines in South Dakota to take Iowa and Nebraska for the National Union.

Frank M. Avery, manager of the California department of the Fire Association of Philadelphia and the Philadelphia Underwriters, is here from San Francisco.

Mayor Gaynor and the City.

IN the attack upon William J. Gaynor, Mayor of New York, on the deck of the steamship Kaiser Wilhelm der Grosse in her slip at Hoboken when he was about to sail on a short European vacation, every lover of good government received a blow. Fire underwriters in their representative business capacity were affected, as well as their individual character as citizens.

* * *

Henry W. Eaton, United States manager of the Liverpool and London and Globe Insurance Company, in response to a request from THE CHRONICLE, had this to say:

"The event regarding which you ask me to briefly comment is most startling, and, in its effect, disheartening to all concerned in good government. Whilst all true citizens will greatly hope that Mayor Gaynor's life may be preserved, and that we may enjoy the continued benefits of his wise and just administration, arrested only by temporary inability, we are yet im-

pressed with the painful idea that in this free land a gentleman honored by the gift of such an office, and fearless in his work, has been struck down by the hand of a disgruntled, and, as it would appear, an incompetent city employe. There would be some relief in discovering, as may possibly prove to be the case, that such a lawless act was prompted by a mind so afflicted as to be irresponsible."

* * *

The "New York Times," in its leading editorial of yesterday morning, said:

"We wish it were possible for Mayor Gaynor in the slow hours of suffering and peril through which he is passing to know how the hearts of his fellow-citizens go out to him in sympathy and affection, and with what fervor they hope that he may be restored to complete the service for which he has shown himself so rarely fitted. Most of us, we venture to say, hardly knew what a place he had secured in our esteem and regard until this terrible experience brought it clearly to us. And there is a sense of

sorrowful pride in learning that in this supreme trial he has manifested the simple manliness, the native fortitude, the calm dignity that we naturally associate with his personality."

IN THE OLDEN TIME.

Epictetus was born at Hierapolis in Phrygia and became a slave of Epaphroditus, a favorite of Nero, who is recorded to have treated him with great cruelty. One day Epaphroditus began twisting his leg for amusement. Epictetus said:

"If you go on, you will break my leg."

Epaphroditus persisted, the leg was broken and Epictetus, with unruffled serenity, only said:

"Did I not tell you that you would break my leg?"

LLOYDS AT BASKING RIDGE.

BASKING RIDGE, N. J., Aug. 10.—The firemen of this place have insured with the Lloyds of London. They pay \$100 for insurance on \$900 that it will not rain between 1 a. m. on August 19 and midnight of August 20.

Half Million Dollar Fire in Boston.

BOSTON, Aug. 10.—(Special.)—A destructive fire swept the lumber district along Albany street last night, causing losses estimated to aggregate \$500,000, mostly on lumber, as the buildings, with one exception—the fire department repair shop—were of small value. The entire department was called out, and the metropolitan system of mutual aid, whereby most of the surrounding

towns sent fire fighting aid, was availed of for the first time.

The principal loss was suffered by the Blacker & Shepard Company, and may reach \$200,000. The insurance loss involved is thought not to exceed \$350,000 in all, the fire department building not being insured. The insurance loss is well distributed among the companies represented in Boston.

Among the property destroyed in the fire department building were engine 9, truck 14 and chemical 5. While

the lumber district fire was in progress another occurred in the building of the Johns-Manville Company on High street, destroying values of perhaps \$50,000.

The great number of pieces of apparatus in action last night and the caution which the companies exercise in writing lumber risks, caused a waggish agent to remark that "the fire department had more lines on the property affected than did the insurance companies."

AN INSURANCE MILLION IN SOPHOMORIC HANDS.

It is quite the ordinary thing for bands of beauties from Kentucky, Kansas and Georgia to visit Wall street in the good old summertime. It is not always usual for the afore-said bands of beauties to find themselves rivalled by foreign students of the masculine persuasion.

A collection of sophomores' from the College of Commerce in Cologne is on this side of the water at present, with the settled purpose of learning American business ways. This week this sophomore collection took a dive into the most gilded ripple of New York's financial pool. In other words, they visited the Stock Exchange. But they did not go back to the Plaza without showing that they heard of the existence of other ripples in this pool. One of the other ripples, into which they dived, is devoted to life insurance.

In the vaults of the New York Life building they formed in line and were permitted to hold as much wealth as can be contained in a small bag. When they were told that the \$1,000,000 which made a very small parcel was equal to 4,000,000 marks, it was necessary to lead the way upstairs at once where refreshment could be administered. To see one insurance company wasn't enough, for they wanted to know all about these companies, so they went to Newark to look at the Prudential building, inside and out, and to meet Senator Dryden.

THE AMPERSAND CASES.

Subsequent to the decision by the Court of Appeals in the action of the Ampersand Hotel Company against the Home Insurance Company, wherein it was held that the alleged defense of conspiracy to burn the property in question was insufficient in law and in consequence that the action of the trial justice in striking

out that defence was affirmed, as was also the judgment in favor of the hotel company on all of the other defenses set up by the defendant, a motion to amend its answer by setting up further details of the alleged conspiracy claimed by the defendant's counsel to constitute overt acts was made on behalf of one of the other defendant companies before Justice Van Kirk sitting in the Supreme Court at Schenectady on July 15. The motion was argued on behalf of the defendant by Hartwell Cabell, of counsel for all the companies interested in the Ampersand Hotel Company loss. The motion was opposed by William B. Ellison and Arnold L. Davis of counsel for the hotel company.

Justice Van Kirk has just handed down a decision in which the motion to amend is denied on the ground that the Court of Appeals has in effect decided that the matters alleged in the proposed amendment would not constitute a defense.

A NEW SKYSCRAPER BY FIRE UNDERWRITERS.

A local real estate transaction of some importance to fire underwriters was the sale of the property at 21 to 27 Cedar street by the City Investing Company last week. Reports, which obtained neither confirmation nor denial, were published to the effect that the property had been purchased by a fire insurance syndicate. Since then the property has been transferred to the City Real Estate Company, a holding company. It has been learned upon good authority that the latter concern is acting for the parties mentioned in the report.

Henry Evans, president of the Continental Insurance Company, heads the syndicate, which has in view the improvement of the property, which fronts a little more than 90 feet on Maiden Lane and Cedar street, with a building probably twenty stories in

height, for occupancy by fire insurance companies. This additional evidence of the concentration of the insurance business to the east and north of the financial district is especially interesting in view of the several recent improvements made in the vicinity of the purchase, and behind the move is the Fire Companies Building Corporation, recently incorporated at Albany with \$1,500,000 capital—a combination sufficiently influential to induce others to build near by.

OBITUARY.

James L. Foley.

Major James L. Foley, Cincinnati manager for the Royal, died last Friday night, after a short illness. He was manager for the company at St. Louis for some years, being transferred to Cincinnati about five years ago. He was a veteran of the Civil War and about seventy years of age. While at St. Louis he served in several important civic positions, and was a member of the commission which is just finishing the installation of a \$10,000,000 waterworks system at Cincinnati, representing the insurance interests on the commission. He was a past commander of the Loyal Legion at Cincinnati.

Walter Nichols.

Walter Nichols died at his home, 401 Sackett street, Brooklyn, in his ninety-third year. He came from Newport, R. I., in 1851, settling in Brooklyn, and entered the insurance business as a clerk in the office of the Nassau Fire Insurance Company. He helped in the organization of the Mechanics Fire Insurance Company of Brooklyn and became its secretary in 1859, retaining that position until the company was liquidated in 1887. He then continued in the insurance business as a broker. Mr. Nichols left a family of four sons and three daughters.

Home Office Reinsurance.

IT has been decided by the Massachusetts Supreme Court that a fire insurance company may not charge home office reinsurance against gross premiums. The decision was rendered in the case of the Federal Insurance Company against Gilmour & Coolidge, its former agent, in favor of the latter. Justice Rugg, who wrote the opinion, says:

"This is a suit in equity for an accounting between a fire insurance company and its agents. The material facts are that the defendants were constituted the agents of the plaintiff by a contract dated September 3, 1903, which set out the terms under which the business was to be done. It contained no express provision as to termination, and both parties assumed that the relation would be of long duration. On February 15, 1907, the plaintiff telegraphed the defendants in substance that it had reinsured its fire risks and discontinued that branch of its business. The controversy arises as to the contingent commission, which may be due under this clause of the agency contract, to wit:

"In addition to the above rates of commission, a contingent commission of 10 per cent. will be allowed you, predicated on the yearly profits of the agency, computed in the following form—the first computation to be as of September 1, 1904, i. e.—

"The first year you will be credited with the gross amount of premiums written, less cancellations, reinsurances and returns of every nature on the one hand, and debited with commissions, postage and other incidental agency charges, local board and fire patrol assessments, local taxes, if any, losses incurred during the year and 40 per cent. reserve on the net premiums written during the current year, and upon the profit balance, if any, thus shown the contingent com-

mission will be predicated. The same methods of computation will apply the second year, and thereafter, with the exception that beginning with the second year the reserve that has been debited the previous year will be brought down as a credit, and you in like manner debited with a 40 per cent. reserve on the premiums of the current year.'

"It is to be observed that this language does not specifically refer to the contingency which has arisen. It must be assumed, however, that an ending at some time of the relationship created by the contract was impliedly contemplated. It would inevitably occur by the efflux of time through the death of one or both of the defendants. The language of the clause is general. Its purpose is to make a part of the compensation of the defendants commensurate with the energy, industry and perseverance with which they should prosecute their work as agents. This purpose is applicable to the relation of the parties, whenever the agency may cease. The words 'predicated on the yearly profits,' do not indicate an intention that no such profits should be ascertained in the event of a termination of the agency between the annual dates fixed in the contract, but rather describe a term of calculation which is to be used year by year, so long as the contract is in force, and for any fraction of a year remaining unadjusted when the relation of principal and agent ceases. See *Doc v. Grafton*, 18 Q. B. 496-501. The date was apparently adopted for convenience, and was not coterminous with the calendar year of the agency. Hence the terms of payment established by the contract are to be applied to the situation of the parties as it is found to be on February 15, 1907, and their rights and

liabilities are to be determined as of that date.

"The plaintiff urges that the word 'reinsurances' in the contract means that in making up the items of the account upon which the contingent commission is to be computed, the actual cost to it of reinsuring its risks should be charged against the gross premiums. Evidence was received to show that the word 'reinsurances' as used in dealings between fire insurance companies and their agents has a technical meaning of agency reinsurance and excludes home office reinsurance. If there was any doubt about the sense, this evidence was competent. *Jennings v. Puffer*, 203 Mass. 534, 89 N. E. 1036; *Way v. Greer*, 196 Mass. 237, 81 N. E. 1002; *Smith v. Vose Piano Co.*, 194 Mass. 193, 80 N. E. 527, 9 L. R. A. (N. S.) 966, 120 Am. St. Rep. 539. Its significance had been so confined in all the previous accountings between the parties. Although risks written by the defendants had occasionally been reinsured through the plaintiff's home office, this expense had never been charged against the profits of the defendants' agency. Its context in the contract indicates that the word was intended to be confined to reinsurances effected at the agency of the defendants, and did not include a total reinsurance of all risks by the home office, made without the knowledge or consent of the defendants. The contract must be the only guide for ascertaining the rights of the parties. We cannot speculate as to what they might have agreed had the contingency which has now come to pass been before them when its terms were settled, nor undertake to make what may now seem an equitable adjustment of their conflicting claims. The rule which the parties have themselves

CHICAGO'S GREATEST COMPANY

ILLINOIS LIFE INSURANCE CO.

OLDEST IN CHICAGO **CHICAGO** LARGEST IN ILLINOIS
JAMES W. STEVENS, PRESIDENT

We Guarantee where others Promise

The year 1909 was the most successful in this company's already splendid record of successful years.

INSURANCE IN FORCE
FIFTY MILLION DOLLARS

adopted must be used to measure their obligations. According to that rule the contingent commission is to be computed, whenever the occasion arises for ascertaining it, by putting upon the credit side of the account the gross amount of premiums received for the period under consideration (less cancellations, agency reinsurances and other returns), and the 40 per cent. reserve which had been used as a debit item at the last previous accounting, and charging against it on the debit side, expenses, losses and a 40 per cent. reserve on the net premiums of the period under consideration. Upon whatever balance of profit is thus shown the contingent commission is to be computed. The master has found that the word 'reserve,' employed to describe the item of 40 per cent. on the net premiums in making up the account, although used in the insurance business to designate a fund set aside for reinsurance of outstanding risks, if necessary, is not limited to this meaning but includes also funds to pay losses or other expenses of the business. In whichever sense it may have been used in this contract, the result is the same. Forty per cent. on the net premiums of any period appears to have been adopted by the parties as an approximation of the actual cost to the plaintiff of carrying the insurance written by the defendants for that period. It was credited to them when a new account was made up because the real losses for the period just ended on risks previously written had been then ascertained. While not an exactly accurate means of ascertaining the net profit of the business of the agency, it is one which can be applied at any time without waiting for the policies to expire in order to determine the net profit with accuracy. But whether accurate or not, it is the rule made by the parties, and it is not unconscionable. There is no occasion for the court to try to take better care

of the rights of the parties than they have provided by their written agreement.

"On the report of the master under this rule the balance due the plaintiff is \$219.48. Let a decree be entered according.

'So ordered.'"

AUTO RISK PREMIUMS.

In accordance with the recent decision of the Court of Appeals in the case of the New York Board of Fire Underwriters against Higgins & Cox et al., that, under the provisions of the act incorporating the board, underwriters and agents issuing automobile and marine policies insuring property in the Borough of Manhattan and the Bronx in the City of New York against fire (among other risks), are required to make a return to the board showing the aggregate amount of such part of premiums received on these policies as represents the insurance against fire, the companies have been requested by a circular from the board to promptly file answers to the following questions with the treasurer of the board, covering the six months ended June 30, 1910:

1. Have you issued any automobile policies?
2. Are the premiums on these policies representing insurance against fire included in your returns filed with the treasurer for the period?
3. Have you issued any marine policies?
4. Are the premiums on these policies representing insurance against fire included in your returns filed with the treasurer for the period?

INSURANCE COMPANIES SUE IN LOUISIANA.

One hundred and thirty-four insurance companies of States, other than Louisiana, have filed a petition in the Civil District Court at New Orleans, asking that the tax collector for the

Parish of Orleans be enjoined from collecting taxes assessed against insurance premiums due the companies. They allege that the policies issued in New Orleans and in Louisiana were issued by brokers domiciled there, who defray the expenses of their offices, and that they have no capital invested in that State, and that the premiums due are not the result of capital invested there.

They deny the right of the Louisiana Legislature to localize such premiums away from the domicile of the petitioners, the State power of taxation, they declare, being limited to persons, property, or business within the State and declare that the laying and assessment of such a tax is a violation of the fourth amendment of the Constitution of the United States, which forbids the taking of property without due process of law.

EXPLANATORY.

From the Hoboken Insurance Gazette.

The Gazette recently came into possession of a highly scandalous bit of information in regard to the conduct of one of our largest local sources of corporate pride. We accordingly put in type some three columns of matter for next week's installment of what we expected would be an expose of high finance on our side of the river.

J. Stuyvesant O'Brien just this moment came into our office, paid up his subscription bill for the last three months, and promised us the annual statement of his company next January. He is one of the first citizens of Hoboken, and any intimation that his conduct of affairs, committed to his trust, is open to suspicion, is entirely unwarranted.

We have decided not to publish any expose of any company having anything to do with Hoboken. We don't believe there is anything scandalous in Hoboken.

A GREAT SIX MONTHS

We closed the first half of 1910 with a rousing increase in new business over our record for the first half of highly prosperous 1909.

In policies and dividends we have what the public wants. In literature and canvassing aids we have what the agent wants. And back of all is a reputation gained from 59 years of activity as a Massachusetts Company.

If you are a genuine producer, a *delivering* producer, and wish to join our forces, address

GEORGE D. LANG,
Superintendent of Agencies
Massachusetts Mutual Life Insurance Company,
Springfield, Mass.

Incorporated 1851

In New England.

BOSTON, Aug. 10.—By far the most compact, logical and well-constructed review of the attempts to introduce governmental regulation of life insurance companies in the United States, and the possibility of such a change being brought about, has been contributed to the Boston "Globe" by Samuel Davis, a member of the Massachusetts bar, and one who has been well and honorably known in the domain of insurance journalism. Well may the Federal regulationists rejoice and Max Cohen chortle, for Mr. Davis has brought such balm to their souls as they have not experienced for many a long year. His article, while not chary in conceding what is due to State supervision, embodies the opinion that well-known evils, inconveniences, inconsistencies and disadvantages are connected therewith, which would be put aside by a system of Federal regulation. Having reviewed Paul versus Virginia, Hooper versus California and other decisions whereby insurance was excluded from the interpretation of commerce under the terms of article I, section 8, of the Constitution, which says, "Congress shall have power to regulate commerce with foreign nations, and among the several States, and with the Indian tribes," Mr. Davis comes to the conclusion that the question itself is an economic one, and that the arguments of the opponents of Federal regulation are based upon an altogether narrow and formal conception of the letter of the Constitution. In support of this he quotes Dean Bigelow of the Boston University Law School, as follows: "Congress has power under the Constitution to regulate commerce between the States. Commerce was no doubt an unfortunate word to use, but what the framers of the Consti-

tution were aiming at is made plain enough in their debate and in the notorious facts of the times, if not in the final language of the Constitution itself. They were endeavoring to break down the barriers to freedom of intercourse between the States—business intercourse, especially, of all kinds. They, however, without due caution used the word commerce instead of business or some such term, and the Supreme Court of the United States looking at the letter alone, could accordingly say, and did say, that insurance was not commerce, and hence that the States were not prohibited from discriminating against each other in regard to that important subject. And so the business of insurance was put in fetters not intended." In a final word Mr. Davis says, "There is on the one side a conception of the meaning of the word 'commerce' strongly held to by the United States Supreme Court, while on the other hand it is the irresistible pressure of economic evolution. It is my opinion that economic force will win in the end. Of necessity it will win as the result of an amendment to the Federal Constitution which shall in express terms give Congress jurisdiction of insurance."

The foregoing is a necessarily imperfect abridgment of an uncommonly fine presentation of the matter under review, and those interested in the subject will do well to study the article itself in its entirety. It occupies a part of a special section of Monday morning's "Globe," which contains besides more or less of the usual grade of matter generally put forth to catch the elusive insurance advertisement.

Tribute to the Late G. C. Holt.

At last Tuesday's meeting of the Boston Board of Fire Underwriters,

a committee, of which E. D. Blake was chairman, submitted a memorial to the late Gustavus C. Holt, which was unanimously adopted. It recounts the main facts of the life of the deceased, as summarized in our issue of last week, and says of him: "During all his years in active business he was a most respected member of our fraternity. * * * A loyal friend, an upright man, he has passed to the Great Beyond, and we pay a deserved tribute to the memory of our late associate, who lived a life full of honor and has left behind him a record of faithfulness to family and business associates. We cherish his memory as one who was ever faithful in all walks of life, and who leaves to us an example of sincerity, truthfulness and honor."

Star Producers.

The "Intelligencer," published by the Metropolitan Life, in its issue of July 30, under the heading "A Down East Banner Report," presents the following tribute to its Boston staff: "During the first twenty-seven weeks of 1910 (down to Saturday, July 9) the Boston staff made 107 per cent. of Superintendent Seldon D. Bartlett's apportionment of industrial business increase, and 217 per cent. of the superintendent's apportionment of paid-for ordinary business. That is to say, the staff not only kept in advance of the superintendent's industrial apportionment for the period referred to, but exceeded by 24 per cent. his ordinary apportionment for the entire year."

A Well Deserved Promotion.

In view of the forthcoming change, whereby Mr. Fletcher, Deputy Insurance Commissioner of Massachusetts, will connect himself with the Massachusetts Bonding and Insurance Company, Lemuel G. Hodgkins is to be advanced to the deputy commissionership. Mr. Hodgkins was educated at Worcester and Dartmouth College.

Good Salesmen Make Money

**Address Agency Department,
THE EMPIRE STATE SURETY CO.,
84 William Street, New York**

He entered the service of the department twelve years ago, and two years later was given employment in its actuarial work. In 1907 he was promoted to be chief examiner, and his excellent work as such thoroughly justifies the latest advancement which has come to him. Thorough, courteous and painstaking, Mr. Hodgkins has won the esteem of all who have had the good fortune to avail themselves of his services, and the deputy commissionership will be in most excellent hands.

As chief examiner, to succeed Mr. Hodgkins, Harry W. Peabody has been chosen, a gentleman who has been engaged by the department in a variety of important work since 1905, and who has acquitted himself well in the tasks imposed upon him.

New England Brevities.

F. G. Macomber has been appointed Boston agent at Lloyds, London, succeeding the late Francis Peabody.

Frank K. Mitchell has relinquished connection with the New England Bureau of United Inspection, and has accepted a position with the engineering department of the Continental.

That the new policy of the New York Life, which waives payment of premiums after the first, following total disablement of the assured, involves disability insurance, has been ruled by the attorney general of Massachusetts, who therefore holds that it cannot be lawfully issued in that Commonwealth.

Regarding the question, raised by the insurance commissioner, whether under the Massachusetts law, two or more surety companies may jointly and severally issue the same bond or obligation, the attorney general expresses the opinion that the language of the statute is sufficiently broad to include a contract of indemnity as

surety, whether such contract be in the form of an official bond or of any other kind of bond, and that in the case of fidelity or surety insurance no sufficient reason is presented why the construction of such statute should be narrow so as to permit more than one surety company upon the bond.

The building numbered 93 Water street, Boston, has been leased by John C. Paige & Co., and is to be remodeled for their use, communication between their present and additional quarters in prospect being easily established.

J. S. Galvin, of Decatur, for many years a valuable and faithful representative of the John Hancock, has resigned his position as State agent for Southern Illinois on account of ill health, and T. W. Boruff, for several years associated with Mr. Galvin, is appointed to succeed him in that capacity.

EMIL SCHWAB.

WANT REPEAL IN TEXAS.

The Chamber of Commerce of Dallas, Texas, has indorsed the action of Governor Campbell, who has called for the repeal of the new State fire insurance law. Copies of the resolution adopted were telegraphed to Governor Campbell and to members of each house of the Texas Legislature. The resolution follows:

Whereas, The governor has called a special session of the legislature and requested the repeal of the present law establishing the Fire Insurance Rating Board, and,

Whereas, We believe that the law should be repealed;

Resolved, That the directors of the Dallas Chamber of Commerce, in regular session assembled, do hereby unanimously indorse the action of the governor of the State of Texas in calling for the repeal of this law; and be it further

Resolved, That in our opinion the State is not ready at this time for further legislation in fire insurance matters, if the present law is repealed.

FRATERNALS IN MINNESOTA.

John A. Hartigan, Commissioner of the Minnesota Insurance Department, issues, under date of August 1, the following reports as to fraternal in that State:

An examination of the Grand Lodge Ancient Order of United Workmen, of Minnesota, shows the following condition, June 30, 1910.

Total income, December 1, 1909, to June 30, 1910.....	\$298,601.97
Total disbursements, Dec. 1, 1909, to June 30, 1910.....	241,837.10
Death claims paid.....	220,636.77
Total admitted assets.....	229,381.09
Total liabilities	34,098.58

The books and records were found in excellent condition and the ratio of expenses to income is low, as it should be in all fraternal societies.

An examination of the Bohemian Slavonian Workmen Benevolent Society of St. Paul, shows the following condition on July 19, 1910:

Admitted assets.....	\$36,058.64
Liabilities	4,747.26

Expenses for 1909 were 8 per cent. of the total income. The records are carefully kept.

An examination of the Katolicky Delnik (Catholic Workman) of New Prague, Minn., shows a total income in 1909 of.....\$48,675.06
Disbursements

37,089.16
Total admitted assets (Dec., 1909)

89,138.66
Total liabilities

3,000.00

During 1909, the expenses were 12 per cent. of the receipts. The assets were well invested and the society is honestly managed.

Governor Hadley of Missouri, after a recent address by John Mitchell, former president of the United Mine Workers, declared that he would use his influence with the next session of the Missouri Legislature to obtain advanced legislation in the matter of workmen's compensation.

Bob's Remarks.

THE fire patrol figures of the companies for the boroughs of Manhattan and Bronx, which have been published in advance by the "Journal of Commerce," have caused some surprise and no little comment. In view of the fact that local offices have been complaining about dullness of trade—both as to renewals and new business—it appeared strange to some observant brokers and underwriters that so many companies and agency offices showed increases and some of them very substantial ones.

In connection with this a William street broker, who is somewhat of a wag in his way, after looking over the list, gave utterance to the following trite but scriptural expression: "So the last shall be first and the first last." A glance at the published patrol figures will make obvious the meaning of his remark.

The proposed Fire Underwriters Association does not seem to be moving with that ball-bearing smoothness that was expected. One of the chief elements of hostility is that of the Brokers' Board, which, by the way, has had, recently, many new members added to its list. It is a plain fact that this organization of brokers, long dormant and now getting new life by reason of new accessions to its membership and the proposed curtailment of brokerage, is an important factor to be considered in the regulation and adjustment of commissions as to the metropolitan district. There is another "insurgent" element in the field, such as some fifty odd companies which have not signed the agreement.

Fred. H. Parson, well known as a veteran broker, has withdrawn completely from the insurance field. His

business will be taken care of by his long-time assistants, J. C. Ammermuller and John Schmall.

"Looks like the two extremes of the fire insurance district," remarked the other day an astute and observant placer for a prominent brokerage concern. This after the news came out of the real estate deal in Cedar street and Maiden Lane. His opinion was that William and Fulton streets and William street and Maiden Lane would now (or very soon) be respectively the northern and southern boundaries of the fire insurance section. It certainly looks that way, although the "English channel" still exists in Pine street.

Under the firm name of J. R. McCay & Co. Mr. McCay has become associated in partnership with a gentleman in Germany for general insurance business, including "treaty" contracts.

The completion of the union of the big retail drug concerns of William B. Riker & Son Co. and Hegeman & Co. into one corporation, to be called the Riker-Hegeman Company, has set the street agog as to the probable insurance brokerage control for the successor organization. Johnson & Higgins have for some time placed the insurance on the Riker properties, and R. C. Rathbone, Son & Co. that of the Hegeman Company. John H. Flagler, R. Blecker Rathbone and Frederick H. Pouch are mentioned as probable officials in the new company, and the opinion prevails that, for such reason, the Rathbone firm will handle the entire combined insurance.

Application clerks call attention to the fact that we have a Yorkville in

Upper Manhattan, a Brownsville in Brooklyn and now another is added, "Lunchville." This is the district on Maiden Lane from Gold street to Nassau street. The wonderful growth of the restaurant business in this section during the past few years has been so evident that the "street" has dubbed it "Lunchville."

Brokers who handle insurance on automobiles report an unusual dullness in business—even for this season of the year.

Kelly & Fuller have added to their metropolitan agency the Michigan Millers Mutual Fire Insurance Company.

NEW LIABILITY RATES.

The committee on rates of the liability insurance companies is passing on the forms of endorsements to be attached to existing policies, to take care of the compensation feature.

The companies have the liability question in hand, and while meetings will be held from time to time, they will be principally for the purpose of straightening out questions that are likely to arise. The matter of rate has been settled. It is said that two of the companies expect to have their rate books out this week.

WHITE HOUSE HISTORY.

"The Presidents from 1789 to 1910, and a History of the White House," is the title of a book just issued by the New York Life Insurance Company. It contains a set of portraits and a short biographical sketch of each of the Presidents from Washington to Taft, inclusive. It also contains pictures of the White House in 1800 and 1908, together with a selection from "One Hundred Years in the White House," by Rene Bache.

AGENTS WANTED FOR UNOCCUPIED TERRITORY

INSURANCE FUNDS ARE BUILDING UP NEW YORK.

In the column headed "Holland's Letter," the "Wall Street Journal" points out that much of the building expansion, characteristic of New York, lately, is due to the loans made by the savings banks and the large insurance companies. "Holland" says:

"The habit of saving has become so thoroughly established in this State that it is now possible to report that the wage-earners have deposited in the aggregate so much money that the resources of these institutions are almost exactly \$1,700,000,000. That is capital equivalent, practically, to the total investment in electric plants, manufactories and operations throughout the United States, Great Britain and the continent of Europe, according to statistics recently prepared for George Westinghouse.

"With this money and with the loans, made by the great insurance companies, much of the constructive changes in the way of building operations, which have been so strikingly characteristic of New York City within the past ten years, have been made possible. It is not unreasonable to say that the savings of those whose incomes are relatively small have gone far to make possible the real estate improvements in New York City, improvements which are yearly swelling the taxable values of the city by millions of dollars."

SAFEGUARDING COTTON IN SOUTHERN TERMINALS.

A committee of Southern underwriters went to Savannah last week and conferred with C. G. Bell, president of the local cotton exchange, and several railroad traffic officials in regard to bettering conditions for protecting cotton at the terminals.

The underwriters demand especially that better water facilities be provided

at the terminals and that a larger number of watchmen be maintained. It is also suggested that a more general segregation of the cotton shipments is desirable and that the terminals be divided into zones, so that a possible fire in one section of the warehouses may be checked before it can spread to adjoining zones. It is understood that the congestion is one of the most serious objections which the underwriters advance against present conditions.

INSURANCE COMPANIES AND COTTON CHARGES.

A Southern view of one phase of the cotton insurance problem is presented in the following editorial of the "Insurance Vindicator" of New Orleans:

"Realizing that the charges for handling cotton at New Orleans have operated to the detriment of this port, the Cotton Exchange has been endeavoring to obtain a reduction from all concerned in the business. The announcement has been made that all interests have agreed to lower their rates but the insurance companies, and publications in the daily press leave the companies in the attitude of being the only stumbling block to placing this port in a position to regain some of the business it has lost through expensive handling. It is claimed that there has been great improvement in the matter of protection in the presses, and for this reason there should be a marked reduction in rates. It is because of this improvement in conditions for the prevention of fires that New Orleans is now enjoying lower rates than any other cotton handling point in the South. Elsewhere the basis rate is one dollar and twenty-five cents; in New Orleans it is 1 per cent. At other points one thousand is the maximum number of bales allowed to be stored, but here, owing to these improvements, there

may be stored 2,500 bales. The open presses—that is, those which have no doors—pay \$1.50, but if they had, or should comply with the offer of the insurance companies and install doors, their rate would be materially reduced. However, the companies have offered to make a still further reduction if the presses will introduce the hydrant and modern systems of fire prevention. They refuse to do this; hence the companies take the position that the present rate is as low as it can be made for safety and profit in the operation of their business.

"Then, again, the cotton people regard the insurance rates as applicable to their presses only, but the companies include the cotton as well in the calculation of the proper charges to be made.

"The companies do not and have no desire to take a position inimical to the welfare of New Orleans, but they are in a different attitude from most of the other interests involved. They insure cotton in every port in the South where it is handled. A reduction without proper reason in New Orleans would mean a demand upon them for lower rates from each of these points. These ports would ask why the companies should assist New Orleans to the detriment of competing places. For these reasons the companies have been compelled to decline a further reduction in rates here except in the manner suggested—upon the introduction of proper equipments for fire prevention."

CASUALTY AND SURETY MEET.

The seventh annual meeting of the Board of Casualty and Surety Underwriters will be held at the Hotel Plaza in this city on Tuesday, October 18. The meeting will be followed by a dinner on the evening of the same day.

Text of Insurance Amendments.

THE text of the amendments to chapter 697 of the laws of New York, made at the last session of the legislature, follow:

Section 1. Section seventy-three of chapter thirty-three of the laws of nineteen hundred and nine, entitled "An act in relation to insurance corporations, constituting chapter twenty-eight of the consolidated laws," is hereby amended to read as follows:

Sec. 73. **Special deposits to secure registered policies and annuity bonds.** Any domestic life insurance corporation may deposit with the superintendent of insurance securities of the kinds and in addition to the amount now required and authorized by law to be deposited with him, to any amount not less than twenty-five thousand dollars, which shall be legally transferred by it to the superintendent for the common benefit of all the holders of its registered policies and annuity bonds issued under the provisions of this article, and he shall hold the same in trust for the purposes and objects specified in this article; provided that no policies shall be registered or annuity bonds issued under the provisions of this section after the thirty-first day of December, nineteen hundred and ten. Such securities shall not be alienated from the purposes of such trust, nor transferred except in the manner provided in this article, and such transfer must be made by the superintendent under his seal of office upon the written application, un-

der its corporate seal, of the corporation making the deposit, or of the receiver of such corporation, and in compliance with the laws of the State relating to such transfers. When such securities shall have been legally transferred to the superintendent, he shall issue to such corporation registered policies of insurance or annuity bonds of such denominations or amounts as the corporation may require. Such policies or bonds shall bear upon the face thereof the words "the reserve on this policy (or bond) is secured by pledge of public stock or bonds and securities" with the seal of the department, and shall be countersigned by the superintendent or his authorized deputy. The corporation shall be charged by the superintendent upon the delivery of such policies or bonds with the amounts of the net value thereof at the end of the policy year, valued according to the provisions of section eighty-four of this chapter, making proper allowances for semi-annual, quarterly or monthly premiums, but in no case shall the amount of securities deposited under the provisions of this section be less than the amount of such aggregate values.

Sec. 2. Section ninety-six of said chapter is hereby amended to read as follows:

Sec. 96. **Limitation of new business.** No domestic life insurance corporation shall issue in any year new policies for a larger amount in the aggre-

gate than as follows, to wit: If the total amount of insurance by said corporation in force on the thirty-first day of December of the preceding year is more than fifty million dollars, and not in excess of one hundred million dollars, not more than thirty per centum thereof; if more than one hundred million dollars, and not in excess of three hundred million dollars, not more than twenty-five per centum thereof, or thirty million dollars, whichever is the larger; if more than three hundred million dollars, and not in excess of six hundred million dollars, not more than twenty per centum thereof, or seventy-five million dollars, whichever is the larger; if more than six hundred million dollars, not more than one hundred and fifty million dollars, or it may increase its new business over the largest amount issued in any one of the three years immediately preceding in the proportion in respect to said amount which the difference between twenty-five per centum of its net renewal premiums computed according to the bases of mortality and interest assumed in calculating its liabilities, and its total expenses for such preceding year, after deducting from said total expenses, (1) the items of first year expenditure specified in the first sentence of section ninety-seven of this chapter, (2) its actual investment expenses (not exceeding one-fourth of one per centum of the mean invested assets) and (3) taxes on real estate and other out-

New York, N. Y.

lays exclusively in connection with real estate, bears to said net renewal premiums; provided, that in determining the amount of insurance in force and the amount of new insurance issued, industrial policies issued upon the weekly premium plan and all premiums on such policies and the expenses in connection with such policies, shall be excluded and there shall be included only that insurance upon which the first premium or instalment thereof has actually been received. A foreign life insurance corporation, which shall not conduct its business within the limitation and in accordance with the requirements imposed by this section upon domestic corporations, shall not be permitted to do business within this State.

Sec. 3. Section ninety-seven of said chapter is hereby amended to read as follows:

Sec. 97. **Limitation of expenses.** No domestic life insurance corporation shall in any calendar year, after the year nineteen hundred and six, expend or become liable for, including any and all amounts which any person, firm or corporation is permitted to expend on its behalf or under any agreement with it (1) for commissions on first year's premiums, (2) for compensation, not paid by commission, for services in obtaining new insurance exclusive of salaries paid in good

faith for agency supervision either at the home office or at branch offices, (3) for medical examinations and inspections of proposed risks, and (4) for advances to agents, a total amount exceeding in the aggregate (a) the loadings upon the premiums for the first year of insurance received in said calendar year, (calculated on the basis of the American experience table of mortality with interest at the rate of three and one-half per centum per annum) and (b) the present values of the assumed mortality gains for the first five years of insurance on policies in force at the end of said calendar year on which the first premium, or instalment thereof, has been received during said calendar year, as ascertained by the select and ultimate method of valuation as provided in section eighty-four of this chapter; and (c) on policies issued and terminated in said calendar year the full gross premiums received, less the net cost of the insurance for the time the insurance was in force, computed by the American experience select and ultimate table, three and one-half per centum. No such corporation shall make or incur any expense or permit any expense to be made or incurred upon its behalf or under any agreement with it, except actual investment expenses (not exceeding one-fourth of one per centum of the mean invested assets) and also except taxes on real estate and other outlays exclusively in connection with real estate, in excess of the aggregate amount of the actual loadings upon premiums received in said year calculated according to the standards adopted by the company under section eighty-four of this chapter, and the present values of the assumed mortality gains hereinbefore mentioned. No such corporation, nor any person, firm or corporation on its behalf or under any agreement with it shall pay or allow to any agent, broker or other person, firm or corporation for procuring an application for life insurance, for collecting any premium thereon or for any other service performed in connection therewith any compensation other than that which has been determined in advance. All bonuses, prizes and rewards, and all increased or additional commissions or compensation of any sort based upon the volume of any new or renewed business or the aggregate of policies written or paid for, are prohibited. No such corporation shall pay commissions upon renewal premiums received upon policies issued after the year nineteen hundred and six, in excess of five per centum of the premium annually for fourteen years after the first year of

insurance in the case of endowment policies providing for less than twenty annual premiums, nor in excess of seven and one-half per centum of the premium annually for the first nine years after the first year of insurance and five per centum of the premium annually for the next ensuing five years in the case of other forms of policies; provided that an amount found to be equivalent to the aggregate amount so payable by a calculation approved by the superintendent of insurance and based upon mortality, interest and lapse rates, may be distributed through three or more years, or through a period exceeding fourteen years, but not more than two-fifths of such amount shall be payable for any one year; provided further that in any agency district subject to the supervision of a local salaried representative the renewal commission payable to agents of such district shall not exceed two-thirds of the foregoing rates annually for fourteen years, subject to the calculation as aforesaid; provided further that any such corporation may condition the allowance or payment in whole or in part of any of the renewal commissions allowed to be paid as aforesaid upon the efficiency of service of the agent receiving the same or upon the amount and quality of the business renewed under

NYLIC ONCE AGAIN.

Thomas A. Buckner, vice-president of the New York Life, in that company's bulletin of Tuesday, announces the continuance of Nylie as follows:

"In a recent bulletin we informed the field of our indebtedness to the Hon. William H. Hotchkiss, Superintendent of Insurance, and his staff of lieutenants, for their able efforts in securing the amendment to section 96 of the laws of the State of New York. It is our pleasure to again advise the field force that, largely through the aid and assistance of Mr. Hotchkiss and his principal lieutenants, Messrs. Paterson, Hadley, Hurrell and Woodward, section 97 of the New York laws has been amended so as to permit the reintroduction of Nylie for agents. Mr. Hotchkiss and each of the foregoing members of his staff have gone carefully through the operations of Nylie time and again. Long ago they all became convinced that Nylie was an excellent program for the company.

"Chief Examiner Hadley, upon his investigation and examination into the affairs of the New York Life as far back as 1907, expressly commended the Nylie system and referred in terms of praise to the great advantages accruing to the company through this method of compensating its agents. As a result of Mr. Hadley's report, which included a careful study of the progress of the business of the New York Life and the economy of its management, Superintendent Hotchkiss became convinced that the law should be amended so that Nylie could be offered to men who had not secured membership in Nylie prior to the passage of the Armstrong laws.

"Frequent conferences between the superintendent and his various lieutenants on the one side, and the officers of the New York Life, especially General Counsel McIntosh and Actuary Hunter, on the other, resulted in the drafting of an amendment to section 97 which would permit the company to resume Nylie. This amendment recently passed the Legislature and was signed by the governor, as every one knows."

AN AUSTRALIAN MERGER.

Henry D. Baker, United States vice-consul general at Sydney, announces in a communication to the State Department the amalgamation of the Mutual Life and Citizens Company and the Australian Widows' Fund. He says:

"The directors of the Australian Widows' Fund propose to go into voluntary liquidation to enable them to sell their business and undertaking to the Mutual Life and Citizens. The liquidator has power to transfer the business on the following terms: The Mutual Life and Citizens undertakes to manage the business at 10 per cent. of the premium income and to allow the Widows' Fund to share in all profits from new business. Any profit must be restricted to the difference between the actual cost to it and the 10 per cent. allowed by the agreement, and that profit, and more along with it, will no doubt be put into the purchase of extra new business. The agreement also provides for the election by the Widows' Fund policyholders of a body of trustees to safeguard their interests. Provision is also made for auditors and actuaries."

SPECIAL OPPORTUNITIES offered now in Southern States to Representatives of

**CITIZENS
NATIONAL LIFE
INSURANCE
CO.**

W. H. GREGORY,
President.

**LEADING FIRE COMPANY
OF THE WORLD**

(of Liverpool,

England.)

Bardoe's Column.

THE fire engineers of the United States and Canada will meet this month in Syracuse as members of the International Association of Fire Engineers. They will discuss problems pertaining to the extinguishing of fires by public departments, the use of automobile apparatus, the necessity for quick and accurate notice of the location of fires in connection with rapid-moving apparatus, high pressure service, the value of cisterns as a water supply for fire engines, the benefit to fire departments resulting from the underwriters' inspections of cities, the purpose and object of underwriters' tests as conducted at Chicago, the use and abuse of automatic sprinkler protection as an auxiliary to public apparatus, etc.

President Hugo Schumann of the Germania Fire will arrive from Europe in a few days.

A delegation of German insurance men is visiting the head offices of American companies, and also some of the insurance departments.

The United States Underwriters has begun business. It is composed of the North River, Nassau, Empire City and United States Fire insurance companies, each taking separate insurance to the extent of one-fourth of the total amount of the policy, which will be written under a form approved by Superintendent Hotchkiss. Crum & Forster are the general agents.

H. C. Stockdell of Atlanta announces that owing to financial conditions existing at this time the books of subscription for the stock of the

Merchants and Manufacturers Insurance Company will not be opened for the present.

In 1909 the fire insurance companies in Canada received \$17,058,843 in premiums and suffered losses amounting to \$8,585,354, a gross profit of nearly 50 per cent. The amount at risk in 1909 was \$1,863,459,222, an increase of \$162,751,259 over 1908.

J. G. Hilliard sailed from Queens-town yesterday by the steamship Adriatic for New York.

The Attorney General and the Insurance Commissioner of Texas have authorized the Fidelity-Phenix Company to notify all its agents to begin business again in Texas.

The Retailers Fire Insurance Company of Oklahoma City has been chartered at Guthrie with \$250,000 capital and authority to write insurance against fire, hail, lightning or explosion by natural gas. Behind the company stands the State Retailers Association.

The Great Eastern Casualty Company has appointed George R. Nolan as outside man to develop business from brokers. Mr. Nolan was formerly with the Massachusetts Bonding and Insurance Company.

Frank H. Sykes, secretary of the literary department of the Fidelity Mutual Life Insurance Company of Philadelphia, was in town this week.

J. Lehrenkrauss' Sons have been appointed Brooklyn agents of the Ocean Accident and Guarantee for all lines.

PROOF OF PUBLIC CONFIDENCE

This company has more premium paying business in force in the United States than any other Company, and for each of the last 16 years has had more New Insurance accepted and issued in America than any other Company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburg, Baltimore, New Orleans and Buffalo.

 Curtate Summations of D Column.
 Immediate Temporary Annuities.

Uses.

Computing Annual Term Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.
 Computing Annual Endowment Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.
 For these purposes the "select and ultimate" will be most useful.
 Computing Annual Pure Endowment Premiums:
 Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
 By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
 Computing Annual Semi or Double Endowment Premiums:
 Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
 Computing Limited Premiums:
 Divide the proper single premiums by immediate temporary annuity.
 Computing Surrender Values:
 Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
 Extended Insurance with Fractional Paid-up Endowment:
 Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
 Computing Terminal Reserves:
 Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
 Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
 Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
 Warranted Commissions for New Business.
 Surrender Values.
 Dividends.

NEW YORK FIRE PATROL FIGURES INCREASE.

Volume of Premiums for First Six Months of 1910 Almost \$1,000,000 Ahead of Last Year—Boston Increases Also.

At the regular monthly meeting yesterday of the New York Board of Fire Underwriters, the report of the finance committee was presented, showing the volume of premiums written by companies and agencies during the six months ended June 30, on risks located in the Boroughs of Manhattan and Bronx. Herewith we append a comparative statement for the corresponding period of 1909:

First Half 1909.	
Local companies	\$3,356,865.16
Agency companies	4,197,518.33
Foreign companies	3,104,032.99
	\$10,658,416.48

First Half 1910.	
Local companies.....	\$3,512,281.02
Agency companies.....	4,764,592.35
Foreign companies.....	3,326,558.61
	\$11,603,431.98

In looking over an old patrol statement of premium reported to the New York Board of Fire Underwriters, under date of December 31, 1868, it is curious and interesting to note what changes have occurred. The statement referred to quotes a list of 157 companies. Of this number 91 were New York City and Brooklyn, 61 New York and other States, while only five were foreign, all of which were English companies.

Boston, Aug. 18.—The returns of the Boston Protective Department, made public last night, show fire receipts in this city during the first half of 1910 of \$904,910 on buildings and \$1,446,462 on contents, an aggregate of \$2,351,372, or \$45,311 more than for the corresponding period of 1909.

Thursday Morning Postscripts.

THE special legislative committee, appointed at the last session of the Legislature to investigate alleged corrupt practices, is formally installed in its quarters on the thirteenth floor of the Liberty Tower this morning. An executive session was held at the Murray Hill Hotel on Tuesday, and the first public hearing will be held August 30.

Jersey City was so hard hit by fire last night that she had to call on New York for help. Before the fire fighters of Manhattan and the men of the Jersey City department whipped the flames there was nothing left of a solid block of factory buildings but

sizzling ashes, and black holes in adjoining streets marked the ruin outside the wasted block. The block destroyed lay in the centre of Jersey City's industrial district. It was bounded by Washington, Morgan, Warren and Steuben streets, a square which lies at a considerable distance from the river front, but within easy distance of the Pennsylvania railroad station. Within the block were the cork manufacturing plant of the Truslow-Fullee Company, the Independent Baking Powder Company's factory, the Ames Rolling Mills, the Ames cooperage factory and a few small buildings connected with the big shops. Just outside of the block across

Morgan street was the big plant of the Regal Sack Company. The fire leaped from the block and burned it to the ground.

William Augustus Walker, who for forty years practiced law in this city, having offices in Wall street, died suddenly on Monday from apoplexy in his home in Nyack. Previous to his retirement from active business he was one of the foremost figures in the field of admiralty law. He was president of the New York Lloyds for marine underwriters, which he organized. He was also president and founder of the Average Adjusters' Association of New York.

Life Insurance Taxation.

AM. JOHNSON, president of the National Life Insurance Company of the United States of America, discusses the question of life insurance taxation in the policyholders' edition of the "National News," published by that company. He says in the main:

"You probably do not know that life insurance is the most heavily taxed institution in America to-day. Do you know that you pay your share of twelve million dollars, which, in round numbers, was the amount levied upon the insurance companies of the United States last year? This is almost entirely a tax for revenue only, and is in addition to the enormous amount of taxes paid upon real estate and other property.

"No one denies that the investment of the funds of the policyholders should be subject to the most careful supervision, and perhaps it is fair that the policyholders should pay for the same, but two million dollars would and does more than pay for it—the other ten million dollars is a tax for revenue only, this amount being used for the expenses of government other than the supervision of life insurance companies, a tax which is laid upon thrift, human misfortune, misery and sorrow; for every dollar of this is

taken from policyholders, which either diminishes the amount of their insurance or increases its cost. The man who pays a premium on a policy which will yield a death benefit to his loved ones has done a wholly unselfish act, for he knows that he cannot profit by it himself and he realizes he will never live to see his loved ones enjoy the provision he has made. Why should a man who has done an act so unselfish, so fine and so noble, be 'fined' (as he is by this unjust tax) for his unselfish love? He could not be if the tax were levied upon him direct, but when it is aimed at the insurance companies whom he has appointed to carry the risk for his loved ones, it passes without remark; but even though it is indirect you are paying your share of this ten million dollars.

"Now, we come to your part of the matter: When one knows of the above condition of affairs and the enormous tax upon life insurance companies, the question at once arises: What can we do to better these conditions? You can exert your influence upon the community as a whole, and particularly upon the man whom you send to the Legislature. Try to induce him to remedy this injustice; to cease placing upon the industry of life insurance a tax which is borne by no other institution of like kind and character in this country, for life insurance is itself a tax voluntarily assumed by the prudent and self-sacrificing for the benefit of others, and when legislators lay an additional burden upon this self-sacrifice and devotion, discouraging thrift in its most desirable form, it shows a most lamentable weakness in our system of taxation.

"Your policy is being taxed; the cost of your insurance is increased by this unjust legislation; and it is to your interest to do your utmost to change conditions."

THE OCEAN LOG BOOK.

"The Ocean Log Book," Vol. 1, No. 1, September, 1910, has appeared in the London and New York offices of its publisher, the Ocean Accident and Guarantee Corporation of London. The Log Book is serious in spots. For instance, on the front cover appears the legend, "Automobiles divide the people into two classes: The Quick and the Dead." On page four, this same book asserts: "A wise man said that the two things necessary

to make a marriage happy are: (1) That the man should be deaf; and, (2) that the woman should be blind." On page two appears an offer of \$25 in gold to be paid for the best humorous story or anecdote not exceeding 100 words in length submitted before September 30 1910. Address Ocean Log Book, 59 John street." In view of this announcement and the fact that the production containing it has been sent to the various insurance periodicals, no one will longer question the sense of humor resident in the literary factory of the Ocean.

President Edson S. Lott Discusses the New Liability Statutes of this State.

THE United States Casualty Company has issued two pamphlets, containing the text of the new employers' liability and workmen's compensation laws respectively, which will take effect in this State on September 1. With these pamphlets, the company paid THE CHRONICLE a compliment by sending out the article on "Employers' Liability Here and Abroad," by P. Tecumseh Sherman, former Commissioner of Labor of New York State, which was written for THE CHRONICLE and appeared in our issue of July 28. This article in the United States Casualty's reprint was headed "The Workmen's Side of the Question."

Edson S. Lott, president of the United States Casualty, discussed the effect of the new labor laws on the liability of employers at length in the "Journal of Commerce" as follows:

"These amendments to our labor laws are, in their entirety, the most advanced ever enacted in this country, although, except as respects the compensation payable, not as far-reaching as the labor laws of many foreign countries. I speak of the two so-called Wainwright-Phillips acts as a whole because these two laws are so interwoven that they should be studied together. One of these acts is generally known as an act amending the employers' liability law, with alternative compensation plan, and the other as the compulsory workmen's compensation law, relating to certain dangerous employments.

Great Change Beginning.

"This is the beginning of a great change, and it surely is but the beginning, unless the new doctrine is declared unconstitutional. In place of 'damages' to be fixed by a court and jury, and hinging on whether or not the negligence of the employer was responsible for the injury, beginning September 1 the employer engaged in certain 'especially dangerous' occupations must 'compensate' his injured workmen, no matter, one can almost say, who is at fault. The new law as it now stands reads:

"This article shall apply only to workmen engaged in manual or mechanical labor in the following employments, each of which is hereby determined to be especially dangerous, in which from the nature, conditions or means of the prosecution of the work therein, extraordinary risks to the life and limb of workmen en-

gaged therein are inherent, necessary or substantially unavoidable, and as to each of which employments it is deemed necessary to establish a new system of compensation for accidents to workmen."

"The especially dangerous employments are named in the law. This reference to 'especially dangerous' employments was for the purpose of avoiding 'class legislation'—therefore, unconstitutional legislation—in making a beginning of what the promoters of the law hope will soon be universal legislation in this country, it being their intent to have enacted into law the doctrine expressed by President Roosevelt when he said in a message to Congress:

"Exactly as the workingman is entitled to his wages, so he should be entitled to indemnity for the injuries sustained in the natural course of his labor."

and promulgated by Hon. P. Tecumseh Sherman, formerly Commissioner of Labor of the State of New York, in the following words:

"The economic principle underlying this liability is that industries should pay for lives and limbs destroyed just as they pay for coal consumed and machinery worn out. And it seems to be the unanimous opinion of those who have studied this subject broadly, having regard to the causes of accidents, the operation of law and the welfare of society, that the compensation principle is right in theory and beneficial in practice."

No Class Legislation.

"I have said that the promoters of this new principle, which has now found a place in our general labor laws, declared as 'especially dangerous' the employments to which the new doctrine shall apply, and that this was done to avoid having the law adjudged unconstitutional on the ground that it was class legislation, it being unconstitutional to enact a law which grants special favors, privileges or advantages to any man or any class of men; hence the courts would declare unconstitutional any law granting compensation to, let us say, carpenters for accidental bodily injuries sustained in the course of their employment and withholding by its provisions such compensation to, let us say, cabinet-makers. But that which sometimes appears at first to be class legislation, which seems to apply to a part of and not to all of the people, is not

always in the last analysis found to be class legislation. These new laws may stand the constitutional test. The commission appointed last year to inquire into the question of employers' liability said in its report to the Legislature that the Constitution of the State of New York granted the Legislature power to prescribe that employers shall conduct their business, use their machines and use their property in such ways as shall conduce to the safety of their employes and the prevention of both accident and disease, and that the Legislature has exercised that power, in part; and the report goes on to say:

"Since beginning its investigation this commission has come to the opinion that even with such protective requirements as the law has thrown about the workman in modern industries, there still exist, in certain trades, dangers inherent in the employment which are at present substantially unavoidable. We are of opinion that it is competent for the Legislature to take a further step and provide conditions for the carrying on of such dangerous industries—not at the moment conditions as to the method of carrying them on, but conditions providing that any man in the State who carries on such dangerous trades shall be liable to make compensation to the employes injured either by any fault of the employer, or by those unavoidable risks of the employment. The effect of such a statute would be to reverse the common law doctrine that the employe assumes the risk of his employment."

"The report argues that, while it is quite within the powers of the Legislature to prohibit the construction of tunnels or the use of compressed air

(Continued on Page 12.)

NEW LIABILITY RATES

The liability insurance companies have individually settled upon the course to be pursued as to the new rates, under conditions which will obtain when the new laws go into effect in this State on September 1. There will probably not be another general meeting of the companies for some time, but the standing conference committee has been continued in existence for the purpose of mutual sharing of the experience of the companies in the coming months.

IRA G. RAWN'S AFFAIRS.

CHICAGO, Aug. 17.—The Winnetka home of Robert C. Brinkley, son-in-law of Ira G. Rawn, president of the Monon Railway, who died of a bullet wound on July 20, was entered last Saturday night and drawers in desks, to which Mr. Rawn's private papers had been transferred, were ransacked. The intruder was frightened away by a private watchman. Police Magistrate C. F. Hatley declared that the entry was evidently not made by burglars, as valuable silver and jewelry were not disturbed. Mr. and Mrs. Brinkley are in Virginia. Mr. Rawn carried accident insurance, totaling \$110,000 and accumulations.

MEMPHIS, Tenn., Aug. 17.—The Chancery Court found last week that Ira G. Rawn, president of the Monon, and formerly vice-president of the Illinois Central, with six other former railroad officials, held stock in the Memphis Car Company.

The other former officials, who are held to have owned the same amount of stock as Rawn, 150 shares, are Frank B. Harriman, general manager; William Renshaw, superintendent of machinery; Joseph E. Buker, assistant superintendent of machinery; John M. Taylor, general storekeeper; H. McCourt, general superintendent of the Southern lines of the Illinois Central, and W. S. King, superintendent of the Yazoo and Mississippi Valley road and of the Memphis Terminals of the Illinois Central.

The decree recites that McCourt and King voluntarily returned to the company \$13,000 each, which is stated by the attorneys to be all they had left of the \$16,000 they received as dividends on their Memphis Car Company stock.

The decree was the result of a settlement between the Memphis Car Company, the only defendant, and the officials of the Illinois Central road.

All civil action by the Illinois Central against the Memphis Car Company is brought to an end by the settlement.

New York Paterson's Gamaliel.

ALL because fire underwriters have declared that the Paterson Fire Department was inadequate, Mayor McBride of that city sent to New York on Monday a fire captain, two lieutenants and three firemen, who will study the fire-fighting system of New York for one month, and then go home to teach their Paterson comrades.

Fire Commissioner Waldo assured Mayor McBride last week that he would be glad to put some of the Paterson men in the New York School of Instruction. For one month the six men from Paterson will spend their days from nine to five in the School of Instruction, and at night will be assigned to six downtown engine companies.

"While you are here, you will rank as firemen, and you must do your work as such and live up to the rules of our department," said the commissioner to them. "In the School of Instruction you will be placed with thirty brand-new firemen, and will take the usual course of training with them. It will include every means of fire-fighting and life-saving used by our force, and you will see the practical side of things at night."

William Leslie Dill, secretary to Mayor McBride, said yesterday that since the big fire of 1902 criticism had been heaped upon the Paterson Fire Department from all sides. The criticism came most severely, he said, from the fire insurance companies, who had threatened to raise the

rates. The six Paterson men and their assignments are:

Capt. Charles Nolan, to Engine Company No. 5, at 363 Broome street.

Lieut. Thomas Coyle, to Engine Company No. 33 (Chief Croker's), in Great Jones street.

Lieut. John Specht, to Hook and Ladder Company No. 20, at 157 Mercer street.

Fireman Stephen Walls, to Engine Company No. 17, at 99 Ludlow street.

Fireman James Sweeney, to Hook and Ladder Company No. 6, at 77 Canal street.

Fireman Frank Boyle, to Engine Company No. 20, in Lafayette street, which has searchlight and high-pressure equipment.

The Paterson Fire Department consists of 165 men, ten engine companies, three trucks and one chemical engine. Mr. Dill says that two gasoline-propelled engines have been ordered.

Bardoe's Column.

THEODORE ROOSEVELT has notified J. Huyler Ellison, chairman of the General Convention Committee of the Freeport Fire Department, that on Oct. 4 next, he would address the 400 delegates of the Southern New York Volunteer Firemen's Association, who will meet that day at Freeport in the Sigmond Opera House. The Freeport firemen have decided that, with the speech of the former president and the display of the silver hose cart of the Peekskill Volunteers the three-day program will be about all the occasion in their eyes seems to require.

The Supreme Lodge of the Knights of Pythias at Milwaukee has decided to re-rate the members of the fourth class which includes all those who did not transfer their insurance to the new fifth class based on adequate rates. An unusual proportion of old members is left in the old class.

Artemas Roberts, president of the Amicable Life Insurance Company of Waco, Texas, has signed a contract for the construction of a twenty-story, modern fireproof office building in Waco at a cost of \$530,000. The highest building in Waco to-day boasts of six stories.

"The Unique Manual" for 1910-1911, issued by Sampson Dawe of Boston, has been received. It comprises 893 pages, printed on tough thin paper and bound in limp leather in the form that

can be slipped into a rather large pocket. It contains facts and figures of the regular life insurance companies in an unusually useful and valuable arrangement.

George E. Kline, vice-president of the Continental Insurance Company, who was married in Montana two weeks ago, is making the trip from Chicago to New York by automobile, accompanied by Mrs. Kline.

Howard Abrahams, assistant secretary of the National Surety Company, has been appointed New York man-

ager of the fidelity and surety department of the Maryland Casualty Company and will assume his new position on September 1. Mr. Abrahams has been associated with Vice-President Danmunn as manager of the National Surety's contract bond department since January, 1909. He had previously been connected with the Illinois Surety Company.

The Surety and Casualty Underwriters' Company of Newark has been appointed general agents of the Empire State Surety Company for all lines in the State of New Jersey with common rights in Essex County with the company's present local agent there.

Lloyds in New York State.

PURSUANT to the provisions of the new law vesting the New York State Insurance Department with power over Lloyds insurance associations, twenty organizations of this character—which are practically partnerships made up of a large number of individuals and operating through an attorney-in-fact, who mutually agree to become responsible for the loss due to fire or other causes—have made applications for certificates of authority permitting them to do business in this State after January 1, 1911. Three other associations of a similar kind, but known as interinsurers, have also applied.

The State Insurance Department

has issued the following statement to the public:

"The following associations, which have been doing business in this State have not made application and after this year will not be authorized to do business in New York: International Fire Office of New York City, Fidelity Insurance Association, and Union Underwriters. Two other Lloyds associations, the Garfield Assurance Fire Lloyds and the New York and New England Underwriters at Lloyds, are now being liquidated by the Insurance Department.

"The new law not only requires Lloyds and interinsurers thus to make application for certificates of author-

ity, but compels them to file with such applications their financial statements as of June 30 last and agreements, executed by their underwriters or duly authorized attorneys in fact, specifying one or more residents of New York on whom proofs of loss and legal process can be served. The law further requires the Insurance Department to examine each of the associations which applies for a certificate, and such examinations have now begun. It further places certain restrictions on this class of business, and is expected to put an end to numerous losses due to irresponsible underwriters and illegal organizations of this character. The department will thus be able shortly after January 1 to furnish the insuring public with accurate information as to the solvency and methods of business of all Lloyds and interinsurers issuing policies in New York, and also to lay information before the criminal authorities against underwriters and attorneys in fact which have not been authorized to do business in accordance with the new law.

"The Lloyds thus to be authorized should not be confounded with alien Lloyds, such as that which does business under the name of Lloyds, London. Citizens of New York who accept policies of any of the syndicates of underwriters operating under this name do so at their peril in case of loss, such syndicates having no authority to do business in this State, and there being no persons resident in New York on whom proofs of loss or process can be served to the end that suits to collect may be brought in American courts. After January 1 all agents or other persons representing Lloyds, London, or any unauthorized Lloyds in this State, will, pursuant to the new Lloyds article of the insurance law, be liable to criminal prosecution.

"The following Lloyds, with their attorneys-in-fact, have made applica-

tion and filed statements of condition as of June 30 last:

Underwriters at American Lloyds, Underwriters at Great Western Lloyds, the National Underwriters of America, Underwriters at New York and Boston Lloyds, the Union Underwriters of New York, for each of which Hall & Trowbridge, 45 Cedar street, New York, are the attorneys-in-fact.

Manufacturers Lloyds and Merchants Fire Lloyds, for each of which Jameson & Frelinghuysen, 111 William street, New York, are attorneys-in-fact; Henry Griffen being associated with them in the Merchants Fire Lloyds.

New York Central Lloyds and Mercantile Lloyds of New York City, for each of which John W. Fitzgerald, Little Falls, N. Y., is attorney-in-fact.

American Exchange Underwriters of New York City, for which Weed & Kennedy, 123 William street, New York, are the attorneys-in-fact.

North American Inter-Insurers of the City of New York, for which Benedict & Benedict, 35 Nassau street, New York, are the attorneys-in-fact.

New York Commercial Underwriters, for which Henry Stewart & Son, 3 South William street, New York, are the attorneys-in-fact.

Lumber Underwriters, for which Eugene F. Perry, 66 Broadway, New York, is the attorney-in-fact.

Allied Underwriters at New York and Chicago Lloyds, for which E. A. G. Intemann, Jr., 51 Sixth avenue, New York, is the attorney-in-fact.

Underwriters at the Isthmus Lloyds of the City of New York, for which Thomas Tilleston, 2nd, 84 William street, New York, is the attorney-in-fact.

New York Fire Lloyds, for which Cortis & Patterson, 22 West Fourth street, New York, are the attorneys-in-fact.

Subscribers at United States Lloyds, for which A. Foster Higgins, 3 South William Street, New York, is the attorney-in-fact.

Assurance Lloyds of America, for which Frank M. Parker, 156 Broadway, New York, is the attorney-in-fact.

Lloyds, New York, for which R. F. Folsom, 1 Liberty street, New York, is the attorney-in-fact.

Underwriters at the New York Insurance Association, for which Daniel Woodcock & Co., 19 Liberty street,

New York, are the attorneys-in-fact.

"The following inter-insurers have made like applications and filed their statements:

Subscribers at Individual Underwriters and subscribers at New York Reciprocal Underwriters, for each of which John R. Waters, 90 West street, New York, is the attorney-in-fact.

The Indemnity Exchange, for which W. R. M. Williamson, 290 Broadway, New York, is attorney-in-fact.

"The legality of organization and the financial condition of each of the domestic Lloyds and interinsurers will be the controlling factors in determining whether, after examination by the department, the certificate of authority required by the new law and authorizing them to do business after January 1 next, will be granted. Meanwhile, each of these organizations, save several which are practically dormant, are operating under the law as it stood prior to the amendment, the latter, so far as the conduct of business is concerned, not going into effect until the beginning of next year."

LEADING FIRE COMPANY
OF THE WORLD

Western Sayings and Doings.

WITH the annual meeting of the Fire Underwriters Association of the Northwest less than two months away, speculation as to who will be the next president is now beginning to be indulged in. That is a regular summer pastime in Chicago. This is a year when by custom the president will be chosen from among the managers. The two men who so far have been mentioned most frequently in this connection are W. N. Johnson, general agent of the North America, and A. R. Monroe, assistant manager of the Queen. Mr. Johnson was considered two years ago, but at that time he was located at Erie. Since coming to Chicago his acquaintance among Western fire insurance men has extended rapidly and he has grown in popularity. Mr. Monroe, while not in the limelight as much as he would be if he were a manager, is well known and very much liked.

There is other available timber, however. W. R. Townley, general agent of the British America and Western, is probably as well known to members of the Northwest Association as any man in it. For seven years, like Matthew, he sat at the receipt of custom, gathering in the annual dues as treasurer of the organization. J. W. Robertson, manager of the Fire Association, was spoken of for the presidency two years ago, when he was assistant manager, and his rise to the managerial rank makes him more rather than less available.

Richard D. Harvey, of New York, assistant United States manager of the Royal Exchange, and James F. Joseph, vice-president of the Commonwealth of New York, would both be seriously considered if they had remained in Chicago. Mr. Harvey had a considerable following two years

ago, but then, as now, the fact of his living in the East was against him. There is a strong feeling that the president should be a Western man, living within easy distance of Chicago.

The retirement of N. B. Jones, of Detroit, as State agent of the Spring Garden in Michigan has received more than the usual amount of notice. The fact that the company has retired him on a pension has been the subject of much favorable comment, for his service with the Spring Garden had only been of four or five years' duration. For years Mr. Jones has been accorded the affectionate title of "the Grand Old Man of Michigan." A long and honorable career in the field, where he has been like a father to the younger men, has endeared him to them. Much of his service was with the American Fire of Philadelphia, and it was only when it and the Spring Garden came under the same management that he became associated with the latter company.

Considerable grumbling is heard among field men in some of the Western States at the constant assessments levied upon them by self-constituted committees for one occasion and another. It is a very common occurrence in some parts of the West for a few special agents to decide that a present ought to be purchased for this field man who is to be married or that one who is leaving the field, or a complimentary banquet should be tendered and a proper gift presented to this or that one. Accordingly it is decided to call upon each field man for a certain sum and it is very embarrassing for him to decline. Yet, if he happens to be one who covers several States, the calls come so fre-

quently as to be a serious drain on his income.

Another annoying feature of the situation is that those who raise the money are accountable to nobody. Those asked to contribute generally have no voice in deciding how much money shall be spent, but are merely requested to step up to the captain's office and settle. The custom has gone so far that some of the field men are on the brink of open rebellion. They intimate that they would view the question differently if the object and amount of these expenditures were decided upon by the contributors and an accounting made to them.

Pending the visits of the managerial committees to the six excepted cities of the West to confer with local agents on the reduction of expenses, discussion of the expense question goes on in a somewhat desultory way. Field men do not appear much concerned about the suggestion that their numbers be reduced. They have nothing to do with making rates, and as a rule their adjustment work is now confined mostly to losses in which their own companies alone are interested. They are well aware that most companies are not yet ready to agree upon joint inspections. Their underwriting policies are so different that each, as a rule, wants the opinion of its own representative upon large risks, unless they be those handled by the syndicates. Unless there should be a change in this regard, the companies cannot dispense with the services of their field men unless first they reduce the number of their local agents to be supervised. The tendency is rather to increase the number of local agents and this tendency appears likely to continue until commissions are reduced by agreement or

by statute to a point where many will be frozen out of the business.

One man in the managerial ranks has called attention to a point where he believes an expense could be legitimately cut off. That is in the matter of maps. He believes that the present price for maps and for corrections is exorbitant. As the companies are the main purchasers of maps they could, by standing together, demand a reduction to what they might consider a reasonable figure.

To the hard-working field man, leaving home every Monday for five or six days' sojourn at hotels good and otherwise, the life of the assistant manager, with a larger salary and all the joys of home life, looks mighty good. Rumor in Chicago has it, however, that "things are not what they seem" always. Several assistant managers in Chicago are understood not to be very happy in their positions. They have the title and the salary, but the "working conditions," as labor unions call them, are not satisfactory. As for authority or responsibility they are about equal to chief clerks or head daily report examiners. While in some offices the assistant manager has well defined and important duties, the proper performance of which causes him to be recognized as a big man in the business, in others the manager is it, with a large "I," while few people outside of the offices would know that there was an assistant manager but for the fact that his name is printed in the insurance directories.

The seriousness with which some company executives take themselves adds greatly to the gayety of nations. Recently Chicago was honored with the presence of one of these personages. As there were in town at the same time some fifteen or twenty thousand Knights Templar, some of whom are persons of real importance,

his coming did not receive the attention it might otherwise have done, but he knew he was there and that was probably sufficient. Men who find no difficulty in conferring with the really big men in the business almost any time, had to arrange for interviews with him at set hours a day or two ahead. Dignity at times seems to run inversely as the square of the premium income.

The decision of the Empire State Surety to cease writing all casualty lines except burglary insurance in Illinois has been the subject of considerable comment and there is a tendency in some quarters to ask for the real reason for the decision. There is no cause for belief that there was any dark, hidden reason. It was merely the cutting off of something which was not profitable nor likely to be so for a long time to come. The Empire State Surety does a good volume of surety business in Chicago and does it at a low expense ratio. Its volume of any one of the casualty lines was small, the expense of handling the business was large and on some lines the loss ratio was also.

As a rule most companies entering the Chicago field find the development of all casualty lines except liability slow. As the Empire State Surety does not make a practice of going after large liability risks and as the small business, such as landlords' public liability and physicians' and druggists' liability, of which the company has a good volume in the East, are not yet developed in the West, the company faced the alternative of keeping up an organization to handle a small business or change its underwriting policy and accept in Chicago large liability risks, on which few of the older and larger companies are making any profit.

Last week was an "off week" in all kinds of insurance in Chicago. The

triennial convale of the Knights Templar brought to the city not only thousands of knights, but more thousands of visitors who wanted to witness the great parade. As the procession passed up La Salle street for about four hours on Tuesday there naturally was little doing that day. On Wednesday the time of many managers and their subordinates and of many local agents was occupied with visiting agents and on Thursday there was more or less interruption. Combined with the vacation season, which leaves many offices short-handed, work piled up sufficient to last several days despite heroic efforts to clear it away.

THE PROTECTIVE FIRE NEARLY READY TO BEGIN.

Robert R. Tuttle, president of the Protective Holding Corporation, says:

"The Protection Holding Corporation, organizing the Protective Fire Insurance Company, has arrived at a point where the services of a promoter are no longer needed, and, therefore, has accepted the resignation of Ira A. Manning, whose connection with the corporation has entirely ceased. The Protective is distinctly different from most of the new companies formed in recent years, in that it has not made an active canvass among general agents, offering territory in return for subscriptions for its stock.

"The corporation has secured nearly one thousand stockholders who have bought and paid for in whole or in part, nearly \$300,000 of the stock, and reservations have been made for nearly \$400,000 additional stock. The indications are that the company will have a body of about ten thousand stockholders. The directors are well-known business and professional men, who are highly regarded in their respective communities. The officers of the company hope to start writing insurance within sixty or ninety days."

In New England.

BOSTON, Aug. 17.—No longer will the sunny presence of George P. Field illumine the gatherings of Boston fire underwriters. For some months past he had been in delicate health, but last Friday ventured upon an automobile trip from his summer home in Norwell, Mass., to his office in Boston, which overtaxed his strength and necessitated his removal to the Parker House, where he expired in the afternoon. Although not wholly unexpected, the demise of this lovable man came as a shock to the many that had the privilege of knowing him.

George Prentice Field, senior member of the firm of Field & Cowles, New England managers of the Royal and Boston representatives of several other leading companies for fire, marine and casualty business, was born in Seamount, Me., October 17, 1844. He was educated in the public and high schools of Belfast, whither his family had removed during his infancy. He next worked in his father's insurance agency as a clerk until the establishment, during the Civil War, of the provost's marshal's department for the Fifth Maine District, in which he was employed until after the close of the war. After that he served for a time in the Belfast custom house as deputy collector, resigning that position to become assistant secretary of the National Insurance Company of Bangor. In 1867 he connected himself as general agent with the First National Fire of Worcester, and later became its secretary. He was appointed special agent of the Royal in July, 1873, under Foster & Scull of Boston, at that time its New England representative. He wrought so well in this capacity that advancement to the position of general agent, superintendent of

agencies and membership in the firm came to him successively. The firm name after the death of Mr. Foster having changed to Scull & Bradley, on the demise of the latter, became Scull & Field, and when Gideon Scull was gathered to his fathers in 1900, E. B. Cowles was admitted and the present style established. Some time afterward Herbert Damon was taken into partnership, and last month George Neiley and John Jennings, as detailed in our issue of July 14.

Mr. Field's colleagues in the business were not slow to appreciate his good qualities and to confer upon him positions of honor and trust. He was president of the New England Insurance Exchange in 1885 and served for a period of five years (1888-1893) as chairman of the New England Bureau of United Inspection. During the same period he was president of the Boston Protective Department, which also had his services as a director from 1900 to 1906. During these same years he was president of the Insurance Library Association, and was elected president of the Boston Board of Fire Underwriters in 1905, holding that position for three years.

At a special meeting of the Boston Board, held last Saturday, a committee comprising Augustus Lovett, Thomas L. O'Brien, Frederic Hinckley, Francis Stevens and Herbert J. Coolidge was appointed to prepare a suitable memorial to the dead.

The funeral took place Monday afternoon at 2:30, from the residence of Mr. Field's son-in-law, Horace B. Pearson, at 36 Monmouth street, Brookline. The attendance was large and the floral tributes lavish and exquisite. Among those noticed were a delegation from the Boston Board,

and E. F. Beddall and Cecil F. Shallcross of the New York head office of the Royal.

Boston's Fiery Experience.

Besides the two large Boston fires mentioned in last week's issue, a third occurred within a space of twenty-four hours from the first, by which a heavy damage was caused to the Charlesgate garage and a great many valuable automobiles burned.

If the enthusiasm does not evaporate, Boston will see some important improvements in its fire protective service before long, as a result of last week's experience. In the first place the narrow escape from destruction of the fire alarm headquarters has suggested the necessity of an auxiliary fire alarm for emergencies; in the second place it is represented that on account of the close call which the fire department headquarters had, it ought to be removed to some location where it is less in peril by exposure, and finally the value of outside sprinklers in checking the course of the fire was thoroughly demonstrated. The mayor and the acting fire commissioner are in accord upon these points and it is understood that the counsel of the Boston Board of Fire Underwriters is to be solicited in connection with their realization. The mayor, furthermore, seems impressed with the efficiency of the water towers and is reported to be in favor of having more of them.

New England Brevities.

The New England Casualty has secured William M. Olive, for many years identified with the United States Casualty, as home office agency director.

* * *

A ten thousand dollar fire damaged the Standard Oil Company's station at Fish Island, near New Bedford, Saturday afternoon. That the loss was not ten times as great, was doubtless due to the presence of mind of George

Henry Evans Gives Reason for Belief in Contingent Commissions.

JAMES V. BARRY, Commissioner of the Michigan Insurance Department, recently made an inquiry as to the wisdom of the contingent or profit-sharing plan for compensating fire insurance agents. In reply to this inquiry, Henry Evans, president of the Continental Insurance Company, had this to say:

"An insurance agent works out of sight and, having binding powers, can obligate his principal, the company, to assume any risk he sees fit to write. The risks of large value are generally inspected and reported on by salaried employes of single companies or combinations of companies, but the risks of small value cannot be inspected by such persons, except at such great cost as to preclude the possibility of profit, unless the rates are very largely increased over the present basis. Such being the conditions, much business is written by companies without true knowledge of the physical or moral hazard assumed, and often without regard to the market value of the property covered.

"A very large percentage of the insurance agents are honest and intend to do the right thing; but human nature is the same in all callings, and where the agent is not interested in the profit result the tendency is to err on the side that puts money in his pocket. It follows that business is written that should be declined, either because of physical or moral hazard (which becomes very serious when coupled with full or overinsurance), and a fire resulting from such condition may destroy much other property. When the agent is compensated fairly by a flat and contingent or profit-sharing commission he becomes an underwriter, watching new

construction, fire-fighting facilities, moral hazard, overinsurance and the physical or fire-breeding condition of each risk.

"In the conduct of the business of the Continental Insurance Company we have where possible interested agents in the profits of the business, and we believe we know that the result has been beneficial to us and to some extent to the public. Under its 'police powers' it would be possible for any State to enforce a law making all companies pay agents a flat and contingent or profit-sharing commission, such commission to cover all compensation the agent is to receive, the contract conditions being covered by a standard form of agreement, which would be necessary in order to prevent extra payments for the purpose of buying business.

"If this were done and all companies were obliged to compensate agents in this way the result would be, in my opinion, a decided reduction in losses due to the moral hazard, the burden of which has to be borne by the honest insurer, a gradual improvement in building conditions as well as fire-fighting facilities and an early and marked improvement in physical or fire-breeding conditions. I also think there would be an improvement in the class of men acting as agents, the ignorant and unreliable being forced out. If I am right, the fire waste would be reduced, competition would force the rates paid to insurance companies down, and the public would benefit, first, from a lessened fire waste, and, second, from lower rates.

"If it were in my power to control such matters, not as an insurance man, but as a citizen having knowl-

edge of the subject and desiring to serve the public, I would

"First—Have every rate made by the application of a detailed schedule (modeled after the Universal Mercantile Schedule) that penalized dangerous conditions and gave credit for unusual safeguards.

"Second—Make every company conduct its business on the profit-sharing basis under proper restrictions.

"Third—Have every fire investigated, holding the property owner to a strict accountability and the agent writing the insurance, also, if it developed that he had wilfully granted overinsurance.

"I believe that valued policy laws are against public policy, but if they must be enacted, I submit that any payment made in excess of the actual market value of a piece of property should go to the State and not to the individual."

THE ROYAL TO WRITE OCEAN MARINE INSURANCE.

A deposit of \$200,000 has been made with the New York State Insurance Department by the Royal Insurance Company of Liverpool, for the purpose of complying with the law regulating the right to insure ocean marine risks. Superintendent Hotchkiss has approved the Royal's application for authority to write, and the application is now before the Attorney General. The Royal plans to begin issuing ocean marine policies in the early fall. The Royal controls the British and Foreign Marine Insurance Company, and the American and Foreign Marine Insurance Company. The Queen Insurance Company will also write ocean marine shortly, thus providing four marine policies.

PRESIDENT LOTT TALKS.

(Continued from Page 3.)

pressure in tunnels or foundation work, for the reason that it is a necessary concomitant of that work that workers will be overcome by the conditions and dangers of their work, yet 'it is almost unthinkable that the Legislature should enact laws prohibiting such work.' The commission maintained that because the Legislature had refrained from exercising its power to prohibit such work was not a valid reason why it should not 'prescribe that any employer who carries on such dangerous work shall pay for the loss of limbs and lives of the workers who are of necessity sacrificed to it.'

Dangerous Employments.

"The Legislature accepted the recommendations of the commission and passed a 'compulsory workmen's compensation law, relating to certain dangerous employments,' which provides that:

"If, in the course of any of the employments above described, personal injury by accident arising out of and in the course of the employment after this article takes effect is caused to any workman employed therein, in whole or in part, or the damage or injury caused thereby is in whole or in part contributed to by (a) A necessary risk or danger of the employment or one inherent in the nature thereof; or (b) Failure of the employer of such workman or any of his or its officers, agents or employes to exercise due care, or to comply with any law affecting such employment; then such employer shall, subject as hereinafter mentioned, be liable to pay compensation at the rates set out in section 219a of this title; provided that the employer shall not be liable in respect of any injury which does not disable the workman for a period of at least two weeks from earning full wages at the work at which he was employed, and provided that the employer shall not be liable in respect of any injury to the workman which is caused in whole or in part by the serious and wilful misconduct of the workman.'

"To preserve its constitutionality the law provides that:

"The right of action for damages caused by any such injury, at common law or under any statute in force on January 1, 1910, shall not be affected by this article, and every existing right of action for negligence or to recover damages for injuries resulting in death is continued, and nothing in this article shall be construed as

limiting such right of action, but in case the injured workman, or in the event of his death his executor or administrator, shall avail himself of this article, either by accepting any compensation hereunder in accordance with section 219a hereof or by beginning proceedings therefor in any manner on account of any such injury, he shall be barred from recovery in and deemed thereby to have released every other action at common law or under any statute on account of the same injury after this article takes effect. In case after such injury the workman, or in the event of his death his executor or administrator, shall commence any action at common law or under any statute other than this article against the employer therefor he shall be barred from all benefit of this article in regard thereto.'

"This provision was necessary because the Constitution of the State of New York says that the right of action now existing to recover damages for injuries resulting in death shall never be abrogated; the trial by jury in all cases in which it has heretofore been used shall remain inviolate forever; but a jury trial may be waived by the parties in civil cases in the manner to be prescribed by law. Of these constitutional provisions the commission said:

"We regard it as settled that the Legislature has power, if it so chooses, to enact laws changing or abrogating the common law on employers' liability, or the Employers' Liability Act, or any other statutes in regard thereto, and in particular (a) laws limiting or abrogating the fellow-servant defense; (b) laws limiting or abrogating the defense of contributory negligence, or changing the burden of proof thereof; (c) laws limiting or changing the doctrine of assumption of risk and of violation of law by the employer; (d) laws permitting employer and employee to contract out of the liability of the employer on prescribed terms; (e) laws creating an elective system of compensation, to take the place of the present system of negligence, applicable to such employers and employes as accept it.'

Workmen's Compensation.

"The Legislature adopted the views of the commission, and in addition to passing a compulsory workmen's compensation law for dangerous employments, it amended the general employers' liability law so that on and after September 1 the employer becomes liable 'when personal injury is caused to an employee who is himself in the exercise of due care and diligence at the time—by reason of any defect in the condition of the plant,

or any part thereof, which defect had not been discovered or remedied owing to the negligence of the employer or any employee intrusted by the employer with the duty of seeing that the plant was in proper condition; or by reason of the negligence of any person intrusted with authority to intrusted with any superintendence; or by reason of the negligence of any person intrusted with authority to direct, control or command any employee in the performance of the duty of such employee. The necessary risks of the employee shall only be those inherent in the nature of the employment after the employer has exercised due care in providing for the safety of his employees and has complied with all the laws affecting or regulating his trade or business for the 'greater' safety of his employees. In an action for damages arising from personal injury, 'owing to any cause, including open and visible defects, for which the employer would be liable but for the hitherto available defense of assumption of risk by the employee, the fact that the employee continued in the same place and course of employment after the discovery by such employee, or after he had been informed of the danger of personal injury therefrom shall not be, as matter of fact or as matter of law, an assumption of risk of injury therefrom, but an employee, or his legal representative, shall not be entitled under this article to any right of compensation or remedy against the employer in any case where such employee knew of the defect or negligence which caused the injury and failed, within a reasonable time, to give, or cause to be given, information thereof to the employer, or to some person superior to himself in the service of the employer, or who had intrusted to him some superintendence, unless it shall appear on the trial that such defect or negligence was known to such employer, or superior person, prior to such injuries to the employee; or unless such defect could have been discovered by such employee by reasonable and proper care, tests or inspection.' On the trial of any action for damages, contributory negligence of the injured employee shall be a defense 'to be so pleaded and proved by the' employer.

Defenses Cut Out.

"It will be seen that September 1 will bring with it the doing away, to all intents and purposes, with several important defenses which the law has always accorded employers when sued by an employee for damages arising from an accident. Hitherto if the accident was caused by a fellow servant

(by another employe of the employer) the employer was not liable. The new law says that if the accident is caused by any employe intrusted with any superintendence or by any employe intrusted with any authority to direct, control or command any employe, then the employer is liable to the injured employe for such damages as a court and jury may decide. Formerly the injured employe had to prove that he was not at fault—that he was free from contributory negligence. On and after September 1 the employer must plead and prove that the injured employe was negligent, else he cannot use that as a defense. Until the new law was passed, it was always held that when a person sought and secured employment he assumed within reasonable bounds the natural dangers to personal injury which went with his employment. Many employers will feel that the changed conditions which come with the new law impose a hardship on them.

"However, the trend of the times is toward the doctrine of 'compensation' as distinguished from 'damages' for the injured workman, and truly the new laws are but the first fruits in this country of a doctrine which has secured a firm footing in many countries and which is growing apace here, several States having commissions actively engaged in drafting bills to be presented to their legislatures.

"The result is that on and after September 1 a workman who sustains an accidental disabling bodily injury while at work in this State in certain employments will be entitled to accept the 'compensation' fixed by the Compulsory Workmen's Compensation Law for such injury, or he may disregard the new law and bring suit under the law as it existed before the enactment of the new law. He may choose the old law or the new law.

"And the employments named in the Workmen's Compulsory Compensation Law will be increased by each succeeding Legislature until all employments are embraced within the law. The insistence of those workmen and voters in employments not now covered by the new law, that their employment is also 'especially dangerous' and should receive the same protection as is afforded other employments, cannot be ignored by our lawmakers. Some employments will come ahead of others, but finally all will be included. Indeed the report of the commission reads:

"In the last ten years the conclusion has been slowly but surely generating in the public mind that present conditions as to employers' liability are intolerable. We are firmly of opinion that the time has come for the

enactment of laws on this subject which shall be at least the first step to a satisfactory solution of the difficulties of our present system.

"And each Legislature will make amendments to the law That is inevitable. So we shall have annual changes on our labor laws for many years to come. Perhaps it would be more correct to say that from now on for many years we shall have 'one year' laws on the subject of employers' liability. Wise is the man who can accurately forecast what the ultimate result will be.

"The effect on employers in this State will be that accidental bodily injuries to their workmen will cost them more than formerly, whether such employers insure or carry their own risks. The cost to those employers who come within the scope of the Compulsory Workmen's Liability Law will be vastly increased, while the cost to all employers will be greatly increased by reason of the amendments to the Employers' Liability Law moreover, the Compulsory Workmen's Compensation Law will prove more far-reaching than the lawmakers probably intended, for the wording of the law is sufficiently loose and elastic to permit of a very wide application. There is hardly an industry which is sure to be exempt from the application of the law under some conditions and circumstances, but to enumerate such conditions and circumstances would require many columns of newspaper space.

"The courts will probably decide that both the new laws are within the police power of the State and constitutional, although they may put a narrow construction upon them to justify such conclusions.

Position of Underwriters.

"The position of casualty insurance companies issuing employers' liability policies protecting the insured against claims and suits of any damages to employees arising from accidental bodily injuries to such employees will be to carry present policies to maturity, in most cases, without an increased premium rate, because the Compulsory Workmen's Compensation Law is not covered by the employers' liability policies now in use and the amendment to the Employers' Liability Law simply increases the hazard which was assumed by the insurance companies when existing policies were issued. Since Governor Hughes signed these two acts every casualty insurance company doing business in this State has been active in compiling data having a bearing on the question of rates for policies going into effect after August 31, and for adding

the compulsory compensation coverage to those policies heretofore issued and which will remain in force after that date. There has been a free exchange of this data between companies and numerous conferences of company officials. Most companies will have their new rates ready within a day or two. Insurance companies are now notifying their policyholders that present policies do not cover liability under the compulsory compensation feature and offering to add such

coverage, at adequate premium rates, upon application.

"I do not speak of the 'Alternative Compensation Plan' of these laws, because I think the cumbersome method of its use will prevent its adoption by employers, and the increased benefits to employees under the other sections of the new laws will render it undesirable to employees—and it can only be made operative by the written agreement of the employer and the employee."

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

Bob's Remarks.

THE latest announced formation, under the recent New York State laws, approved by Superintendent Hotchkiss of the Insurance Department, is that of the United States Underwriters. This is a strong aggregation of assets amounting to more than four million dollars. The composition consists of four companies—North River, Nassau, Empire City and United States insurance companies. It is needless to state that the firm of Crum & Forster, at 95 William street, are the general agents.

The United States Underwriters have, by reason of authority from the State, commenced writing business in the metropolitan district and elsewhere. Because of this, some remarks have been made in local underwriting circles as to the eligibility of this group of assets to do business with certified brokers when it was not a member of the New York Fire Insurance Exchange. It will be remembered that the hand book of the Exchange, under date of April, 1903, quoted the Philadelphia Underwriters as being members at that time. Also that the Pittsburgh Underwriters, with over six million dollars of combined assets and composed of five strong companies, each of which is a regular member of the exchange, is not permitted to join the New York Fire Insurance Exchange because of so-called double representation in the metropolitan district, or vote in the exchange. As this is a vital point and the "street" is somewhat "talky" about the general status of "combination underwriters," I desire to dwell briefly on the subject. It is asserted that, under the rules, nothing but a regular incorporated fire insurance company can be eligible to membership in the exchange. Exception was made in the case of the New York Underwriters Agency owned and controlled by the Hartford. On the other hand, attention is called to the fact that, not only is the new United States Underwriters represented by Crum & Forster as general agents,, but the companies composing the aggregation are in the office of this firm. In other words, there are four individual contracts spread out on one piece of paper. As to double representation or vote, that is a matter for further consideration. Parallel cases might be cited regarding the English-American Underwrit-

ers, Republic Underwriters, Globe Underwriters and so forth.

Within the past few weeks large lines have been placed on that very desirable class of merchandise—raw silk. One of the chief and most popular warehouses where these goods have been stored is in Spring street, Manhattan, at 212 and 214. It is estimated that between twelve and fifteen million dollars worth of raw silk is stored in this building—one large brokerage firm alone placing more than a million. The rate is a trifle under twenty cents.

One broker has suggested the "Eastern Union" as a good name for any new fire insurance company which might be formed.

Announcement is made that the Manufacturers and Traders Insurance Company of Minneapolis, Minn., has been duly chartered and licensed by that State. The authorized capital is \$500,000, of which \$100,000 has been subscribed. Its writings are to be confined strictly to risks equipped by automatic sprinklers. All communications are to be addressed to William Wright, general agent, Eastern Department, 257 Broadway, New York.

The Hudson Inspection Bureau, with offices in the Union building, Jersey City, and of which Thomas P. Hohlweck is the proprietor, appears to be making satisfactory progress. The bulletins are issued three times a week and furnished to subscribers (only) for their sole use and information, inspection reports, including advisory estimates of hazards involved.

To illustrate how some risks, located outside of exchange territory, are handled by aggressive New York brokers under high pressure, I quote an instance. Property situated in upper part of New York State—insurance over \$200,000—local tariff less than 30 cents per annum. At tariff rate the agents would have allowed the New York broker 15 per cent. But he was looking after the interest of his client and placed the entire line at less than 50 cents for three years in New York head offices, and accepted 10 per cent. commission.

INSURANCE COMPANY

ESTABLISHED 1836. ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS	\$13,885,802.88
LIABILITIES	8,766,622.58
SURPLUS	\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of \$2,710,650
And increase of assets in the same time of 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

MASSACHUSETTS ON LIFE AND MISCELLANEOUS INSURANCE.

Commissioner Hardison of the State Department Tells Why the Change in the Life Situation
During the Past Five Years Has Been Gratifying—He Commends
Tendency to Classify Life Hazards.

BOSTON, Aug. 25.—The text of Part II of the fifty-fifth annual report of the Massachusetts Insurance Department, covering life and the "miscellaneous" insurances, was made public to-day. Insurance Commissioner Hardison, as is his wont, presents well-pondered considerations relating to these branches of underwriting, from which the following extracts are taken:

"One of the marked changes in the laws relating to insurance made by the Legislature of the present year was the enactment of the statute providing standard provisions for health and accident policies. This act goes into effect on January 1, 1911, and is substantially like the law enacted in New York the present year. This act is the result of work done by the Insurance Commissioners of the various States, who, seeing that policies issued by accident companies were in many respects unsatisfactory, determined to draft a bill and offer it for consideration to the Legislatures of their several States. It is expected that many other States besides New York and Massachusetts will enact this bill into law, and thus give practical uniform legislation on this question in a very large proportion of the States. This will be in the interest of the companies, as well as the policyholders, and is simply a step in the direction of uniform legislation, which should be followed, and doubtless will be followed, by other attempts on the part of the Insurance Commissioners to

pave the way for harmonizing the essential provisions of the insurance laws of the various States as far as practicable.

"Other changes in the law permit insurance against loss from the death of domestic animals and the furnishing of veterinary service on a paid-up capital of \$100,000, and grant to steam boiler insurance companies the right to insure against loss of use and occupancy caused by the explosion of steam boilers and flywheels.

Certain Classes of Reserves.

"Reserves as now looked upon in insurance circles have a wider significance than formerly, or before liability, surety and credit insurance began to be written. Reserves and unearned premiums were then practically synonymous terms. Now, besides the premium reserve, we hear of loss reserves—that is, funds held for undetermined losses upon which the contingency has occurred which entitles the insured to indemnity, the amount of which remains to be determined. In the three classes of insurance above noted loss reserves of this character have to be held in large amounts. In only one class, however, does our statute establish a rule for computing such reserves. Yet while it does establish a method of doing it for liability companies, there is a general belief, shared by the Insurance Commissioner, that this reserve, although it greatly increased the amounts held by the companies prior to its going into effect, is not large enough to protect properly

the interests which are depending upon it. Settlements under this class of policies are sometimes delayed for ten years or more, so that there are companies which cannot to-day give a completed experience on liability policies issued in the year 1900. Greatly to their credit the companies doing this class of business are eager to have new laws enacted which shall provide for the setting aside of adequate reserves, and a committee of managers of these companies, representing practically all of them, is engaged in an exhaustive investigation to determine from the past experience of the companies what reserves should be carried to adequately protect their policyholders. The Insurance Commissioners also have taken up the same question through a committee, and later there will be a conference with the committee of the companies to compare notes and come to conclusions. Quite likely a bill will be drawn up for the consideration of the Commissioners at their next convention, and if it passes muster then it will doubtless be presented to the Legislatures of the various States for their consideration and judgment.

The Life Insurance Situation.

"The change in the life insurance situation during the last five years has been very gratifying. Then there was excitement, uncertainty, fear and distrust. To-day the companies then out of favor are proceeding in their work

(Continued on Page 8.)

Employers' Liability Insurance in Norway

By Miles M. Dawson

Copyright, 1910, by Miles M. Dawson.

CHRISTIANIA, Aug. 3.—Norway is the one country in Europe which has compulsory insurance of employes in a State insurance department; that is, it is the only European country in which "State insurance," as the term is understood in the United States, monopolizes the field. The system in Luxembourg is nearest to it; after that little country, Austria, and next, with a long remove, Germany, where the system is really not State insurance at all, but only compulsory mutual insurance. Switzerland, however, is about to do likewise.

In Norway, every employer must insure—no, that is not the correct statement nor would it even be correct to say that every employer is insured; the correct statement is that *every employe is insured*, and his employer must pay the premium—in Rigsforsikrings anstalten (the State Insurance Office).

The expenses are low, but not lower than under the German system. Since the inauguration of the Rigsforsikrings Anstalt in 1894, they have averaged 12 per cent and in 1909 they were 10½ per cent of the premiums. Further reductions are not probable; the expense rate has been nearly stationary for several years past. In 1909 the home office expenses of all kinds were 5.8 per cent and the cost of field supervision, collections and adjustments was 4.7 per cent.

The management is absolutely bureaucratic. The Director is the highest in authority, and all matters, wherever arising, come to him for final decision, subject to revision by an "Appeal Commission," if asked for. Thus he fixes all benefits for partial disability, as advised by his physicians, and also decides whether the Anstalt is liable or not. He may at will refer any doubtful question to the courts, or, if a question of construction of the law is involved, the courts may take original jurisdiction. Otherwise there is no appeal to the courts; but all findings and decisions of the director may be revised by the Appellate Commission, consisting of seven men—i. e., three, a lawyer, a doctor and an engineer, all appointed by the Government, and two employers and two workmen, elected by the Storting, or Parliament.

The validity of a claim and the amount for which it should be allowed are determined as follows: The local supervisor is notified by the employer within three days after the accident. Facts concerning the employment and the nature and extent of the injury, if not fatal, or the number and ages of surviving dependents in case of death, must be given by the employer. The supervisor also requires the physician to make a detailed report, and he himself makes inquiries—preferably by telephone in order to save travelling expenses—which he embodies in a report. These go to the office in Christiania and are passed upon by the head physicians, who estimate the degree of impairment; by the other officials, who compute the wages upon which indemnity is based, and finally by the Director.

At present the employer directly pays for medical care up to the end of the fourth week, and the Anstalt is liable only beyond the fourth week. Its indemnity is 60 per cent of the wages (or of the impairment of earning), payable monthly.

After July 1, 1911, sickness insurance, covering medical care and indemnity for the first four weeks in event of accident, as well as medical care and indemnity for sick-

nesses of all durations will be supplied through mutual sickness insurance associations, to which workmen must belong. These will be supported by contributions of employers, of employes and of the Kingdom. They will be supervised but not managed by the Anstalt; the management is by trustees, partly elected by contributing employers, partly elected by the employes who are members and partly appointed by authorities.

The premium rates for the accident insurance are fixed up for three years at a time and cannot be changed during that time. They are the same for industries of the same class, no discrimination being made for want of care, unsafe conditions or defective machinery. But they are based upon previous experience, which is made public also. New rates took effect January 1, 1909; another revision, which will be the most thorough ever made, will be completed in time for 1912.

The Director, Mr. Thorwald Strom, who, by the bye, was an engineer on the Panama Canal under De Lesseps, and who also completed the railway to Bergen for the Norwegian Government when the Italian contractors gave it up, says that it would be better if the Anstalt could vary the rates (say one-half per cent of the payroll, up or down), as the hazard of individual establishments requires, and so could punish and thus prevent want of care, absence of preventive precautions and the like. This would doubtless tend to reduce the rates.

In order to do so, however, it would be desirable to place factory inspection under the Anstalt, which the Government does not yet favor. At present, the district supervisors of the Anstalt notify the inspection department, as well as the Anstalt, of each accident. The inspectors also collect information, but not for the Anstalt. So there is a certain amount of duplication and a somewhat larger expense; the Director also thinks the work would be better done, both for his department and as regards inspections, if these trained inspectors were also the Anstalt's local supervisors.

Employers complain a good deal of the rates being high, but these complaints are subsiding somewhat, it is said. The insurance is on the "claim reserve" basis; that is, whenever a pension is allowed, a reserve equal to its present value is set up. This method, of course, called for employers paying much larger premiums than would have covered merely the current outlay, as is the case under the German system, for instance. But now the difference is not so great.

Under the claim-reserve method reserves of about \$3,000,000 have accumulated, which is not small for a country with but 4,000,000 inhabitants. Originally and until December 31, 1907, the present values were computed by the invalid-life tables, derived from the Austrian experience. This proved, however, to exhibit nearly three times the mortality actually experienced. Consequently, the reserves were recalculated as of that date (and since then are calculated) by the Norwegian population mortality table (males) for all pensions actually fixed, and by the Austrian table only while benefits are being paid after the fourth week, while it is yet regarded as uncertain whether the injured workman will recover, die or be permanently invalidated, either totally or partially. On this basis the required reserves were found to be 12,102,510 kroner (about \$3,200,000), instead of 10,-

026,433 kroner (about \$2,700,000). This indicated a deficit of k556,135, instead of a surplus of k1,519,941. This deficiency has already been much reduced and is regarded as negligible.

Previously and on the old basis a deficiency of k900,000 existed. Parliament voted to make it good, but only k750,000 proved to be required. Though these conditions do not show that absolutely adequate premiums have always been paid, they approximate that desirable standard much more nearly, for instance, than in Austria which adopted a similar plan almost ten years earlier.

Much less than one per cent of the claims reach the courts, but about 22 per cent of the determinations by the Director are appealed to the Appellate Commission. This large percentage is ascribed to the fact that appeal is free; but doubtless it is also due to the circumstance that the original verdict is so completely bureaucratic, in arriving at which the workman and his associates have no part. In fact, the workman makes no claim, files no statement, offers no proof. All is done for him, which is not altogether satisfactory for him, though there is no serious complaint in that regard.

The premium income is about 2,000,000 kroners (\$540,-

000) per annum. About 30,000 employers contribute, but this includes fishermen and timber men, lately brought under the law. Only about 12,000 other employers are embraced by the law. The premium is based on the payroll of the previous year; half is paid in advance and half after six months. At the end of the year an additional amount is asked for or a rebate is made, as the case may be, to adjust the premium to the actual payroll of the year.

Except as to fishermen, the collection is through the Anstalt's supervisors, the amount to be collected being based upon the result of an examination of the payrolls by travelling accountants of the Anstalt. These premiums are turned over to the Anstalt directly. If not paid promptly the State enforces payment by selling the employer's property precisely as for failure to pay other taxes. Of course, the premiums are of the nature of taxes, and in this mode of enforcing payment of the same the similarity appears. The premiums to be paid by fishermen are a given amount per man and are collected precisely as other taxes—i. e., through the regular tax collectors. They are then turned over to the Anstalt. In each case a small percentage is paid for collection.

Seen and Heard in the West.

CHICAGO, August 24.—One of the entertainments the Chicago agents have planned for the National Association of Local Agents is an afternoon at the Underwriters' laboratories. Every intelligent fire insurance agent in the country has heard of the laboratories, and many of them have had a curiosity to visit them. In making up the programme of the convention the Chicago agents propose that the agents be taken to the laboratories, where the management has agreed to give some tests of sprinklers, wire glass and perhaps other extinguishers and retardants with which the agents are familiar. That this would be of great educational value, as well as of interest, nobody will doubt. Furthermore, it may help impress some of the agents who have not yet given the subject the consideration to which it is entitled with the importance of the fire protection movement.

Recently a Western manager was calling attention to the very great progress made by the Globe & Rutgers, as shown by the figures. His own company is orthodox; it is one of the companies rated by the National Association of Local Agents as "co-operating," and it has expressed no intention of withdrawing from that class. Nevertheless, the manager was impressed with the apparent success of the leading non-co-operating company, and was inclined to the belief that its success

was in some degree due to the fact that it was not obligated to avoid overhead writing.

This is a question to which some managers have given considerable thought. They see more business going constantly out of the hands of their local agents to the large city brokers, who give better service than very many of the local agents do. If the brokers see fit to let the agents write this business at their terms, and the agents see fit to accept those terms, these agency companies stand a chance of getting a share of it; but, if the agents and brokers do not come to terms, the brokers simply place the business in companies that will write it, which often means that the agency companies lose out in favor of non-agency companies. If this process continues it will be a question with companies whether they can better cater to the agents or the brokers. Apparently the only way the movement can be stopped is by agents giving enough study to schedule rating and fire protection to enable them to meet the brokers on even terms of service and hold their business against them.

The announcement that Franklin H. Wentworth, Secretary of the National Fire Protection Association, will be one of the speakers at the Northwest meeting in Chicago in October will be received with pleasure by those who are watching the development of the programme and who know Mr. Wentworth's abilities.

He left a deep impression upon those who came in contact with him at the meeting of the National Fire Protection Association in Chicago last Spring. The subject of fire prevention is now so prominent in Western field circles that the selection of Mr. Wentworth as a speaker at a field men's meeting was most appropriate.

Prof. A. W. Whitney, of the University of California, actuarial adviser to the New York committee which is to investigate insurance, spent part of last week and the early part of this week in Chicago, in consultation with fire insurance men and others who might be able to give him information that would be of value to the investigators. He had sessions with A. F. Dean, the rating expert and deep student of the business in other aspects; with O. B. Ryon, attorney of the Illinois commission which has been investigating the subject in this State, and with some representatives of the assured who have given the subject study.

The Republican primary campaign in Michigan which is a very hot one, has some interest for fire insurance men from the fact that Charles S. Osborn, of Sault Ste. Marie, one of the leading candidates for the gubernatorial nomination, has declared himself in favor of a good fire marshal law for the State. Partly on this account the Soo local agents have endorsed his candidacy, and field men are reported to be taking a hand.

A considerable element in Michigan has been desirous of a fire marshal law for some time, but it is very difficult to get in that State, as it is impossible to fasten the cost of it directly upon the fire insurance companies, as has been done in other Western States. The constitution of Michigan provides that all moneys received from insurance companies in excess of the expenses of the Insurance Department shall go to the public school fund. When an attempt was made to amend this provision the school teachers defeated it. Apparently, then, the people of Michigan must pay for their fire marshal directly or the constitution must be circumvented by having the Insurance Department assume the fire marshal's duties and tax the companies enough more to cover the additional expense.

About two years ago the local agents undertook to get the office of fire marshal created, the expense to be paid from the revenue derived from a graded license tax on agents. This measure never became a law. Evidently the friendly attitude of the high powers will be necessary, if Michigan is to have a fire marshal.

The Equitable Life of Iowa Agency Association held its second annual meeting in Chicago last week. Over forty general and district agents were present, besides a number of home office people, agents and others. It was a somewhat unusual meeting, partly because it was possible to get started at 9 o'clock in the morning and run till 6 at night, with only a couple of hours or less for luncheon, and partly because of the evident eagerness of those present to learn something. The general agents of the

Equitable of Iowa are men who take their business seriously, and they did not visit Chicago for a lark.

The whole aim of the meeting seemed to be to increase the efficiency of each as an individual producer. The papers by the agents themselves related almost exclusively to the discussion of those traits of mind or character which influence the success or failure of an agent, and to such questions as meeting fraternal and non-participating competition and keeping business on the books. Questions of agency development and management, field organization and office management received almost no attention. The papers by the home office representatives treated of advertising, home office rules, dividends and comparison of the mutual and stock plans of management. The only outsider who addressed the regular meeting spoke on salesmanship.

At the banquet which the company tendered the agents at the close of the meeting one of the leading speakers was Dr. W. A. Evans, Health Commissioner of Chicago, whose work has caused health officers from one end of the country to the other to ask, "How do you do it?" One feature of Dr. Evans's speech was of particular interest to life insurance men in that he advocated their taking an attitude toward the public health similar to that of fire insurance companies on municipal fire protection. When a fire department runs down a city, outgrows its pumping and distributing system or the water works department is badly handled, the fire insurance companies are heard from with demands for improvement, coupled with threats of advanced rates. Dr. Evans main-

tains that conditions conducive of epidemics and of heavy mortality should receive the same sort of attention from the life insurance companies and their representatives.

Throughout the Middle West there is a noticeable tendency among liability insurance men toward greater co-operation. One of the first moves in this direction was the reaching of understandings in several cities as to automobile liability insurance. Automobiles being rated by classes and not individually, it was easier to secure agreements or understandings than in the general field of liability insurance, where most large risks are rated considerably on their individual character or experience.

The passage of the Norris law in Ohio, abrogating most of the old defenses of the employer and requiring a radical advance in liability rates has furnished the occasion for agents to call a halt on the cut-rate tactics which have prevailed. Reports from that State are to the effect that agents generally agree that the only proper policy for them to pursue when they get the new rates is to adhere to them strictly.

In Minnesota, where previous attempts at local co-operation have been made, there is now a movement for a State organization. Observant general agents elsewhere in the West are impressed with the fact that the situation in New York has forced the companies to co-operate in a way they had believed impossible to bring about, and this encourages them in the belief that this harmony will to some extent penetrate to the distant portions of the field.

Need of Negro Mortality Tables.

AT THE annual convention of the National Negro Business League in this city last week G. W. Powell, of Durham, N. C., read a paper on "Industrial Insurance Among Negroes." He told of the disadvantages of this branch of the insurance business, citing the case of one agent who had made 120 calls to collect \$5. On the other hand, he said, figures would show that the disadvantages did not offset the solid benefits. According to the report of the Insurance Commissioner of North Carolina for 1909 \$114,737.58 was paid to beneficiaries by negro insurance companies of the States; a balance of \$112,274.91 remained. Negro companies in Virginia, North Carolina and South Carolina em-

ployed more than 3,000 men and women. Industrial insurance in North Carolina, he said, might be regarded as a stepping stone to larger fields of insurance.

Negro companies had to work without the benefit of mortality tables, those applying to the white race alone being available. Within the next few years negro mortality tables would be compiled.

"In any event," he said, "we hope that the coming years will see such a change in sanitary conditions and general mode of life among negroes that the white tables will apply to our people as well."

E. F. Johnson, of Richmond, Va., spoke on health and accident insurance. He praised the law passed a

few years ago which required insurance companies to deposit \$10,000 with the State Treasurer. At first it seemed a hardship and a number of companies were put out of business. This, all had now come to see, was a good thing, as the companies which now exist—four negro and six white—are on a sound financial basis, warranting the confidence of members of the race throughout the State. Insurance companies had suffered, together with other institutions, as a result of the action of the State Legislature in increasing the tax rate to make up State revenues lost as a result of the temperance movement. The gross premiums paid to the ne-

Pacific Coast Casualty and Excise Bonds.

AN APPLICATION has been made on behalf of the Pacific Coast Casualty Company to the New York State Insurance Department for authorization to trans-

act a general casualty insurance business in this State, and the charter of the company is now before the Attorney General for his consideration. General casualty insurance business

in this State covers the power to issue policies applying to excise bonds.

It is said that Superintendent Hotchkiss wished to have some of the company's securities changed so as to agree with the New York requirements, and this was done on Tuesday, the department being advised by telegraph to that effect. The metropolitan agency of the company, according to the home office plans, will be placed with Whilden & Hancock.

The Pacific Coast Casualty purposes to follow the principles of the ten or twelve companies in the combine for writing excise bond business. The manager of this special department, who is now in Albany in the interest of the company, has been instructed to adhere strictly to the State laws and to conservative underwriting, and the character and reputation of the company in its home State accord thoroughly with this instruction.

The second chapter of the series of articles on "Employers' Liability Insurance Abroad," by Miles M. Dawson, was received this morning from Stockholm, Sweden, and will appear in THE CHRONICLE next week.

Clement's Excise Problem.

ELMIRA, N. Y., Aug. 24.—In an address before the annual convention of the New York State Liquor Dealers' Association, which opened here yesterday, State Excise Commissioner Clement delivered an address in which he asserted that liquor sellers must obey the law, because they cannot afford to do otherwise.

"Are the men," he asked, "who demand and approve the Sunday service of liquor and for the benefit of whose appetites liquor dealers are taking chances of being penalized, creating any favorable sentiment? Not at all, and they never will as long as their wants are supplied illegally, but they would be heard from if their wants could not be supplied until the law had been modified and heard from effectively, if it be true, as some claim,

that they represent the majority.

"On the other hand, open disregard of law is continually provoking the non-drinking population of our State into aggressive hostility against the traffic, and so by disregard of law unfavorable public sentiment is continually being manufactured.

"During the fifth year after the organization of the Excise Department penalties were collected by the State in civil actions from excise violators amounting to \$32,594. During the tenth year penalties were collected aggregating \$173,000, and during a little more than ten months of the current year we have collected from the same sources upward of \$380,000. Since 1896 penalties have been collected from individual violators and their bondsmen aggregating more than \$2,330,000."

Thursday Morning Postscripts.

THE tenth annual convention of the Associated Fraternities of America is in session at Atlantic City, having opened on Tuesday. It was formed in Chicago ten years ago to protest against the movement to establish minimum rates of assessment in fraternal societies by compulsory legislation. It was composed at its organization of less than

twenty societies, and those mostly smaller organizations in the Middle West. It has grown until now there are fifty-two societies affiliated with it, with a combined membership of more than 3,000,000, representing protection for widows and orphans approximating \$4,000,000,000 and net assets of \$36,000,000. It declared at the start for adequate rates.

Edwin K. McConkey, Secretary of the Farmers' Insurance Company of York, Pa., and a Senator in the Pennsylvania State Legislature of 1902, died at his home in York yesterday at the age of 46 years. He was prominent in the insurance, banking and other business circles of Western Pennsylvania.

NEGRO MORTALITY TABLES.*(Continued from Page 4.)*

gro companies, he said, aggregated more than half a million dollars.

C. C. Spaulding, of Durham, N. C., also spoke on insurance. In 1909, in Durham, two negroes died to every one white man, he said. Inexperience of negro men in insurance was another evil. Until recently white companies had not employed negroes as agents. "My company collected about \$800 eleven years ago. Last year we collected more than \$200,000. That is a remarkable showing, but it was against the odds of which I have spoken. With more healthful conditions, with mortality tables applying to negroes there would be a boundless future for us to face."

Dr. W. A. Attaway, of Greenville, Miss., spoke on mutual benefit insurance in his State. The business, he said, had been helped by the fraternal orders whose insurance features had educated the negro people and paved the way for the organization of regular insurance companies. Thomas T. Jackson, of Pittsburg, told of the working of fraternal insurance among negroes in Pennsylvania.

E. S. Peters, of Mobile, Ala., continued the insurance discussion. Then some one asked why negro mortality was greater than that of the white. C. C. Spaulding said that the environment in which they lived, their ignorance and lack of sanitary conditions were responsible.

"In some territories in which we operate," he said, "there are no negro physicians, and the white doctors are so busy that they do not find time to attend to sick negroes until it is too late to save them."

A speaker said that the main cause of excessive mortality among negroes was due to overeating, also to eating badly cooked food. "We should marry women who know how to prepare our food properly. We should learn to wear proper clothing and to have our homes properly ventilated. Then, provided we go to bed early and rise with the chickens (laughter) we will be as robust as our white brothers."

By a four-fifths vote in the lower house of the Texas Legislature, the report of the majority of the Free Conference Committee on the insurance rate bills was rejected, and the special session is through with their consideration. Gov. Sanders has already called for another special session to go over the whole matter.

CORRESPONDENCE COURSES IN ACTUARIAL SCIENCE.

Persons living a distance from New York will be received as correspondence students in the courses of actuarial science and practice, given at the New York University School of Commerce, which will begin the first week of October. In addition to instruction in actuarial science, the School of Commerce curriculum includes evening courses in fire insurance, real estate, corporation finance, investments, business organization and business correspondence. The courses in actuarial science are given under the direction of Miles M. Dawson, Fellow by examination of the Actuarial Society of America and the Institute of Actuaries of Great Britain, and of Henry Moir, ex-Vice-President of the Actuarial Society of America, Fellow by examination of the Institute of Actuaries of Great Britain and the Faculty of Actuaries of Edinburgh, Scotland.

In regard to further information as to these courses, inquiries should be addressed to The Secretary, School of Commerce, Accounts and Finance, Washington Square East, New York City.

OKLAHOMA'S TURN NOW.

Oklahoma seems to be the next State to draw the attention of insurance companies to matters pertaining to its legislative attitude toward insurance. A new corporation license tax was imposed at the special session of the Legislature this year. While the tax became payable on August 1, it was discovered that comparatively few corporations were aware of its requirements. Consequently the State Corporation Commission has announced that it will not prosecute for delinquency before October 1.

All corporations other than public service corporations, trust companies, banks and building and loan associations must pay an annual license tax

of 50 cents per \$1,000 of capital stock for State companies and \$2 for foreign companies.

A fine of \$100 a day is provided for each day after the tax is due, with expulsion from the State if the fine is not paid. This will impose a heavy additional tax upon the insurance companies, a company with a million dollars of stock being required to pay \$2,000 in annual taxes.

This is in addition to the other heavy taxes imposed by the State of Oklahoma, which are 2 per cent on the net premiums, in addition to \$3 for each agent's license and occupation taxes imposed by numerous municipalities ranging from \$5 to \$25 per agent.

FIRE CHIEFS CONVENE.

More than 250 chiefs of fire departments from every important city in this country, from Canada, and even from Honolulu, with women guests and friends, are in attendance this week at the thirty-eighth annual convention of the International Association of Fire Engineers in Syracuse.

One session was devoted to discussing the practical use of the automobile as a fire fighting apparatus by Chief Charles S. Allen, of Trenton, N. J., and Chief Frank D. Reynolds, of Augusta, Ga.

Insurance representatives brought the attendance over the 400 mark.

National Fraternal Congress in Detroit.

THE twenty-fourth annual meeting of the National Fraternal Congress in Detroit last week was called to order by President Thomas H. Cannon, with 150 delegates present, the largest representation in the history of the Congress, and the succeeding hour was devoted to the usual addresses of welcome and the response thereto, the welcome to the State being by Governor Fred H. Warner, and that to the city by Comptroller Heineman, acting for Mayor Breitmeyer.

President Cannon in his annual address had this to say of the tentative uniform bill:

“During the past year there have been two important conferences between the Fraternal Committee of the Insurance Commissioners’ Convention and the officers of fraternal societies for the purpose of formulating a uniform fraternal society law. The first of these conferences was held in Chicago and the second in New York. At the first conference a tentative bill was drafted. This bill was the outcome of an exhaustive discussion between the Insurance Commissioners and the society representatives. It was not entirely satisfactory to all concerned and after it was printed and circulated a final conference was had on May 15 in New York for the purpose of overcoming the objections raised and of moulding the bill into more satisfactory shape to all those interested.

"The Insurantee Commissioners' Fraternal Committee takes the posi-

tion that all fraternal societies should be placed upon a safe and solvent basis, and that the societies should be compelled to take such steps in regard to rates of assessments as would place them upon this footing, and that this result should follow by mandatory legislation governing all societies alike. The societies' representatives were informed that this was the purpose of the Insurance Commissioners, and that unless the societies would agree legislation in the nature of a force bill would be pressed by the Insurance Commissioners.

"The outcome of the New York conference was a compromise tendered by some of the representatives of the fraternal societies, which in brief provided that those societies at present not having adequate rates of contribution might be allowed within a reasonable time to progress to a condition of solvency. This compromise is incorporated in Section 23a of the revised tentative bill, which will be before this Congress for discussion and action.

“Your Executive Committee stood firmly for the principles of the National Fraternal Congress, as heretofore enunciated and informed the conference that they had no authority to bind the societies of the Congress. They decided however, to report upon the compromise of the bill to this Congress and are agreed that the revised tentative bill, under the circumstances, is the best that can be done.

"At the conference the representatives of those fraternal societies

which do not measure up to the standard of solvency all proclaimed their desire to reach that standard, but wished to be given reasonable time to reach that goal without being compelled immediately to do so. On the outcome in the various Legislatures of the enactment of this revised tentative bill the action of this Congress with reference to it will have great weight and influence.

"Should the revised tentative bill become the law generally in our States our National Fraternal Congress may then include after a few years all the reputable fraternal societies of the land."

Report on Statistics.

The report of the Committee on Statistics and Good of the Orders was read by Chairman D. P. Markey, and announced a death rate among the forty-three societies reporting for 1909 of 9.81 to the thousand, as against 9.26 for the fifty-five societies reporting in 1908. In the report on mortality by ages the figures of forty-three societies were given, including two of the largest, not now members of this Fraternal Congress. By the inclusion of these the expected deaths (by the Congress table) were shown to have been 36,120, while the actual deaths were 33,324, a ratio of less than 92 per cent.

The inclusion of the figures of these two societies renders it impossible to determine from the report the ratio of

MASS. LIFE REPORT.

(Continued from Page 1.)

peacefully and successfully, having to a great extent, if not fully, won back the confidence and respect of the public. All companies are issuing better contracts than before, for most of the objectionable frills have been eliminated, leaving plain, straightforward agreements for insurance. No longer can an appeal be made to the gambling instinct of humanity by offering deferred dividend policies, presenting estimates of gains twice as large as will ever be realized. The agent must be content with setting forth what the policy is and leave out the extravagant estimates. These better contracts, with the improvement in the financial condition of the companies, the savings from economies, the wiser administration of their affairs are of incalculable public value, for they promote confidence, curb the speculative tendency, lessen litigation and lift the whole business of life insurance up to a higher plane, where it can, without apology or blush, take its place among the other great business enterprises of the country which are improving the social condition of the people and aiding in the advance of civilization. It is the sunshine and calm following the tempest and devastation, the debris of which has been cleared away.

"The question naturally arises whether the tempest was worth the cost and was a real blessing. There can be no doubt as to what the answer of the average man would be, but at the same time others will argue that it was a great wrong to tear up business to its foundations, with the consequent losses to the companies and the loss of insurance to many of the disturbed policy holders who lapsed their policies. The view of the average man is more apt to be right touching questions which have a moral aspect, and the judgment that will be handed down to the future is that, notwithstanding the stress, the good results more than compensate for the loss.

Present Situation Better.

"But whatever the view of the past may be, there are few if any who would care to go back to the old conditions unless it be those who profited by the extravagances. The higher plane of transacting business which has been reached contributes to the peace of mind and physical well being of the officials, as well as to the gain of the insured, and, while the officials still find it necessary to be up

and doing in order to keep their respective companies in a healthful, growing condition, their work is not carried on in the dark, as some of it, by some officials, used to be in the old days. Important questions are considered in the open, in their broader aspects, and with wider knowledge of the surrounding facts and conditions.

As to Future Danger.

"There is little danger that this present satisfactory condition with respect to the financial management of the life insurance business will be impaired so long as there is wide-awake and thorough supervision, and the laws require the publicity which is now given through examinations and the annual reports. The danger, if any, lies in another direction. It is in the matter of contracts. Already there are evidences that some of the companies would like to depart from the plain policies now generally being issued and adopt more complicated forms, which will afford talking points for agents, who will use a "frill" for selling a policy which the "prospect" would not take, were the contract presented as straight insurance. It is in these "frills" that a danger lies, for they afford great opportunities for misrepresentation, just as the old deferred dividend trimming on the policy gave a chance for the agent to fool the public on the real substance of his contract. Already has information come to this department that there have been attempts to sell life insurance policies having a permanent disability appendix by representations that the company pays the premiums when the insured is sick, a very easy representation to make on that kind of a contract. It would seem to be essential, therefore, to guard with great jealousy the admission into contracts of agreements which are capable of being distorted so as to make the ap-

plicant believe that he is to receive a great benefit for practically nothing, or will receive under general conditions what he will be entitled to only in special cases.

Another Notable Departure.

"There is a tendency growing stronger each year to divide applicants for life insurance into classes of varying hazards, according to occupation, family history, personal habits, physical features, such as height and belt measurement, place of residence and the like. Though the applicant may personally appear to be normal in all respects his occupation may be such that a higher rate is demanded. His occupation may be satisfactory and his physical conditions excellent, but his family history be bad, and this will call for an extra premium. His own case may show symptoms which are to the physician signals for caution, and this sub-standard makes a demand for extra cost.

"Thus more and more it is being left to the medical staff of a company to determine what an applicant's premium shall be, rather than deciding simply whether the applicant shall be accepted as at least a good average risk or be rejected. This requires the very highest grade of professional skill and judgment as well as unimpeachable integrity."

BOSTON, Aug. 24.—The destructive fire which gutted the brick and stone building of Crimmins & Pierce, wool dealers, on Congress street, on Wednesday of last week, was the fourth of a series which within the time of eight days had caused losses aggregating considerably over \$1,000,000 in that city. The insurance on the building totals \$87,500 and on rents \$16,000; the loss on the building is put at about \$50,000. The insurance on the wool stock amounts to \$562,500, and a damage of \$350,000 is reported, although this may be offset more or less by the handling of the stock by the Underwriters' Salvage Company. For a time it seemed as if the wool district was in peril, but the salt water high pressure system was used for the first time since its installation eighteen years ago, and rendered splendid service in confining the fire to the building of its origin.

On Monday Mayor Fitzgerald sent a communication to the City Council relative to rebuilding the Fire Department repair shop and replacing the apparatus destroyed in the lumber district fire. He also asked the consideration of the Council for an extension of the high pressure water service system and the auxiliary fire alarm system, recommended by him week before last. The Mayor also inclosed suggestions from Mr. Everett, Building Commissioner, for improvements in the building laws to the end of bettering the city's protection against fire.

Massachusetts Mutual Agents.

The Agents' Association of the Massachusetts Mutual Life gathered at the home office in Springfield last Friday morning for its nineteenth annual meeting. President F. W. Rogers, of the association, was in the

chair, and President William W. McClench, of the company, welcomed the agents. The morning session was devoted to the reading and discussion of a variety of papers relating to the business. In the afternoon a meeting of general agents and managers was held, and there was an informal reception at President McClench's house in the evening. Another meeting of the association took place on Saturday morning, at which Osear B. Ireland, Second Vice-President and Actuary of the company, addressed the meeting on the relationship of the actuarial department to that of the field force. It was voted to hold the 1911 convention of the association again in Springfield. These officers of the association were elected for the ensuing year: President, Charles B. Richardson, of Richmond, Va.; Vice-Presidents, A. W. Bray, of Newark, N. J., and John J. Ahearn, of Minneapolis; Secretary, J. Putnam Stevens, of Portland, Me. Executive Committee—E. L. Sutton, Springfield; Miss Georgia Emery, Detroit, Mich.; John H. Smith, Nashville, Tenn.; E. B. Hamlin, Wilkesbarre, Pa.; John L. McFecley, Pittsburg, Pa. In the afternoon the convention came to a close with an outing at Riverside Grove on the Connecticut, including a clambake and field sports.

New England Brevities.

Following the recent amendment of the charter of the Fidelity and Deposit, of Baltimore, that company has been authorized by the Massachusetts Insurance Department to write accident and health, plate glass and burglary insurance in the Commonwealth, in addition to the fidelity and surety lines which it has been transacting there for some time past.

The Massachusetts Bonding and In-

surance Company has declared a semi-annual dividend of \$3 per share, payable on September 1.

An esteemed contemporary states that "Maine's fire losses for July were nearly \$3,000,000 in excess of the same month of 1909." Well, that's going some, even for Maine, but perhaps our E. C. put on a couple more O's.

The North British and Mercantile has appointed Frank W. Brodie its special agent for Connecticut.

Among Boston visitors last week were Vice-President Stevens and forty-odd members of the \$100,000 Club of the Illinois Life.

The Franklin S. Phelps & Co. Agency, of Boston, will move from 35 Waters street to 93 about September 1, when the Massachusetts F. & M. will take their present quarters.

The organization of the Empire Accident Corporation, of Lowell, Mass., intending to do business on the assessment plan, has been authorized by the Massachusetts Insurance Department. A supply of accidents seems assured, for among the incorporators announced we find Angelos J. Diamantopoulos and Demetrios A. Mitsakos, and hath not the poet sung "When Greek Meets Greek, Then Comes the Tug of War?"

EMIL SCHWAB.

W. J. LITTLEJOHN TO RETIRE.

W. J. Littlejohn, manager of the Western Department of the North British and Mercantile Insurance Company, will retire from the fire insurance business on June 30, 1911. The North British will about November 1, 1910, transfer its Western Department in New York. Until June 30, 1911, a permanent office will be maintained in Chicago under Mr. Littlejohn.

PITTSBURG MERGER, MAYBE.

The stockholders of the National Insurance Company of Pittsburg, at a special meeting on October 17, will vote on a proposition to merge and consolidate with the Ben Franklin Fire Insurance Company of Pittsburg "under and in pursuance of the terms and conditions of a memorandum of agreement executed and delivered by the Board of Directors of that company and the Directors of the Ben Franklin Fire Insurance Company of Pittsburg."

The National Insurance Company has \$500,000 capital, \$462,737 net surplus, \$799,839 reinsurance reserve and total assets of \$1,859,253. The Ben Franklin Insurance Company has \$200,000 capital, \$194,494 net surplus, \$417,265 reinsurance reserve and total assets of \$860,186.

The present metropolitan agents of the National are Whiton & Merges, and the metropolitan representatives of the Ben Franklin are Ward & Crawford.

HERE AND THERE.

Charles H. Eldredge, Chicago resident manager, and John H. Mullin, Georgia State agent of the United States Casualty, were in town on Tuesday.

* * *

Dr. Lee K. Frankel, of the Metropolitan Life sailed on Tuesday to attend the International Congress on Social Insurance at The Hague.

* * *

Vice-President Lewis E. Gordon, of the Hartford Life, who went to Rochester, Minn., about the middle of July, and was operated upon at the sanatorium of the Mayo Brothers, is progressing satisfactorily.

* * *

F. J. Haight, of Indianapolis, has resigned Secretary of the Indiana National Life to become General Manager of the Liberal Life.

**FRENCH FIRE CHIEF
PRAISES OUR FIREMEN.**

Raoul Frere, head of the Fire Department of the City of Paris, is in America on a trip of investigation in regard to our systems of fire fighting. He has spent several days within the last week observing the New York Fire Department, accompanied by Captain Howard Rusch, of Engine No. 18, quartered at 132 West Tenth street, and Fireman Charles Russell, who was detailed as interpreter.

M. Frere asserts that the New York firemen are far ahead of those of London and the larger Continental cities. He spent one night in the West Tenth Street engine house to answer alarms with the apparatus.

An amusing incident occurred when M. Frere slept with the firemen. The first call received came at about 3 o'clock in the morning. The chief had been tucked into Captain Rusch's private bed in a room opening in the main sleeping quarters. A large gong at the head of his bed rang for nearly a minute, while the firemen jumped into their clothes and slid down the pole. When Captain Rusch did not see his guest he rushed into his room and found him fast asleep, with the gong ringing loud enough to awaken the neighbors a block away. He aroused the sleeping chief, but it was too late. The company could not wait for him and had left. The visitor was chagrined and explained that in Paris he always awakened easily. He also explained that his "boudoir bell" was almost as large as our Liberty bell.

In contrasting the New York Fire Department with that of London he remarked that that of the latter city was a farce beside the New York system. He laughed when he referred to the way the London firemen "took their horses across the street to hitch up," and said that the way the New Yorkers got away was wonderful.

ACCIDENT POLICY FRILLS.

The executive committee of the International Association of Accident Underwriters met at the Hotel Ten Eyck in Albany last week. Chairman H. G. B. Alexander had extended invitations to the executives of every accident company doing business in this country. They were generally accepted and as a result there was the best attended session ever held by the committee every prominent company being represented. Superintendent Hotchkiss of the State Insurance Department was introduced and in acknowledging his reception announced that he would extend the time allowed for the submission of policy forms originally fixed for September 1 to October 1. Committees named for the purpose submitted reports proposing these subjects for discussion: "Elimination of 'frills' from accident insurance policies"; "Recommending an extension of the time for the submission of policy forms"; "Requirements of the New York and Massachusetts Insurance Departments under the standard provisions acts for accident and health insurance policies recently enacted in those two States." The "frills" referred to in the first of the foregoing propositions are the auxiliary clauses incorporated in policies for competition purposes, such as provisions for freezing, quarantine, sun stroke, burning and accumulative and children's features.

NEW GENERAL AGENCY.

A. H. Letts, Agency Manager at Owosso, Mich., for the Michigan State Life, has formed a partnership with O. B. Haller, district manager at Saginaw for the same company, and they will conduct a general agency for the Michigan State under the firm name of Letts & Haller, with headquarters in the Kirby Building at Saginaw. The agency will have charge of ten counties adjacent to Saginaw.

**FIDELITY & CASUALTY
COMPANY**

97 TO 103 CEDAR ST., NEW YORK CITY.

ASSETS - \$9,598,924.02
Cap. & Surplus \$3,564,229.90
LOSSES PAID \$31,636,503.21
to Jan. 1, 1910.

This Company grants Insurances as follows:

Bonds of Suretyship for Persons in Positions of Trust, Fidelity Bonds, Burglary, Plate Glass, Steam Boiler, Fly Wheel, Employers, Public, Teams, Workmen's Collective, Elevator and General Liability; Personal Accident, Health and Physicians' Liability

OFFICERS:

GEORGE F. SEWARD, President.

Robert J. Hillas, V.-P. & Sec'y. Henry Crossley, Ass't Sec'y.
Frank E. Law, 2d Ass't Sec'y. George W. Allen, 3d Ass't Sec'y.

Bardoe's Column.

ALBERT H. MOWBRAY has been appointed Instructor in Insurance at the University of California to serve for the ensuing year in the absence of Prof. Whitney, now in New York with the Legislative Investigating Committee. The work has been arranged so as not to interfere with Mr. Mowbray's practice as consulting actuary.

Announcement of the organization of the Occidental Fire Insurance Company of Albuquerque, N. M., is made by J. H. O'Reilly, Secretary and General Manager of the Occidental Life, of Albuquerque. Other incorporators, in addition to Mr. O'Reilly, are: George Roslington, A. B. McMillen, Solomon Luna and M. W. Flourney, all of Albuquerque. The company is to have a cash capital of \$200,000, with a surplus of equal amount, the shares, at a par value of \$100, to be sold at two for one.

The Executive Committee of the National Association of Local Fire Insurance Agents has voted to admit to the "co-operating lists" the Massachusetts Fire and Marine Insurance Company of Boston and the Scranton Fire Insurance Company of Scranton, Pa., these companies having subscribed to the territorial and expiration principles of the National Association.

The "Philadelphia, Pennsylvania and Delaware Insurance Directory" for 1910 has been issued by J. H. C. Whiting, of Philadelphia. It contains lists of companies, company officers, agents, brokers and solicitors, and abstracts of the Pennsylvania and Delaware insurance laws and tables of taxes paid in the two States, as well as a considerable volume of miscellane-

ous information of a valuable character.

"The Preferred Perambulator," 18th year, No. 109, Summer 1910, is the latest edition of what is described as an instructive carryall for agents of the Preferred Accident Insurance Company, published periodically by Wilfrid C. Potter, Secretary. The new issue contains poetry, with an accidental touch, as well as advice to agents and a list of the recent death losses paid by the Preferred.

Arthur F. Boles, of San Francisco, former manager of the Army and Navy Department of the Prudential Insurance Company for the Pacific Coast, has returned to the service of the Prudential. He has been appointed superintendent of agents and will be associated with O. O. Orr, manager of the company's ordinary department for Northern California.

Local agents at Salt Lake City are looking forward to a slump in insurance in mercantile stocks this Fall, as both wholesale and retail merchants have been buying sparingly. Utah farm and range products are beginning to move at good prices, however, and the merchants are beginning to feel a little more like reaching out than they did two months ago.

Of the \$10,000,000 property loss occasioned by fire at the Brussels exposition more than \$2,000,000 was covered at Lloyds, London, and the British fire offices have net losses of from \$15,000 to \$50,000, while Belgian and French companies have large lines.

The Maryland Casualty has deposited \$225,000 with the Dominion Government, and has received a license

to transact in Canada three additional lines—plate glass, burglary and fidelity and surety.

The twenty-third annual convention of the International Association of Accident Underwriters will be held at Mount Washington Hotel, Bretton Woods, N. H., from Sept. 20 to 23.

Secretary Gilbert Congdon, of the Empire State Surety Company, has returned from his Western trip. Mr. Congdon has been away five weeks, spending most of his time on the Pacific Coast.

E. H. Palmer, of Antigo, was elected President of the Wisconsin Association of Local Fire Insurance Agents at its annual meeting in Milwaukee. George Y. Wilkinson, of Milwaukee, was elected Secretary and Treasurer.

S. W. Cornwell, now with the Southeastern Underwriters' Association at Atlanta, becomes head of the engineering department of Fred S. James & Co. on September 1.

OBITUARY.

B. H. Abrams.

B. H. Abrams, State Agent of the Liverpool and London and Globe Insurance Company for Alabama, Georgia and Florida, died in Atlanta last Thursday. He was one of the most widely known of Southern field men, and had been connected with the company for several years.

William O'Connor.

William O'Connor, uncle of Bishop O'Connor, of Newark, died at Saratoga Springs, N. Y., last Saturday. He was a Civil War veteran and had been a resident of Newark for sixty years, where he had been in the contracting business. He was one of the organizers of the Hibernian Fire Insurance Company, which was liquidated in 1884.

FRATERNAL CONGRESS.

(Continued from Page 7.)

expected to actual deaths among the forty-three societies now members of the Congress; but as the two others are among the largest in the country, and have a death rate of but about 70 to 75 per cent of the tabular, it is a fair presumption that the actual mortality rate among the forty-three is well up to the table, if not slightly over it.

The report dealt especially with two matters as follows:

First, the increased strength financially of these associations compared with what it was ten years ago. In 1899 there were forty-seven societies in the Congress, with a benefit membership at the close of the year of 2,493,854. They had protection in force at that time amounting to \$4,021,869,200, and they had money in their benefit fund at the close of the year amounting to \$9,165,057. The forty-three societies represented in this Congress had a membership at the close of last year of 2,547,003, and protection in force amounting to \$3,094,116,819.22, and the balance in the benefit funds at the close of the year was \$6,295,778.82; in other words, while the present membership is larger and the protection less by over \$1,000,000, the funds in the treasury to safeguard this is six and a half times as great as it was ten years ago. This

clearly indicates the growing tendency on the part of these associations to get right financially; in other words, to make their contributions approximate the equivalent of their promised benefits, and while it is not contended that there is a sufficient amount in the treasury of all these societies to do this, they have greatly increased their ability to perform and carry out their contracts during this period of time.

On the other hand, we wish to call your attention to the matter of the expense of doing the business. Ten years ago the forty-seven societies represented in the Congress at that time spent for general expenses \$3,926,820, while last year the forty-three societies represented in this Congress spent \$5,148,798. Here, you will notice, is a large increase in the expense of management, and this can be traced back to what has been termed the growing tendency toward too much commercialism and too little fraternalism. The business has been placed too largely on a commercial basis, the influence of the local bodies as solicitors and agents in the recruiting of the business of the association has not maintained its former power, too little work is being done by the individual members, and as a result too much work is being done by the general management—that is, too much for the good and welfare of the system. The element of co-operation is lacking to-day in large measure as compared with ten years ago, even in those societies that are doing the most in the way of increasing membership. The situation, in the judgment of your committee, is the most serious one confronting us to-day, and has a natural relationship to the other serious conditions affecting us—namely, that of the unequal and unfair competition resulting from lack of substantial uniformity in the matter of contributions to the benefits promised.

The report also put emphasis upon the necessity as well as the justice of adequate rates.

Commissioner Folk Talks.

Commissioner Folk, of the Tennessee Insurance Department, who was chairman of the Committee on Fraternal Insurance of the National Convention of Insurance Commissioners, talked about some of the problems

confronting fraternal insurance. He said in part:

The most serious of these problems with which the fraternal system has to deal is that of having rates of contribution so adjusted that each member's payments will be in accordance with the benefits he is promised and the risk assumed for him by his society. Allied to that is the problem presented by the necessity for taking such forethought of the future that members living to an advanced age may suffer no injustice and no unwarranted disappointment. A third problem is involved in cases where level rates are collected and a member pays in more than the current cost during his younger years. It is essential to soundness that such excess be maintained as a trust fund for the purpose of meeting the deficiency between his payments and the current cost of his risk in his older years. Another problem, and one probably most difficult of solution, is that presented by societies having members who for years have been upon an inadequate contribution basis. It has been met by some societies when readjusting, by the creation of liens against the certificates. Another way of meeting it is by conversion of whole life inadequate certificates into term certificates for such length of time as the contribution rate will justify. I am not prepared to say what

method is best. What would be desirable for one society might not suit the condition of another. But on the wise and proper determination as to this and the other problems I have mentioned, and others of kindred nature, depends the future of our fraternal system.

No man or institution can continually borrow against the future without reaching some time a day of reckoning. Those of our societies which are pursuing this course of borrowing from the future should be made to see the necessity of ceasing such imposts before the hour comes when the reckoning will be disastrous.

If nothing should be done looking toward the advancement of the fraternal system to a more staple basis, the years might not be many before

some untoward circumstance might occur that would lash the public into a storm and bring it into the field "with its axe." But I can see no reason, with the sentiment now prevailing in this Congress and among fraternal leaders generally, why the Commissioners and the fraternalists cannot find a common ground on which they can stand. I think I state the position of the Commissioners fairly when I say they are willing to go far in making a compromise if something can be agreed upon which will represent a distinct and definite step toward the goal of ultimate soundness and scientific stability in fraternal insurance.

Much of the convention time was devoted to a discussion of a tentative uniform bill prepared by the Insurance Commissioners. The strongest fight was on Section 5, sub-section 2, which permits orders that accumulate the full whole life reserve to pay withdrawal values. This was attacked as "non-fraternal," and in the course of the discussion George D. Eldridge, who drafted the sub-section in the words in which it appears in the tentative bill, was invited to address the Congress on the matter of surrender equities. While the first attitude of the Congress toward the provision was distinctly adverse, the final vote retained the provision with scarcely a dissent.

The Congress struck out in two sections the right given the Insurance Commissioners to proceed for the closing of an order on the ground that in the opinion of the Commissioner the order "is not carrying out its contracts in good faith."

The Congress then adopted the bill, which includes a section providing for valuations.

Commissioner Hartigan's Address.

The other important address of the convention was delivered by Commissioner John A. Hartigan of the Minnesota Insurance Department, on the subject of expenses of fraternal beneficiary societies as follows:

It is a privilege to address you, representing, as you do, the fraternal beneficiary societies that stand for what is best in fraternal protection, for adequate rates, without which your system cannot endure, for honest treatment of members and for the elimination of fraudulent and deceptive schemes and practices. I speak not as an outsider, but as one who for nearly twenty-five years has been a member of these societies and has taken an active interest in them.

A fraternal beneficiary society has two distinct functions—the first, to unite fraternally its members to the end that each may be furnished, according to his needs, aid, consolation, assistance, sympathy and friendship. While the individual is aided in these ways, the community benefits from this cultivation of the altruistic spirit. These societies preach and practice the doctrine of the brotherhood of

man, and both individual and community are benefited.

The second function is to provide substantial benefits for the dependents of the member upon his death.

The first function may be exercised without the second, but in our American fraternal beneficiary societies the two are combined. With the first we have little to do. Each man can easily decide for himself whether he is receiving value for what he gives, either in direct aid or benefit to himself or through the satisfaction of doing good to others.

The second function, that of furnishing specific benefits to the dependents of members, is life insurance. The appeal of fraternal societies to the public has been that they provide this insurance at the lowest possible cost. Let us consider for a moment whether it is being so furnished, and, if not, in what items the expenses are excessive and consequently open to reduction.

The older secret societies limited their material aid to the needs of the dependent, and the contributions were in proportion to the means of the contributors. Contributions were voluntary. No fixed sums were ever promised or provided. The whole transaction was upon the sole basis of fraternity. He who had gave to him who had not. No salaries were paid, or, if paid at all, the amount was a negligible one. Each member took his turn in discharging the duties of the different offices and thus contributed his share to the general welfare. The general thought was "What can I give?" not "What can I get?"

Death benefits of considerable amount, paid from the graded contributions, call for entirely different financial and business methods, but the change need not extend further.

The fraternal societies were started in this country in the early 70's as a protest against the high cost of legal reserve insurance. The originators of these societies knew that by eliminating the cost of new business they could make a saving to their members; they also believed the mortality cost could be kept at a low figure on account of the constant and rapid growth of the societies.

I need not take any of your time to demolish the "new blood" theory. Every one is familiar at the present time with fixed mortality cost and realizes that this cost must be the same in every company or association, provided the risks have been selected with equal care. The money collected by an association of any kind doing a life insurance business is paid out for two purposes—death benefits and expenses. As the death benefits are fixed by the laws of mortality, the only place where economy can be practiced is in the matter of expenses. Many of the fraternalists have conducted their affairs in such a manner as to make substantial savings to their members. Others have shown a wasteful extravagance in their expenditures, the outlay on this account not being justified either by conditions or by results obtained. Total expense must increase with size, but the ratio of expense to income should steadily decrease. We find, however, that this ratio has increased and in a surprising degree.

A PENN MUTUAL PREMIUM, less a PENN MUTUAL DIVIDEND, purchasing a PENN MUTUAL POLICY, containing PENN MUTUAL VALUES, make an INSURANCE PROPOSITION which in the sum of ALL ITS BENEFITS is unsurpassed for net low cost and care of interests of all members.

Please mention this paper.

In the year 1893 thirty-nine fraternal organizations reported to the New York Insurance Department. Their receipts were \$22,778,763, and the disbursements for expenses were \$1,224,247, being 5.27 per cent of the receipts. In 1908, fifteen years later, seventy societies reporting to the same department had total receipts of \$73,438,636, and expenses of \$7,867,999, or 10 $\frac{2}{3}$ per cent of the receipts.

You will note that while the business was 3 $\frac{1}{4}$ times larger, the expenses were seven times greater. In other words, the expenses had increased twice as fast as the business.

In the latter year there was paid to organizers alone by these societies \$1,514,560, an amount considerably in

excess of the total expenses in 1893.

During the year 1909 the receipts of sixty-five fraternal organizations reporting to the Minnesota Insurance Department were \$72,442,736, and the disbursements for expenses \$8,651,016, practically 12 per cent. During the same year the expenses of thirty-three legal reserve life insurance companies reporting to the same department were 15.74 per cent of the total income.

The increase of expenses in fraternal societies is due principally to two causes. First, the adoption of the deputy system, and second, to the multiplication of salaried officers. In other words, to a commercializing of the fraternal system. The fraternal system was built up on the cornerstone of low expense. New members were brought in by those who were already members; salaried officers were few and the salaries were small; the incentive to work was the inspiration and call of true fraternity. With the multiplication of societies and the consequent struggle for new members came a gradual change in methods. Paid deputies were substituted for the voluntary workers; the number of salaried officers was increased, generally as the result of a need for more men to supervise a rapidly increasing business; in some few cases perhaps as a means to strengthen the hold of the officers on the control of the society, and in others in response to the unfraternal and selfish demand for a participation in the loaves and fishes. The deputy system is a serious handicap to the ultimate success of the fraternal society. It increases the cost of securing new business; it discourages and effectively stops the efforts of those who formerly secured new members without any financial reward; it results in the adoption of many unfit for admission from a physical, social and fraternal standpoint. The high pressure methods used at times by the deputies bring in a class who, unfit for membership, stay but a short time and produce nothing but a high lapse ratio.

I do not mean that deputies should not be employed for the institution of new lodges. This is generally necessary, but the lodge once instituted should grow through the efforts and work of its own members. There is no surer way of preventing growth in this, the natural and legitimate way, than by providing deputies. The waste of money and effort possible in the use of the deputy system is shown by the following figures showing the net gain made by several societies and the expense for organizers:

Society No. 1—Expense for organizers during 1909, \$67,500; net gain, 17 members; cost for each member gained, \$4,000.

Society No. 2—Expense for organizers, \$82,000; net gain, 3,000 members; cost for each member gained, \$27.

Society No. 3—Expense for organizers, \$50,000; net gain, 7,000 members; cost for each member gained, \$7.

Society No. 4—Expense for organizers, \$41,000; net gain, 16,500 members; cost for each member gained, \$2.50.

Society No. 5—Expense for or-

ganizers, \$4,000; net gain, 2,000 members; cost for each member gained, \$2.

Society No. 6—Expense for organizers, \$150; net gain, 6,000 members.

A study of these figures is illuminating and instructive. They are taken from the sworn reports of fraternal societies reporting to Minnesota.

The salaries paid to officers show as great divergence as do the figures quoted above. To illustrate:

Society A—Income, \$184,000; salaries, \$13,000; 7 $\frac{1}{2}$ per cent of income.

Society B—Income, \$500,000; salaries, \$16,000, 3 $\frac{1}{2}$ per cent of income.

Society C—Income, \$500,000; salaries, \$4,000, $\frac{3}{4}$ of 1 per cent of income.

Society D—Income, \$600,000; salaries, \$4,500, $\frac{3}{4}$ of 1 per cent of income.

Second Group.

Society E—Income, \$1,100,000; salaries, \$38,000; 3 $\frac{1}{2}$ per cent of income.

Society F—Income, \$1,500,000; salaries, \$8,000, $\frac{1}{2}$ of 1 per cent of income.

I shall not attempt to justify the bases I have adopted for comparisons, but I may say that I know of no better limit to expenses than that fixed by income. Even fraternal societies should cut their garment according to their cloth.

It must be evident from the above figures that growth is not dependent upon the amount paid to organizers, nor is efficiency of management to be measured by the number of officers and the amount paid in salaries. It might almost be argued that the greater the sum paid for deputy work the less the vitality shown by the society, and that officers' ability is in inverse ratio to their number and the sum paid them. The strength, vitality and efficiency of a fraternal society must be measured by other standards. Every dollar collected by these societies from their members must be put to its legitimate use. Upon this use rests the future of many dependents. Even the smallest extravagance may mean to some one the difference between independence and poverty.

No fraternal society will gain success unless its membership is cohesive and the forces that bind it together must be those of unselfishness. This unselfishness must permeate the order and must extend even to the governing body and to the highest officers. Unless a man has something to give to his order he does not belong in it, and this is true whether he be a humble member or an exalted officer.

Gentlemen, I am no prophet, but I see a time of trial coming for these associations; a time when every effort must be put forth to preserve them, a time for which preparation must be made; every weakness must be eliminated, there must be a return to the economical methods of the past by those who have deviated from them.

FRATERNAL CONGRESS.

(Continued from Page 14.)

The fraternal, with their millions of members and their billions of liabilities, are not the problem of any one man or of any one group of men. It is a problem that is national in its scope, but it is particularly your problem, representing, as you do, the governing bodies of these great societies. It is your duty to see that the members are informed of the true conditions and to work for such improvements, be they legislative or other-

wise, as will preserve, fortify and perpetuate this great institution.

The Congress elected the following officers: President, John J. Hynes, of Buffalo, of the Catholic Mutual Benefit Association; Vice-President, D. P. Markey, of Port Huron, Mich., of the Maccabees of the World, and Secretary, C. A. Gower, of Lansing, Mich.

Mackinac was designated as the place for the next annual meeting of the Congress.

66 Broadway NEW YORK

THE PROVIDENT

LIFE AND TRUST COMPANY
OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)

Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

Bob's Remarks.

ONE of the most important, as well as really hard working, committees of the New York Board of Fire Underwriters is that of the Fire Patrol. Few officials or agents who have not served on that committee realize or appreciate the vast amount of work, time and thought that is intimately and constantly associated with the duties of the Fire Patrol Committee. For a busy local underwriter to be a member of this division of the board's labors is not only a distinct tax upon his time and energies, but in a measure unfits him for that proper attention to his office matters which is justly due. Hence the resignation announced of Howard Hampton, metropolitan manager of the Hartford and one of the very active local underwriters, was in line with what was expected.

After September 9 the old fire badges will be out of business. The new ones, limited to about 1,000, will be issued to a few only. Years ago the old badges were obtainable at \$2.50 each, afterward \$5, then \$10, now \$50. Public adjusters may not have so easy a time getting clients while a fire is under way as heretofore.

In well known underwriting and political circles it is rather strongly hinted that the standardization of all kinds of insurance contracts is very much in the air.

Brokers report that many of the surplus line offices are "trimming" their lines, even on sprinkled risks in Manhattan and Brooklyn.

Returns from the Fire Insurance Salvage Corps of Brooklyn have been handed in to companies. The figures represent premiums written by companies and agencies for the six months ending June 30, 1910. Hereafter we append a comparative statement for the corresponding period of 1909:

	1909.	1910.
Local companies.	\$913,256	\$899,615
Foreign	732,872	720,424
Agency	944,408	1,045,674
Total	\$2,590,536	\$2,665,713

Difference in phraseology as to time limit on bills for unpaid premiums is the subject of no little comment by brokers. Some companies quote the entire wording of the handbook rule,

some an abbreviated copy of the same and others a short phrase like "Premium due 10th prox." It would seem that some universal sentence should be adopted by all offices.

September promises to be somewhat lively and interesting in the insurance world, if the special legislative committee gets down to active business in its investigations.

Brokers who control insurance on book and publishing concerns state that trade expects a fairly large volume of business for the holidays, and their clients are making preparations for a big season with naturally increased fire insurance.

Montague street, the chief insurance, banking and mortgage district in Brooklyn, reports very dull business for the last two months as to fire insurance interests. Agents state that renewals are hard to keep and new business is absolutely dead. One office reported a falling off of 20 per cent in premiums for the month of July as compared with the corresponding period last year.

The revival very soon of the old Greenwich Fire Insurance Company, with the veteran and popular Mason A. Stone as President, under the good offices of Jameson & Frelinghuysen, will be a welcome addition to the local and agency market. Its impaired capital, following stock market reductions in security values, has been fully made up.

INSURANCE BRADSTREET JUST ISSUED BY BEST.

The fifth annual edition of "Best's Life Insurance Reports," dealing with all legal reserve companies, transacting business in the United States and Canada, and fraternal societies and assessment associations operating in the United States, has just appeared from the press. The preface includes precise definitions of legal reserve, gross premium reserve, net level premium reserve, full preliminary term reserve, modified preliminary term reserve, and select and ultimate reserves. Special reserve systems of several States are also described, and forms of life insurance policies are outlined. Such matters as dividends, gain and loss exhibit, policy conditions and mortality and expense ratios are defined.

National Fire Hazard Tests in Chicago.

AN address delivered last Friday at the annual convention of the International Association of Fire Engineers at Syracuse, William H. Merrill discussed the object of tests at the Underwriters Laboratories in Chicago. The salient part of his address follows:

"Underwriters' Laboratories (Inc.), as many of you know, is an institution operating under the direction of the National Board of Fire Underwriters. Its principal offices and testing station are located in Chicago. It has branch offices for the conduct of its business in thirty-two other cities in the United States and Canada. The Chicago plant occupies a three-story and basement building of fireproof construction, containing something over 20,000 square feet of floor space, with a frontage of 116 feet. Yard space is provided for huts and large testing furnaces.

"The main building in Chicago is, perhaps, the best example in America of absolutely fireproof construction furnished with fireproof finish and equipment. It has been designed as a model to show a practical solution of many of the problems raised by the enormous and disproportionate loss by fire in the United States. Brick, terra cotta, concrete, stone, steel and

iron are exclusively used in the structural features. The window frames and sash are of metal, with wired glass; the doors are of metal; the desks and filing cases in the main office are of steel, and even some of the picture frames are of the same material. No wood or other combustible material is used in any portion of the finish or equipment. In addition, the plant is equipped with automatic sprinklers, and the lighting and heating hazards are safeguarded with every known precaution applicable to their installation in buildings of frame construction. From this description you will realize that in this case the underwriters have gone to the extreme in adopting in their own property all of the measures they are known

to recommend in the property of others. Forty-five persons are employed in the Chicago plant, which has a value of approximately \$100,000.

"The business of this institution is the examination and testing of appliances, devices, systems and materials having a bearing on the fire hazard. These include appliances designed to aid in extinguishing fires such as automatic sprinklers, pumps, hand fire appliances, hose, hydrants, nozzles, valves, etc.; materials and devices designed to retard the spread of fire, such as structural methods and materials, fire doors and shutters, fire windows, etc., and machines and fittings which may be instrumental in causing a fire, such as gas and oil appliances, electrical fittings,

chemicals and the various machines and appurtenances used in lighting and heating.

"Up to the present time the Laboratories have examined and issued reports on over 5,000 different subjects or appliances, each report representing from one to a dozen series of investigations and experiments.

"Summaries of the Laboratories' reports are promulgated on printed cards filed according to classifications, and cabinets containing these cards are maintained at the offices of the principal Boards of Underwriters

and Inspection Bureaus in the United States, at many of the general offices of insurance companies, by some insurance firms, certain municipal departments and at the local offices of the Laboratories in large cities. Much of the information is also freely distributed by means of lists of approved and permitted devices promulgated by the National Board of Fire Underwriters, and the results of the work in many classes of appliances are furnished directly to building owners, architects, users and all other persons interested, by means of the Laboratories labelling system, under which goods are inspected at factories by

UNDERWRITERS' LABORATORIES IN CHICAGO.

(Continued on Page 10.)

Employers' Liability Insurance in Sweden

By Miles M. Dawson

Copyright, 1910, by Miles M. Dawson.

STOCKHOLM, Aug. 9.—The insurance arrangements for providing for the liability of employers under the present Workmen's Compensation law of Sweden are in many regards peculiar. The law requires the payment of one crown (27 cents) a day to each employe who becomes totally and permanently disabled by accident in the course of his employment, the payment to continue from the fourteenth week throughout the lifetime of the injured person; likewise the payment of a reduced amount if the disablement is permanent but not total, or a lump sum if the impairment of the earning power is less than 15 per cent; and a pension for the widow during her widowhood and orphans during their minority in event of the death of an employe, caused by accident in the course of his employment. The employer is himself directly responsible and is not compelled to insure. Neither is he relieved from liability if he does insure, unless he insures with the State; otherwise, in case the company fails, he will be held.

There is a State institution, known as the Riksforsäkrings Anstalt, which has power to insure employers against their legal liability or to insure employers and employes so as to cover more than the legal liability, to determine the degree of impairment when the parties (not having insurance in the Anstalt) desire it or the courts request it, and to sell annuities to insurance companies or employers, covering indemnities for which they are liable. The Anstalt employs agents and pays commissions. It adjusts all claims against itself and many of the claims against employers or other insurance companies. Its adjustment is final except as to a legal question regarding the construction of the statute as, for instance, whether the employment is covered by the statute or whether the injury was received in the course of the employment within the meaning of the law.

In competition, the Anstalt has the following advantages: All of its expenses, of whatever character, are paid by the State out of funds other than the premiums. Insurance with it alone relieves from liability. Its adjustments are final and not subject to review; and, unless a private company is at least as liberal in every adjustment, unfavorable comparison is sure to be made, for the Anstalt's scale of allowances is in the hands of all its agents.

Its agents also are everywhere and every postmaster or other public officer who comes into contact with employers or employes, "roots" for it. Most of them, including local physicians—all of whose certificates as to disability are accepted by it and paid for by it—have a small financial interest in recommending it. The adjustments are usually made directly upon the physicians' certificates and without other investigation—a thing which is safe (if indeed it is safe) only because thirteen weeks of disablement must elapse before anything is payable and because even thereafter the indemnity is so small. This implicit confidence enhances the importance of local physicians and of government functionaries and makes for the popularity with them, of this method of insurance. Convenience also favors it, for all collections and payments are made through the postoffices, the postmaster receiving a small remuneration in both cases.

The Riksforsäkrings Anstalt has, accordingly, been successful. It now has in force over half of the total insurance and gains both in volume and in percentage every year. It has also paid its way, with a small but substantial margin, after putting up reserves estimated to be ample. Whether the reserves are, in fact, ample remains to be considered. For disabled persons, the value of the annuities is computed by the Actuaries' Table; no investigation as to their adequacy has yet been made. The experience in Norway, however, where the average longevity, as shown by population statistics, is not quite so great as in Sweden, indicates that their adequacy may be doubtful; and the same thing is indicated by the possibilities as to initial selection against the Anstalt, by employers and insurance companies which purchase annuities from it at the published rates, to cover the payments due from them, when the injuries are not such as to shorten life and do not purchase such annuities when the injured are likely to succumb soon.

The Anstalt pays 6 per cent commission to agents, which is, accordingly, also the rate of commission paid by stock and general mutual companies. "Inter-insurance" companies—i. e., associations of large employers—pay neither commissions nor collection fees. Any one of these methods of insurance or none of them may be used. Frequently, whether in the Anstalt or in a company, the insurance gives larger benefits than the law provides or pays for the earlier weeks (barring always, however, the

first three days) which the law does not require, in which case the extra premium may be paid by the employer or by the employees or both.

The total expenses, so far as they can be traced, of the State insurance are about 19 per cent of the net premiums, equivalent to about 16 per cent of the total cost, including expenses. This covers adjustments for other companies and for uninsured employers; but it does not cover all the incidental expenses of the government, because it is not possible to trace them all. The private companies use nearly 20 per cent of the premiums—which, though gross, must of course have been as low as the Anstalt's premiums, which are net—and the general mutual companies about as large a percentage, but computed on lower premiums. The "inter-insurance" associations of employers are conducted at a lower rate of expenses, estimated to average about 12 per cent.

In order to compete with the Riksförsäkrings Anstalt each of these institutions must furnish insurance at rates as low as (or lower than) those of the Anstalt though the latter does not charge anything for expenses. This looks to be impossible; and, indeed, it has been a steadily losing game, so far as volume of insurance is concerned, the Anstalt steadily gaining and the others steadily losing. Yet, so far these companies and associations have kept in the field. This is explained variously, according to the class of company.

Thus the largest stock company has done a steadily diminishing business, but at a profit. This has been due to its superior statistics, enabling it to underbid for the best risks, and also to its greater care in adjustment—which, however, has something of a boomerang effect. But it has no hope of maintaining its business permanently; and, indeed, by purchasing annuities from the Anstalt, is prepared to close its books any year.

It finds the Anstalt the "most unfair" or at least most

unpleasant competitor; but the "inter-insurance" mutual associations the most deadly, because of their lower expense and better prevention. Its management attributes the great reduction in expenses—from nearly 40 per cent to 20 per cent of the premiums—to the Anstalt and also believes the annuity purchase scheme a good one; it is also of the opinion that, if the State had kept out of insurance, but had provided for State adjustment of claims and for all companies purchasing annuities from the State, it would have been better. It is acknowledged, however, that compulsory "inter-insurance" in mutual associations of employers would have been best of all.

The general mutual companies have kept in the field, chiefly by maintaining lower reserves than either the stock companies or the Anstalt. They are finding it necessary to increase them. Their method is usually to insure at about Anstalt rates and return dividends representing the savings.

The "inter-insurance" mutual associations of employers have actually gained ground. This is attributed to "no commissions," "low expenses," "careful adjustments" and "more thorough measures of prevention," chiefly. In some cases, however, they are carrying no reserves or very small reserves, claiming that they are merely individual employers who "carry their own risks," though they do so mutually.

It is expected that the next move will be to make insurance compulsory, whether with free choice of companies, as at present, or in the Anstalt only, is not yet clear.

The third chapter in the series of articles on "Employers' Liability Insurance Abroad," by Miles M. Dawson, has been received from Copenhagen. It is entitled "Denmark's Peculiar Accident Insurance System," and will appear in THE CHRONICLE next week.

Illinois Commission at Work on Employers' Liability.

STAFF CORRESPONDENCE THE CHRONICLE.

CHICAGO, Aug. 31.—The Employers Liability Commission of Illinois held hearings in this city on Wednesday and Thursday of last week, at which a number of men presented their views on the proposed workmen's compensation plan which the commission has worked out. The Illinois Commission consists of six employers and six employees, and it has decided that no bill shall be reported to the Governor which has not received the approval of a majority of each side of the commission. The plan proposed as the basis of argument contemplates a workmen's compensation act applicable to all establishments where more than five employees are employed. The scale of compensation is somewhat similar to that provided in the Wainwright act in New York. It is provided that in case of injury to a workman, if the employer shall refuse to him the compensation provided in the act and compel him to sue, the employer shall lose his present defenses of fellow

servant and assumed risk and the contributory negligence rule shall be changed. If, however, the employee shall refuse compensation and shall sue, the employer retains all his present defenses under the common law and statutes.

There was a large attendance at the hearings and a considerable number took part in the discussions. As a rule, the employers and corporation attorneys who spoke were in favor of the principle of compensation, and appeared fairly satisfied with the tentative measure as the best that can be secured under the Constitution of Illinois. Several prominent leaders of organized labor in Chicago took a different view, however. For years the labor organizations have been seeking without success the abrogation of the fellow servant and assumed risk rules and the modification of the doctrine of contributory negligence. While the labor representatives do not express opposition to the principle of compensation, some of them are opposed to the tentative plan. They want the employers' liability changed first, and

will consider compensation afterward. It is questioned by some whether the labor leaders really represent the views of the body of organized laboring men of the city in this position. At hearings in other cities in the State labor representatives generally approved the tentative plan, and certain railroad employees who appeared at the Chicago hearing spoke favorably of it also. The labor members of the commission apparently are trying to learn the real sentiments of the labor organization men on this point and are likely to be guided by them. If they conclude that the leaders who spoke represent the true sentiments of their organizations they may refuse to approve the compensation plan and demand two bills, one depriving the employer of his main defenses and the other providing for compensation. As it does not appear likely that the employer members of the commission will agree to such a programme the result may be a disagreement and the presentation to the Governor of a report of the commission's work, but no recommendation for a bill. If, on the

other hand, the labor members conclude that the rank and file of organized labor throughout the State is favorable to the compensation plan, they probably will approve the tentative bill, with possibly some modifications, and a compensation measure be recommended to the Legislature by a majority of each side.

The one point in the proposed plan which probably called forth the most opposition, some of it from those who favor compensation, is the provision limiting the scope of the act to employers employing over five workmen. This would exclude from com-

pensation benefits a great body of workmen employed by small carpentry contractors, master painters and others, and this is regarded by many as unfair and unjustifiable. The commission, however, is not determined to have the limit of five fixed. It used this limit because it has been used in mining acts which have stood the tests of the courts. A question in the minds of the commission has been whether the naming of no limit would not create opposition to the bill from those who employ domestic servants, and from farmers, who generally employ fewer than five hands.

now dying off so fast as they did fifteen years ago, on account of improved tenement house conditions, improved milk and water supplies, and improved knowledge in the control of epidemics. These improvements have been brought about by a diversity of public health activities—much of them being wasted because of lack of organization, and all health activities handicapped by lack of scientific research and experiments and lack of proper statistical information.

"Finding that such practical results can be obtained even under existing conditions—results so vital to the people's welfare—the insurance companies are advocating that the Government take up the organizations and co-ordination of public health service. It has been possible for the Department of Agriculture, through efficient organization, to do so much for animals and plants, improving their health and giving them longer life, and the insurance companies are eager to have the human health activities of the country similarly organized.

"Practically all of the companies represented in the Association of Life Insurance Presidents are giving their moral support to the movement for the prolongation of human life. In addition to this, a great many of them are doing practical educative work. Measured by number of policies in force, the association companies cover 78 per cent of the field of American companies, having 21,700,000 policies out of a total of about 28,000,000. The association companies engaging in individual work along health betterment lines have 73 per cent of the total number of policies in force, or 20,500,000.

"There is a group of fire companies having policies aggregating 20,150,000 that make special efforts to stimulate their policyholders to activity in personal and public hygiene.

"There is another group of companies in the association which goes beyond the body of policyholders in its health promotion activities. They advise impaired applicants for insurance as to their physical condition and make suggestions to aid them. There are four companies in this group. Two of them, in the East, have a total of 86,000 policies. Another is a flourishing Middle West company that has about 150,000 policies. The fourth is a young and conservative Southern company with 7,200 policies.

"One of the Connecticut companies has published suggestions as to health reform in its magazine to agents. Two other companies, one of Massachusetts and the other of California, are considering active work in the future."

In New South Wales.

A WORKMEN'S Compensation bill was introduced in the Legislative Assembly in Sydney, New South Wales, on July 13, by the Premier, Mr. Wade. It was read and put on the calendar for second reading. As submitted to Parliament the bill is much on the lines of similar measures in other parts of the Empire. The following are some of its principal features: Workmen employed by the Crown are to be included, as well as those in private employ. An employer is held to be a person who habitually employs at least four persons in his trade or business, and the term employer includes firms, companies and corporations. The term workman is not to include any person whose employment is of a casual nature. The mining industry, being already provided for, is excluded from this bill.

When any industry has its own non-compulsory compensation or insurance scheme it may by consent be accepted in lieu of the provisions of the bill. Where death results from injury, the provision is to be three years' wages, with a minimum of £200 and a maximum of £400. Where total or partial incapacity results from injury the maximum is to be £100. Special provision is made for those under twenty-one and over sixty years of

age and for infirm workers.

When injury results from negligence of employer, the workman is to retain his rights at law independently of this legislation, but not in addition to it. Should he fail independently of the provisions of the proposed act he forfeits his right to subsequently claim under it. The court may, however, with the plaintiff's consent, assess the amount otherwise recoverable under the act and deduct therefrom the costs caused by the plaintiff bringing the action, instead of proceeding under the Workmen's Compensation act.

Employers are not to be liable for injuries which do not disable the workman from earning full wages for two weeks, or when an injury is directly attributable to serious or wilful misconduct of the workman. When litigation is necessary and the claim is for more than £30, proceedings shall be taken in the district court, but if for not more than £30 proceedings shall be taken before a stipendiary.

As there is every likelihood that the bill will have a rapid passage through its various stages in Parliament, accident underwriters are getting ready for the rush of business which is bound to come as a result of the increased liabilities to be placed on the shoulders of employers.

To Improve the National Health.

THE Committee of One Hundred on National Health in its August Bulletin, just issued, has a number of things to say in regard to the work of insurance companies, advocating Federal organization of human health activities, together with a statement of what life insurance companies themselves are doing to im-

prove health. What the Bulletin says follows:

"During the last fifteen years life insurance companies have not only been able to return money to their policyholders, but have been able to add to the amount of insurance given for the same premium. This is because people at younger ages are not

New Liability Laws in Force To-day.

THE new Employers' Liability and Workmen's Compensation laws of this State became effective to-day. In regard to the effect of these laws upon liability rates the "New York Times" published an editorial on Monday, in the course of which the opinion was expressed that "if the new laws effect the purpose of their framers the rates (for insurance) will eventually go lower than ever."

In regard to this point of the editorial Dr. R. S. Keelor, Vice-President of the Empire State Surety Company, said:

"I infer that this statement has reference to the assumed fact that workmen's compensation laws will make it unnecessary for employes to sue for damages under the liability law, and that as a matter of fact they will not sue under such law, and thus the cost of liability insurance will diminish. Every one connected with the business of liability insurance will be highly pleased if such result is attained, but I doubt whether any one so connected expects any such result. Suits for damages under the Employers' Liability law continue in England, notwithstanding the liberal provisions

of their Workmen's Compensation law, more than 3,000 liability suits having been heard by the English courts in one year. For reasons which have to do with social conditions such suits will continue here, notwithstanding the existence of workmen's compensation laws, but in larger proportion than in England, and under such circumstances rates for liability insurance cannot be reduced.

"Workmen will not, as a rule, favor the voluntary compensation plan, for the reason that it takes away the right to sue for damages under the employers' liability law. The workman wants to retain this right, because in a considerable number of cases he can collect larger damages under the voluntary compensation plan, and, on the other hand, the employer will not, as a rule favor the voluntary compensation plan because it calls for too much red tape to make it effective."

Frank E. Law, Assistant Secretary, and actuary of the Fidelity and Casualty Company, has this to say as to the high expense ratio of the liability companies, in the course of a letter to the editor of the "Times":

"Much criticism of the companies and of their high expense ratio is due

to a misapprehension. First of all it should be recognized that the business is a retail one. One policy is sold at a time, and then not at a company's own place of business, but at the place of business of another. Second, the companies have been under a heavy expense because they have to seek business. Employers did not seek them. Third, the companies must defend employers against suits to enforce claims not recognized by the law and suits to collect damages far in excess of what will be allowed by the courts. It is the fighting of what are held under the law as unjust claims that makes so much litigation and so much expense. The waste is due to the system instituted by the community, and not to the companies. It would be far better to cut off entirely from employes any rights of action under the common law and employers' liability statutes and give in lieu thereof adequate benefits under a workmen's compensation law. Such an arrangement would probably put a stop almost completely to litigation and the great waste consequent upon it. But there are constitutional difficulties that probably could not be overcome."

J. P. Morgan and the Equitable.

PRACTICALLY the entire life underwriting world is giving thought to the return of J. Pierpont Morgan to his banking house desk this month. The reason for this thought at the present time consists in what Mr. Morgan will choose to do in regard to the trusteeship of the controlling interest of 502 shares of the capital stock of the Equitable Life Assurance Society.

The old voting trust agreement, which was drawn for the period of five years, was dated June 15, 1905, and under its terms the trustees were the late Grover Cleveland, Morgan J. O'Brien and George Westinghouse. Efforts to forecast Mr. Morgan's decision have been fruitless in that the forecasters had their labor for their pains. Now, like the rest of life underwriters, they are restraining their interest until next month.

Under the old agreement the party of the first part, who then was Thomas F. Ryan, transferred to the trustees 502 shares of the capital for purpose of vesting in the trustees the right to vote thereon for the five-

year term and upon the conditions stated in the agreement. The trustees were exclusively authorized to exercise the voting power of the stock held under the agreement for the election of directors of the society. Of the entire directors of the society twenty-eight were policyholders selected by or on behalf of the policyholders and twenty-four were lawfully eligible persons selected by the trustees in their sole discretion. This old agreement was recommended by Messrs. O'Brien and Westinghouse to Mr. Morgan for continuance, and his reply was little more than an acknowledgment of the receipt of their recommendations and their expression of their willingness to serve again as trustees.

NEW ENGLAND BREVITIES.

Morris O'Keefe was arraigned in court in the Brighton district of Boston on Monday and held in \$15,000 on charges of having within a month set six fires in the Brighton section. One of these fires did \$25,000 damage on Thursday night to the stable and

contents belonging to A. J. Furbish. The accused, formerly a stableman in Mr. Furbish's employ, had been discharged by him.

* * *

The destruction by fire of James Walker & Co.'s saw and box factory at Basin Mills in Orono, Me., with over \$100,000 loss and \$90,000 insurance involved, after the plant had been run for sixty years, is an object lesson to the short sighted mortals who face claims of immunity or demands for lower rates because their particular property has escaped for so long.

* * *

The New England Insurance Exchange at its August meeting adopted the rules regarding wireless telegraph outfits recommended by the Executive Committee at the July meeting. Messrs. S. E. Barton, George Neiley and John J. Downey were appointed a committee to prepare a tribute to the late George P. Field.

* * *

At last Tuesday's meeting of the Boston Board of Fire Underwriters Harris H. Whitney was elected Vice-President to succeed the late Gustavus C. Holt.

Associated Fraternities at Atlantic City.

AT THE tenth annual meeting of the Associated Fraternities of America in Atlantic City last week President Donovan devoted much of his address to the bill drafted by the Fraternal Insurance Committee of Insurance Commissioners. Mr. Donovan said in part:

Some recent decisions of the courts of last resort in the States of New York, Iowa and Wisconsin occasioned the fraternal managers considerable alarm at the time they were rendered, but after a more careful examination of them, and consequent better knowledge of the facts, I think it is generally conceded, or should be, that these decisions were due largely to faulty wording in the constitution, laws and certificates of membership of the societies affected by the decisions.

When the older societies formulated their laws there were but few decisions of the higher courts construing the law applicable to fraternalists as distinguished from legal reserve corporations. Now, however, the courts of last resort in nearly all the States have passed upon such questions more than once, and I am decidedly of the opinion that our principal trouble, and our best remedy therefor, as well as for the correction of many other evils with which we are afflicted, lies within ourselves, and that in applying this remedy we will find in this, as in everything else in life, that an ounce of prevention is worth a pound of cure, and that a revision of our own faulty laws and certificate contracts, so as to bring them within the language of the more recent rulings and decisions of the courts as applied to such contracts, is better than to undertake to secure a reversal of their decisions after they are made; and in accordance with this belief I would recommend that this matter be fully discussed at this meeting and a committee appointed consisting of three members, learned in the law and having experience in fraternal litigation, whose duty it shall be to procure and inspect copies of the laws and certificate contracts of the various fraternal orders, and suggest such revision of them as will in their judgment tend to avoid trouble of a similar character in the future.

I have had both occasion and opportunity during the year to come in very close touch with this important commission, and am simply astounded at the stupendousness of the undertaking and the amount of work and effort that is being expended by the commission, both individually and collectively, to make the important work undertaken by them creditable alike to themselves, to the Associated Fraternities and the fraternal interests it is intended to benefit, and I hope that the encouragement necessary to the successful consummation of their great work will be given the commission, not only by the Associated Fraternities, but by the fraternal orders generally, irrespective of their affilia-

tions, and that the societies which have not yet submitted their experience and data for the use of the commission will do so at an early date, so that the final completion of the work may not be delayed.

The fact is generally recognized, I think, that there is no uniform system of record keeping and accounting employed by the fraternal beneficiary associations. Appreciating this fact, a committee on system and accounts was appointed at the Omaha convention last year, under a resolution offered by Major C. W. Hawes, the chief duty and province of which was to inquire and investigate the systems of record keeping and accounting in use by the various fraternal societies and life insurance companies, and report their findings and recommendations to the association at this meeting.

That this committee has been unable to accomplish the results desired and expected is a matter of keen regret, as it must be apparent to all who have given this subject any consideration that the present system of record keeping and accounting in use by the various fraternal societies is entirely inadequate to their needs. And as the changed and prospective changing conditions confronting the societies will soon, if it does not already, make scientific actuarial accounting not only a requirement but an actual necessity, and as the adoption of a correct uniform system of record keeping and accounting by the fraternal societies will unquestionably mean the adoption in time of like methods by the life insurance world generally, it behooves the fraternal societies, if they desire to be abreast of the times and be originators instead of imitators, to get busy. And with a view to the greater economy, efficiency and expediting of this important work, I would recommend that the committee appointed under Major Hawes' resolution of last year be reduced from seven to five members, to be selected from the present committee. As a correct uniform system of accounting, as well as a correct uniform report blank, must necessarily be a prime consideration in the determination of a correct uniform bill, and as both of these matters require the exercise of similar knowledge, experience and research, and the further fact that members of this committee have already had some valuable experiences in this line, it might be well to intrust both of these matters to this committee, clothing them with sufficient authority to enable them to confer and work in conjunction with the National Fraternal Congress and Insurance Commissioners' Committee on Uniform Blanks, to the end that the results of their early joint action may be available for consideration by the commissioners at their coming annual meeting.

Most of the sessions were taken up with a detailed examination and discussion of the Commissioners' bill. The special committee was continued

with power to represent the Associated Fraternities at the meeting of the Insurance Commissioners at Mobile, where it is hoped that this committee and the corresponding committee of the National Fraternal Congress will be able to agree with the sub-committee of the Insurance Commissioners on the few differences still existing and obtain a feasible bill.

Gifford Pinchot Blames Congress for the Extent of the Forest Fires.

G IFFORD PINCHOT, head of the National Conservation Association, and under President Roosevelt Chief Forester of the United States, censures Congress for the extent of the forest fires in the Northwest. He blames the members who consistently fought the forestry service appropriations intended to increase the number of rangers, one of whose duties is to look out for fires.

"I am proud," Mr. Pinchot says, "of the splendid work the men of the forest service have been doing against the Western forest fires. Many of them have given their lives to protect the homes of settlers and the forests on which the prosperity of the Western people depend. To my mind their conduct is beyond all praise.

"Forest fires are preventable. It is a good thing for us to remember at this time that nearly or quite all of the loss, suffering and death these fires have caused is wholly unnecessary. A fire in the forest is of the same

kind of a thing as a fire in the city. There is only one way to fight either. The fire department of every city is organized with the prime idea of getting to the fire when it is young. So with forest fires. The time to conquer them is before they grow strong. If a forest is equipped with roads, trails, telephone lines and a reasonable number of men for patrol, there is no more likelihood that great fires will be able to get started than there is that great conflagrations like the Chicago fire will get started in a city with a modern fire department. Under rare circumstances they may, but the chances are against it.

"The forest service has done wonders with its handful of devoted men. It has put out every year many thousands of small fires, any one of which, under favorable conditions, might have developed into a conflagration which 10,000 men could not stop. This year, because of the great drouth, the worst in much of the West for more than twenty years, there were too

many fires and too few rangers.

"The lesson from these forest fires is perfectly clear. When a city suffers from a great fire it does not retrench in its fire department, but strengthens it. That is what the nation must do on the national forests.

"The men in Congress, like Heyburn, Carter and Mondell, who have made light of the efforts of the Forest Service to prepare itself to prevent just such a calamity as this, have in effect been fighting on the side of the fires against the general welfare. If even a small fraction of the loss from the present fires had been expended in additional patrol and preventive equipment, some, or perhaps nearly all, of the loss could have been avoided.

"I believe our people will take this lesson to heart and insist that the settlers and their wives and their children, the lumber men and the miners and the \$2,000,000,000 worth of national property in the national forests shall be adequately protected."

Life Companies in New York Gain \$47,000,000.

A N INCOME of \$691,135,126 was the record of life insurance companies doing business in New York State during the last calendar year. This is shown in the annual report of the State Department of Insurance just issued. Of this sum \$380,868,125 was received by New York State companies, being an increase for all the companies was \$47,995,041. Of the disbursements for the year \$473,799,041, there was paid to policyholders \$344,006,147, and for management, including dividends to

stockholders \$129,792,893.

The assets of all the companies increased during the year \$263,281,470, of which \$130,118,909 were in New York State companies. The gross surplus and special funds amounted to \$173,606,532, the sum of \$75,812,975 being in New York companies. The liabilities, excluding gross surplus and special funds, were \$3,293,868,289, of which \$1,956,065,902 was in New York companies.

During 1909 New York companies issued 342,707 "ordinary" policies, in-

suring \$576,108,902, as against 305,693 policies in 1908, insuring \$504,862,179. Companies of other States issued 352,415 policies in 1909, insuring \$708,133,145, an increase in policies of 65,501 and in insurance of \$103,618,183. There were 10,157 less policies terminated in 1909 than in 1908 while \$42,123,389 less insurance was terminated.

The total number of "ordinary" policies in force on December 31, 1909, was 5,757,447, insuring \$11,110,457,172, an increase in policies over 1908 of 320,440 and in insurance \$556,499,315.

Most agents take a vacation during a part of the Summer months. The agents of the Philadelphia Life, having the advantage of a direct contract with the Company, can generally be placed in territory where they may enjoy a vacation and at the same time have the advantage of writing business and making money.

Write Perry to-day for contract.

The business in force in the State of New York and transacted therein during the last year by all life insurance companies of this and other States, including "industrial" business was: Policies in force 5,515,453, insuring \$2,431,017,825; policies issued 1,001,592, insuring \$372,020,470, an increase in insurance in force of \$157,329,306 over 1908 and an increase in insurance written and paid for of \$63,988,418.

The total receipts of the department for the fiscal year ending September 30, 1909, were \$427,074.40, and the total expenditures were \$226,044.34, an excess of receipts over expenditures of \$201,030.06.

The par value of the securities held on deposit by the department on December 31, 1909, belonging to the various insurance companies required by law to make such deposits, was \$25,942,510.

Speaking of the good showing in these figures, Superintendent of Insurance Hotchkiss said:

"The improvement in the business of life insurance reflected by the returns of the companies for the year 1909 is marked and indicates that this important branch of the insurance business is fast returning to more satisfactory conditions. While there was no abnormal increase in business written during the year, the increase in the business in force was most noticeable. The increase in dividend payments to policyholders during 1909, and in amounts apportioned for dividends on annual and deferred dividend policies, payable during the current year; the large decrease in lapsed policies and the lowering of the general expenses are among the features that go to prove that the year 1909 was not only a favorable one for the companies, but also for the insuring public."

GAVE SHARES TO RAWN FOR 10,000 CAR DOOR ORDER.

CHICAGO, Aug. 31.—The hearing on the charges against Frank B. Harri-man, Charles L. Ewing and John M. Taylor, former Illinois Central Railroad officials, accused of car repair frauds, was resumed on Monday before Judge Bruggemeyer, of the Municipal Court. Theophile Reuther, once a director of the Ostermann Manufacturing Company, one of the repair concerns, charged with drafting from the railroad, declared on the witness stand that he had been told that the late Ira G. Rawn held 8,000 shares of the Ostermann stock. Reuther testified that Ostermann said he gave Rawn the shares in consideration of an order for 10,000 car doors.

Rawn, who had been a high official

of the Illinois Central, was President of the Monon Railroad at the time he was found shot to death at his Summer home in Waukegan, Ill., on July 20. Rawn carried accident insurance policies of a face value of \$110,000, which, with accumulations, amounted to about \$135,000.

THE PITTSBURG MERGER.

The merger of the National of Pittsburgh and the Ben Franklin of Pittsburgh will take the form of the National-Ben Franklin Fire Insurance

Company, with \$1,000,000 capital, about \$1,000,000 surplus and more than \$3,000,000 assets.

The officers of the National-Ben Franklin have been agreed upon as follows: President, Samuel McKnight; Vice-Presidents, Charles F. Stifel and Joseph C. Porter; Chairman of the Board of Directors, John Thompson; Secretary, H. M. Schmitt. Mr. Schmitt has been the underwriter of the National, and he will have charge of the operations of the enlarged company.

Ohio German President Accused of Fraud.

TOLEDO, Ohio, Aug. 31.—Judge Michael Donnelly, former President of the Ohio German Fire Insurance Company, now under indictment here for transactions growing out of the failure of the company, was accused yesterday of having started the concern, then known as the Anchor Insurance Company, with practically no capital. The charge was made by E. R. Torgler and E. J. Marshal, trustees of the company, in a reply filed in the Henry County Common Pleas Court to the cross petition of D. D. Donovan, assignee of the Citizens' State Bank of Napoleon.

The reply of the trustees asserts that Donnelly and his associates had but \$38,000 of actual money invested as capital in the company when the concern received its charter from the State and began business.

The capital of the Anchor Insurance Company, which was started by Judge Donnelly and F. D. Prentice in 1902, and the name of which was subsequently changed to the Ohio German Fire Insurance Company, was supposed to be \$200,000, with a surplus of \$100,000. This money was all believed to have been paid in by the owners of the stock of the concern, but the trustees affirm that the State Insurance Department was misled by the officers of the company from the first day of the concern's existence.

In order to satisfy the Superintendent of Insurance that the company had the necessary money to begin business fictitious certificates of deposit, the reply alleges, were drawn on the Citizens' State Bank and were taken by Donnelly to the State official. These certificates totalled \$300,000, the amount needed under the law, and were exhibited by Donnelly as assets representing the capital and surplus of the new company seeking

the charter. Donnelly also exhibited certificates from J. D. Groll, cashier of the Citizens' State Bank, certifying that the full amount of \$300,000 was on deposit in the bank in Napoleon.

The trustees made the direct charge that the certificates were issued to enable the Anchor Insurance Company to make a showing, so that the Superintendent of Insurance would permit the concern to start in business.

The fight is being waged in court over the possession of \$102,050.13, the amount of bank balances alleged to be on the books of the bank and in favor of the Ohio German.

Attorney Alexander Smith, representing Assignee Donovan, who is a law partner of Donnelly, presented to the court his statement of the case.

"We will show the court," said Attorney Smith, "first that \$55,000 of this alleged balance was either fictitious credits or proceeds of unauthorized or illegal loans to Donnelly and that the insurance company parted with nothing, and can, therefore, recover nothing. Second, that \$25,000 more of the claim is fictitious and in the form of false credits obtained by the insurance company in 1905, 1906 and 1907. Third, that the insurance company must make good to the bank \$15,000 of North Baltimore and Columbus Grove bonds which were borrowed from the bank on November 4, 1908, when the company was on the verge of being closed up."

Attorney Smith then took up the question of the illegality of the loans made to Donnelly by the Citizens' State Bank and said that the mere fact that the jurist had given his note for \$105,000 to the bank showed that the transaction was fictitious. As to the agency balances amounting to \$55,000, and which had been transferred to the bank by Donnelly in payment for

a loan of equal amount, Attorney Smith said he would prove the insurance company and not the bank realized on them.

As to the Columbus Grove and North Baltimore bonds amounting to \$15,000, it would be shown, Attorney Smith said, that the bank owned these securities. Donnelly came into possession of them by first obtaining a loan on \$15,000 from the bank. Then he gave his note in payment and went out and bought the bonds, putting them up as collateral to secure the note. A short time after he was allowed by Groll to pull down this collateral and take it to Toledo, where he entered it as assets of the Ohio German and exhibited the bonds to the State Insurance examiners.

F. E. M'MULLEN GOES WITH PROVIDENT SAVINGS LIFE.

President Rittenhouse, of the Provident Savings Life announces the appointment of Frank E. McMullen as Second Vice-President and superintendent of agents of that society to take effect to-day. As President for one term of the National Association of Life Underwriters, and as an active member of the important working committees of that body for years, Mr. McMullen has earned a national reputation as a progressive life insurance man. He has for a long time been prominently identified with those whose successful efforts in fighting wrong practices, and in elevating and dignifying the work of field men have attracted wide attention.

Prior to 1902 he was a member of the field force of the Provident Savings. Since that time he has been manager for the Western District of New York for the Aetna Life.

FIRE HAZARD TESTS.

(Continued from Page 1.)

Laboratories engineers, and stamps or labels attached to such portion of the output as is found constructed in accordance with standard requirements.

"The results of extended tests and examinations of sixteen different brands of fire hose received from fire departments in the Far West, the Central West and the East, show important deficiencies in all, and clearly indicate that, almost without exception, these are of such inferior quality that they should not be accepted for use in a public fire department. While the brands investigated are by no means equally poor in quality, there is hardly a feature relating to the materials employed or the details of manufacture which does not merit criticism with more or less frequency, considering the tests as a whole.

"The tests and examinations of the couplings attached to the hose submitted show that this item is also commonly slighted, not only in regard to the quality of the castings and workmanship, but in the attachment of the couplings to the hose.

"The average weight of the couplings for 2½ inch hose was 5 pounds 6.73 ounces, including the expansion rings, only slightly less than the minimum weight of 5½ pounds specified. The maximum weight for any one set of couplings was 6 pounds 4.7 ounces; minimum, 4 pounds 11.39 ounces. In eight cases the couplings were under weight.

"The castings were not analyzed, but their color indicates that the percentage of copper employed is low in the majority of cases. In nearly all the tail pieces and expansion rings are somewhat shorter than specified in the standard, and in some the metal was not strong enough to resist the strains of expanding the binding rings without rupture. In several cases the corrugations for binding the hose contained sharp projections due to sand left in the moulds, and in one the corrugations were sharp enough to cut the hose fabric.

"It has been claimed that the hose furnished is as good as municipalities are willing to pay for and that the lower grades are sufficiently reliable for smaller cities where the service is not severe. A comparison between the prices paid and the quality of the hose furnished does not seem to bear out the first contention, for the best hose is frequently sold for the lowest prices, and hose of the poorest quality often sells at the highest prices. Then, again, hose of substantially the same

quality and bearing the same distinctive manufacturer's markings sells for prices differing by wider margins than can be accounted for by any difference in locality or legitimate cost of selling.

"It is unfortunately a fact that it has been most distinctively 'American' for municipalities to purchase materials on the representations of interested parties, and to often accept assurances as to their quality without proper investigation as to the facts in the case.

"The Underwriters' Laboratories may be said to be engaged in a somewhat uncommon business. We are endeavoring to tell other people things that are necessary and beneficial for them to know in connection with their business, where it comes in contact with our business. There have been a great many institutions and organizations and societies which have endeavored to do this in one field or another, and they have been successful or otherwise exactly in proportion to the real value to others of the advice they have assumed to give.

"Hundreds of millions of dollars are invested in the stock fire insurance companies doing business in the United States. The liabilities assumed by them under insurance contracts is equivalent to a large percentage of the aggregate property values of the country. This important direct financial interest in the efficiency of the Laboratories' work is a strong safeguard.

THE ROYAL TO ORGANIZE A CASUALTY COMPANY.

William and Pine Streets are quite busy talking about the announcement that the Royal Insurance Company of Liverpool will organize a casualty insurance company in New York to enter the various States. It will have \$500,000 capital and \$500,000 paid in surplus. Liability, personal accident, health, plate glass, burglary, boiler and all classes of business permitted by the statute will be included in the chartered privileges of the new institution, which will avail itself of the agency plants of the Royal and Queen Insurance Companies.

CHIEF CROKER INSPECTS MOTOR DRIVEN ENGINES.

Chief Croker, of the New York Fire Department, went to Syracuse last week during the session of the Fire Chiefs' Convention, principally for the opportunity to observe motor driven engines and combination wagons. The various makes of engines were lined up beside the canal, and gave exhibitions of the power and volume of water which gasoline engines were able to throw. After the exhibition he said:

"There can be no question but that the motor driven fire apparatus is the coming thing. An automobile engine or wagon can cover the ground much more rapidly than horse apparatus. I have heard some objections to the automobile on the ground that the cranking of the machine will delay a start from a fire house. There is nothing to that, however. A car can be started as quickly as a team can be hitched up. In spite of this, I believe the automobile is still in its infancy, and we must go slow in the matter of bringing it into general fire service."

QUEEN LETTER TO BROKERS

The following circular letter has been sent out to brokers generally by Secretary N. S. Bartow, of the Queen Insurance Company: "The Queen has decided to favorably consider an increase in limits on individual risks by about 50 per cent, such increase, however, not to apply to accommodation lines. We trust that you will be able to avail yourself of these increased facilities, and that you will submit for our consideration any good business which you may have to offer."

MEN OF ENERGY ARE OFFERED WORK OF MOMENT

In desirable localities representing a sixty-year old institution, with modern, liberal, law-conforming policies, and helpful Home office co-operation. Much good territory available. Many opportunities for advantageous positions. Inquire NOW.

LEADING FIRE COMPANY OF THE WORLD

What La Salle Has to Say About Insurance.

CHICAGO, Aug. 31.—Surpassing in interest everything else in the fire underwriting line in Chicago last week was the announcement of the closing of the Western Department of the North British and Mercantile about November 1. There had not been the least suspicion of such a change, and the announcement was a surprise to everybody. It is said that until Wednesday morning of last week only Manager W. J. Littlejohn, Assistant Manager George H. Bell and two clerks, who were getting out the announcements to be sent to agents, knew of the impending change.

Naturally the wisdom or unwisdom of the move comes in for more or less discussion on the street. The opinion is expressed by some that the company has made a mistake. The North British has been an important factor in the West. There are other good British companies, such as the London Assurance, Royal Exchange, Caledonian, Scottish Union and Norwich Union, which do not maintain Western departments, but neither have they the volume of business nor the influence in the West that the North British has. Why the company should take the course of companies doing only a limited Western business is what these people cannot quite understand.

On the other hand, it is pointed out that the Home of New York, which is the biggest factor in most of the Western States, did the same thing a number of years ago and has continued to grow in the West ever since. It, however, increased the powers and importance of every State agent, until each is almost equivalent to a general agent for a State. If that is the plan the North British purposes to follow its action will be understood

more readily.

In either event there is regret at the passing of the Western Department.

A well-known English company recently decided to divide the large field covered by one of its Western special agents, and, in order to obtain a field man for the territory cut off, inserted advertisements in a couple of Western newspapers. It expected many replies and it was not disappointed. Among those who aspired to become field men was a local agent representing one company as a side line. The company wrote him asking what special qualifications he had for field work, especially what experience he had had in adjusting losses. He replied that he had once adjusted a \$25 loss.

It is considered unfortunate that the meeting of the National Association of Local Agents at Chicago and that of the Western Union at Frontenac come at the same time. The result will be that both agents and managers will be disappointed in not seeing each other while the agents are in Chicago. The Union would have been inclined to change its date, but for the inconvenience that would have been caused the Eastern members. Some of the managers think the National Association made a mistake in choosing as its meeting time the usual date of the Union's annual meeting.

One fire insurance clerk in this city is rapidly concluding that he has run against a real sample of the strenuous life. This clerk asserts that he likes to work, and his record bears out this assertion, but there is a limit to his desires in this direction which he is approaching so rapidly he is likely to run past it without being able to stop.

The agent for whom he works is very energetic and his methods of work are not the kind laid down in books on system. What the clerk complains of is that the "boss" fools around the office most of the day, then goes out and solicits for a time, and about the closing hour comes in with a line of possibly several hundred thousand dollars that must be bound that night. The clerk gets hold of it about the time the offices are closing, and he has to get his binders from the agents at their homes. This keeps him telephoning to various parts of the city and suburbs until midnight or later at times. The clerk asserts that this running a night shift in an insurance office is getting monotonous.

The announcement a few days ago by Commissioner Barry, of Michigan, that the new Franklin Life, stock company, could not do business in his State under the license granted to the old Franklin Life, mutual, was, according to report, the forerunner of an examination if the company desires to continue in Michigan. It is understood that Mr. Barry intends to find out all the details of the process by which the company was changed from a mutual to a stock basis. This action was the cause of considerable comment. While several companies further West have done the same thing

at previous times, the notoriety given the Union Central's stock increase has tended to make these transactions receive more attention.

Just now there are several managers or general agents of small or young life companies in Chicago who are contemplating a change. Some of them have held their present positions only a few months, but in that time they have had the same experi-

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the CONNECTICUT MUTUAL.

Men of Character and Ability are invited to apply.

ence as their predecessors with small companies—viz., that it is almost impossible for such a company to get a foothold in Chicago. Even of the companies whose home offices are in Chicago only a few do any considerable business in the city, and those from the outside find it still harder. It has been the frequent experience for several years that young companies entering the city are made the victim of "rounders" and "advance men" until their general agents can stand the strain no longer, or they get loaded with "flyer" business that

eventually has caused them to look upon Chicago with disfavor.

* * *

Announcement from New York that the Royal is about to organize a casualty company excited lively interest among some of the casualty men in Chicago. It is, of course, conceded at once that any company the Royal stands behind is going to be solid and worthy of confidence. The question naturally arises, however, what is the Royal's reason for wanting a casualty company in this country and why have other English companies doing fire

business here shown similar desires. Whether these English companies foresee changes in the laws of the various States which will enable them to do business in all lines, as they do at home, and are preparing for such a change, or whether they see a way of utilizing their big city brokerage connections to get a good volume of casualty insurance at comparatively small expense, or whether they have other reasons, are questions on which casualty men find it interesting to speculate—that is, if one is so disposed.

LA SALLE.

Frank Lock Discusses the Expense Ratio.

FRANK LOCK, manager of the Atlas of London, sees little prospect of reducing materially the expense of fire underwriting at present. In the "Journal of Commerce" he is quoted as saying, among other things, the following:

"The business of fire insurance could be transacted to the best economic advantage, combined with efficient results, by concentration of management, coupled with broad and intelligent co-operation untrammelled in all phases of inspection, ratemaking and adjustment of losses, with possi-

bly some clearing house plan for the free exchange of business direct and by reinsurance. It may be granted that there is not too much capital in the business. Far from it, but the capital is too diffused, thus incurring an enormous economic waste in the multiplication of such items as officials, field men, travelling expenses, rentals and stationery.

"Beyond these again, due to the same and other causes, we find a great army of men doing the work of local agents far beyond the needs of the business, the overplus of whom simply embarrass and hamper the better class of agents who are entitled to be regarded as professional insurance men. The same thing holds good with regard to brokers attracted into the business by high rates of brokerage, as, for instance, in this city of New York, with 8,000 registered brokers. The business would be more efficiently handled to the greater satisfaction of all concerned (except of the eliminated) by one-eighth of that number, who would then be abundantly compensated on a much lower rate of brokerage than is now being paid.

"The life insurance business is mainly handled by a comparatively few large companies, and rightly so if the best results are to be obtained in economy with efficiency. In the countries of the world where the business of fire insurance is done at the lowest cost and at a steady profit, it has been in the hands of a comparatively few companies.

"Another serious item of expense is that of local boards, rating organizations and the various bureaus maintained by the insurance companies, which figure up some 2 per cent upon the premiums as a whole. While there may be numerous cases, and doubtless are, of extravagant administration, duplication of service, etc., yet the character of service rendered is so highly essential and on the whole

is so efficient that even if economized to the utmost there could not be much saved out of the 2 per cent which is so spent, while any crippling of efficiency would be a most serious injury to the interests of the public, which interests are now served by the rating and inspection and educational bureaus to an extent far beyond what is generally suspected or believed. All hope of growing away from calamitous conflagration as well as the eventual reduction of the premium cost hinges upon the methods applied through the various bureaus and associations, and the States which restrict the liberty of these bodies are unwittingly harming that which is of most benefit to their communities.

"To sum up, I see no prospect of a material reduction in the cost of doing business except by methods of concentration and co-operation which are not at all likely to be brought about. Reform waits upon change in public sentiment, which shall repose a certain amount of confidence in those who serve them through fire insurance companies, and this, I imagine, is likely to be quite a slow process to bring about."

DANIEL D. WHITNEY BETTER.

The serious illness of former Mayor Daniel D. Whitney, of Brooklyn, for many years President of the Hamilton Fire Insurance Company, caused much alarm to his many friends. It is reported that, although he is ninety-one years of age, he is much improved and said to be vigorous and active.

The third chapter in the series of articles on "Employers' Liability Insurance Abroad," by Miles M. Dawson, has been received from Copenhagen. It is entitled "Denmark's Peculiar Accident Insurance System," and will appear in THE CHRONICLE next week.

THE PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)

Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

In New England.

BOSTON, Aug. 31.—Here is the list of recommendations for the betterment of Boston's building laws to the end of diminishing the danger from fire, which Building Commissioner Everett, at the Mayor's request, has submitted to the Common Council. It is a fine programme if it can be carried out and enforced; but the fate of prior attempts in that direction, buffeted by political and particular interests, to some extent justified skepticism:

First—Extend the building limits to embrace areas fast filling up with inflammable structures.

Second—Provide for more frequent fire walls in second and third class buildings.

Third—Limit the areas which may be used for storage of lumber; surround such areas by fire walls, and, if possible, devise some means to prevent live embers flying in case of fire.

Fourth—More general requirement for sprinkler systems.

Fifth—Forbid the maintenance of all signs and other structures of inflammable materials within building limits.

Sixth—On or before 1915 remove all wooden buildings within the building limits.

A Long Fire Alarm Circuit.

How a cool head and prompt availability of the telephone headed off what would have been a disastrous stock barn fire is thus related by

"Telephone Topics":

"A part of the farming districts of Putney, Vt., and Westmoreland, N. H., are divided by the Connecticut River. One day recently a farmer's wife on the Putney side saw flames issuing from a neighbor's house in Westmoreland. Rushing to the telephone, she called the Putney operator, who in turn called the Bellows Falls exchange. The Bellows Falls operator called the Keene (N. H.) exchange, to which are connected the Westmoreland subscribers. The Keene operators immediately notified the Westmoreland subscribers, who hurried to the aid of their neighbor, who, by the way, had no telephone, arriving in time to save the large barn, full of hay, and several hundred head of live stock. The flames in the farmhouse were beyond control. The two farms mentioned are within a mile of each other, but it required a circuit of fifty miles of wire running through three exchanges to warn the nearest neighbor. It is said the burned out Westmoreland farmer now has high regard for the telephone."

Bad Losses from Trivial Causes.

The July bulletin of the Boston Manufacturers' Mutual Fire Association gives the following details of a fire which occurred on July 8 in the Hargraves cotton mill plant at Fall River, Mass., where a serious loss ensued from trivial beginnings:

"At 7:25 A. M. one of the em-

ployes discovered fire on the pendant electric light cord above one of the mule carriages in the mule room, located in the addition to the main mill. Upon an investigation it was found that a short circuit had occurred in the incandescent lamp socket and that the heated metal had started the fire on the cord. The fire dropped upon the mule carriage, badly burning the woodwork and melting the cylinders. The room was quickly filled with smoke, and, although five sprinklers opened promptly and worked effectively, they could not reach the fire inside the carriage, and two hose streams were brought into play and finally extinguished it. The water ran through all the floors and damaged machinery and stock. Loss, \$12,000 to \$15,000."

A sprinkler accident in the same plant on July 27 is thus described:

At 7 P. M. one sprinkler head opened in the mule room of No. 2 mill, the probable cause of which was the failure of the soldered joint. About seven minutes elapsed before the watchman could shut off the water, during which time considerable of the machinery was wet down; also the water leaked through to the floor below. Loss from \$1,200 to \$2,500."

The foregoing incidents reinforce the old lesson that inspection and vigilance save more than they cost.

The Goose Rock House and dependencies at Capt Porpoise, Me., was destroyed by fire on Sunday night; loss about \$30,000, with perhaps \$20,000 insurance. EMIL SCHWAB.

SUPT. HOTCHKISS, of the New York State Insurance Department, has issued a license to the Pacific Coast Casualty Company, of San Francisco, to transact general liability, surety, fidelity, court, contract, plate glass and burglary insurance business in the State of New York. The capital of the Pacific Coast is \$400,000, its surplus about \$300,000, its assets about \$1,000,000, and, under the California law, the liability of its stockholders is unlimited. It is also on the approved list of the United States Government. Whilden & Hancock, its Eastern managers, will represent the company in Northern New Jersey, as well as in the State of New York.

The Pacific Coast Casualty was admitted to membership in the excise bond pool on Tuesday. Most of the excise bonds written in this city come up for renewal as of to-day.

J. S. Clark has resigned as President of the Anchor Fire Insurance Company, of Des Moines, Ia., because of his advanced years. He is succeeded by L. E. Ellis, who has been the Secretary of the company for thirteen years. Vice-President G. A. Holland becomes the new Secretary, and S. G. Moore, the company adjuster, becomes Vice-President. With these changes the control of the company's stock passes to Messrs. Ellis and Holland.

Somewhat similar to the Christmas Eve surprise which President H. G. B. Alexander, of the Continental Casualty Company, gave to all the employees at the home office last year, when checks for one-tenth of their respective December salaries were distributed, a midsummer "Continental" lawn fete was given by him and his associates at the Colonial Club, Grand Boulevard, Chicago, last Saturday evening.

The shareholders of the Midland Insurance Company, of Birmingham, England, will hold a special meeting on September 8 to vote upon propositions to change the name to the Midland and Textile Insurance Company, to remove the head office to London, to increase the capital from £250,000 to £500,000, and to amend the charter of the company so that it may write employers' liability and workmen's compensation insurance.

The Independence Insurance Com-

pany, of Philadelphia, has obtained a Pennsylvania charter, providing for the transaction of a general fire, marine and inland insurance business, with a capital stock of \$200,000. The officers are: President, Henry I. Brown; Vice-President, Everett U. Crosby; Treasurer, Theodore E. Brown; Secretary, Edward B. Creighton.

The Vulcan Fire Insurance Company, of Oakland, Cal., has been incorporated, with a capital of \$500,000, and a surplus of equal amount. The work of disposing of the company's capital stock will be handled by P. S. McQueen and J. O. Galloway.

The Swiss National Insurance Company, of Bale, is making a deposit with the Connecticut State Insurance Department for the purpose of doing a reinsurance business in the United States under the management of E. G. Snow, Jr.

President Talbot, of the Philadelphia Casualty Company, announces the renewal of contracts with Hugo Nettle as manager of the plate glass department, and F. Seymour Giles as manager of the department for New York City.

The Balkan National Insurance Company of Sofia, Bulgaria, plans to enter the United States and to make a deposit of \$200,000 for the purpose of transacting a fire reinsurance business, with William C. Scheide & Co. as United States managers.

Samuel Milch, formerly uptown manager of the Penn Mutual, has been appointed Greater New York representative of the Pittsburg Life and Trust by President W. C. Baldwin.

Thirty-one negroes are the incorporators of the Union Guarantee and Insurance Company of Jackson, Miss., which has just been chartered under the laws of that State.

Announcement is made that the Citizens' Fire Insurance Company, of Charlestown, W. Va., contemplates an increase of capital stock from \$200,000 to \$400,000.

The old building of the Mercantile National Bank, corner of Broadway and Dey Street, is at last being torn down.

BUCHANAN A FIREMAN.

An old-timer of Lancaster, Pa., told the story of President James Buchanan as a fire fighter in the old Union Company in that city to a representative of the "United States Review" last week.

"Yes," said the old-timer, "President Buchanan was one of the active members of the Union for many years," and, looking up some data, he found the only President that Pennsylvania had ever turned out was a

member from 1813 to 1836, a period of twenty-three years. "In that time," said he, "he was often called out to fight fires in the then small town of Lancaster, a mile to the east of his home at Wheatland, and it is hardly to be doubted that he often used the same conveyance to bring him in when the alarm was given. When Buchanan got into politics and could no longer maintain active membership he was elected an honorary member, which he continued until his death."

Bob's Remarks.

THE remodelled and enlarged offices of the Lloyds Plate Glass Insurance Company in its building at No. 61 and 63 William Street, are rapidly approaching completion. When the alterations and full plans of the company are finished, the entire agency plant, together with the supply department, will occupy the southerly half of the first floor and the old office on the corner of Cedar street be rearranged to give more working room.

Annexes for large insurance institutions continue to be formed. Among the latest is that of the Sun Underwriters under the parental guidance of the Sun Fire Office. It is thought that the operations of the Sun Underwriters will be largely confined to business abroad rather than in this country.

A prominent broker stated to me that a large company, noted for its wonderful success within the last few years, with two risks submitted by him—one a dwelling and the other a hard special—declined the former, but entertained the latter. This particular company, by the way, has made money out of "high-priced goods."

From all indications the first public hearing by the investigating committee, whose offices are in the Liberty Tower Building, will be held on September 7 in City Hall. Edwin A. Merritt, Jr., is chairman, and M. Linn Bruce chief counsel.

Former Vice-President John W. Murray, of the German-American Insurance Company, used to have a trite expression regarding the difference between the two general departments of a company: "Agency dailies come to the office already laundered; with local business the laundry work has to be done at the counter."

In order to conduct ocean marine insurance the Royal Exchange has deposited \$200,000 additional with the New York Insurance Department.

Superintendent Potter, of the Illinois Insurance Department, in his report remarks that "it is seriously to be doubted whether the rate-making authority should be taken from the insurance companies and vested in the State, and experiments looking to this end have not, so far, been sufficiently successful to warrant further adoption

of this plan of State relation."

Pursuant to the above the published statement of Manager Lock would seem to be worthy of some weighty thought.

Perhaps the time is not far distant when the United States of America will follow in the footsteps of England in the matter of broadened charters, permitting the transaction of all kinds of insurance. This idea has been strongly presented to the writer within the last few days, in view of the remarkable and progressive additions to writing facilities which have been adopted recently by both American and English companies. Eventually there may be some form of Federal supervision.

Referring again to Mr. Lock's remarks, it appears that there should be a reduction in the number of brokers. In the light of previous efforts to that effect such action looks rather dangerous. When the old Compact of 1888 was founded the number of listed brokers was upward of 3,200. Now, with the strongest local organization ever formed and with the most rigid rules in force, the army of certified brokers foots up about 8,000.

In other words, every time the process of curtailment (as to brokerage membership) was tried it produce more than were ever dreamed of. Boiled down to practical politics, every reputable citizen or firm should be entitled to the opportunity of earning an honest living, whether it be insurance brokerage or any other respectable business and without undue and at times stupid restrictions.

Old Washington Market is passing through a genuine housecleaning. One of the chief features is that of demolishing and removing entirely the outside stands, thus materially improving the fire hazard.

Since the last published list of members in the Suburban Fire Insurance Exchange was issued, under date of March 21, 1910, the following have been added: Insurance Company State of Pennsylvania; Shawnee, of Topeka; Union, of Philadelphia; Cooper, of Dayton, Ohio; German-American, of Pittsburg; Standard, of Hartford, Conn.; English-American Underwriters' Agency, of Liverpool; Monongahela, of Pittsburg; State of Nebraska, of Omaha, and United States Underwriters, of New York.

LIVE ASSETS for LIVE AGENTS

Live, not Life Insurance, is the only necessity of life that has not increased in cost.

It is a great asset for a Live Agent to represent the largest health and accident insurance company in the world, especially at this time with compulsory workmen's insurance imminent and employer's liability insurance becoming costlier every day. Up-to-the-second policies. Most liberal contracts to agents.

CONTINENTAL CASUALTY CO.,

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company.

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.
 Large surrender values.
 Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in instalments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

Immediate Temporary Annuities.

Uses.

Computing Annual Term Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities. For these purposes the "select and ultimate" will be most useful.
Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.
Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
Warranted Commissions for New Business.
Surrender Values.
Dividends.

Denmark's Peculiar Accident Insurance System

By Miles M. Dawson

Copyright, 1910, by Miles M. Dawson.

OPENHAGEN, Aug. 11.—About the same time that Great Britain adopted the first workmen's compensation act taking effect in 1897, Denmark also enacted workmen's compensation legislation. These two acts are also noteworthy as the first laws to recognize the principle that the consequences of industrial accidents should fall upon the industry, but at the same time without requiring employers to insure. Previously the countries which had passed laws recognizing that principle had made insurance compulsory.

As in Great Britain, the Danish law makes the employer directly liable for all injuries and deaths due to accidents arising out of and in the course of the employment. Unlike the British law, however, the Danish act wholly absolves the employer from liability in case he insures in an "anerkent"—i. e., licensed Danish company. He may, if he prefers, insure in one which is not licensed; but in that case he remains liable if the company fails.

This does not apply to sailors or farmers, for both of whom insurance is compulsory, but with free choice of companies.

The workmen's compensation law does not cover the first thirteen weeks of disability, and no provision is made by law for covering it. Workmen are expected to provide against it voluntarily by means of sickness insurance, which had reached a great development before compensation legislation was enacted. Many workmen are so insured, and in a good many cases employers voluntarily contribute toward it. Yet many are without such protection. Originally the law provided for paying for these weeks in case the disability lasted longer, but that was found inconvenient and embarrassing and has been abandoned.

Insurance may be in stock companies or in mutual companies. Both are well patronized. The largest mutual has a very large proportion of the total business, but leading stock companies also do a large business. All the companies pay commissions, which range from 10 per cent to 15 per cent. The total expenses are from 25 per cent to 30 per cent in the best stock companies, and somewhat less in the mutuals, notwithstanding that it is said they expend more for prevention and are more successful in encouraging prevention.

This includes the special tax which the government

levies upon the companies to cover the expenses of adjustment of claims by the Arbeidsforsikringsraad, a public bureau which adjusts all claims. It is the peculiar feature of the Danish law that all accidents must be investigated and all claims adjusted by this Raad, which is composed of representatives of employers and employes, with attorneys and physicians. The *modus operandi* is as follows:

The employer is required to send the Raad notice of every accident, together with physician's certificate, if disability results. If covered by the law, the Raad, upon receiving the physician's final certificate—which is sent upon recovery, if the disability is temporary or upon becoming convinced that it is permanent—decides what sum is payable. There is no appeal except upon questions of construction of the law. The employer or the insurance company, if he is insured, must pay the amount so fixed.

All compensation, whether for disability or death, is payable in one sum. There is no requirement that an annuity or pension be paid, either to the workman, if disabled, or to the widow and orphans. In this Denmark differs, in whole or in part, from every other country which has so far enacted workmen's compensation legislation. This is said to be generally satisfactory. Yet it is acknowledged that when the law is revised it is probable that extensive impairment of earning power—perhaps when over 50 per cent—will be compensated by annuity payments and possibly that widows and orphans will be so compensated.

The lump sum system has had the great advantage that neither company managers nor state officers have had the serious problem to solve of providing for solvency, by maintaining a sufficient claim reserve to cover the present values of outstanding annuities. This is the more fortunate in that the "anerkendt," or licensed companies, are really not supervised at all, but merely required to make certain relatively meager financial reports each year.

At first the managers of companies were loud in their protests against the uniform State adjustment of claims, and undoubtedly they still feel that adjustment could be made at less expense and with a larger saving in the indemnities. They are said, however, to have concluded that the system has so far worked very well and has come to stay, and they now merely urge that they be represented in the Raad, but this is not likely to be granted.

Under this system of voluntary insurance, at least 90

per cent of the workmen, it is estimated, are insured. Thus a recent report of the Raad showed that of 2,468 accidents investigated there was insurance in licensed companies in 2,277 cases and in unlicensed companies in 25 cases, making 2,302 insured out of 2,468. Of the remaining 166 no less than 70 were insured by the State, being State employes or fishermen. A few of the largest employers carry their own risk, but most of the workmen who are not covered by insurance are working for men or firms who employ few workmen. The occasional unreliability of the uninsured employer makes it very probable that the law, when revised, will make insurance compulsory.

The Danish system of State adjustment of claims is perhaps more suitable for that snug little country than for any other. Distances are so short there that, at little expense, the physicians of the Raad or the Raad itself may require the claimant to appear in person. In a very

considerable percentage of the cases this is required.

There is little disposition to extend the compensation to cover the first thirteen weeks, but there is a strong sentiment in favor of making sickness insurance, covering also disability due to accident during the first thirteen weeks thereof, obligatory for every wage-earner. If such is attempted doubtless employers will be required to contribute a part of the premiums.

Though Denmark has long had a State life insurance institution, the "Statsanstalt," which is well known to American actuaries because of its survivorship annuitant mortality tables, it has not provided for accident insurance through a State institution, excepting in the cases of State employes and of fishermen. It is also not believed that there is a likelihood that private insurance companies will be displaced by a State insurance system or even that an accident insurance Statsanstalt will be set up to compete.

A Railroad View of Workmen's Compensation

JOSEPH N. REDFERN, Superintendent of the Relief Department of the Chicago, Burlington & Quincy Railroad, which has maintained for many years an insurance department for its employes, has written a statement of the railroad attitude in reference to workmen's compensation for injuries.

He states that after twenty-five years' experience in relief department work he believes payment of lump sums more advisable than payments in instalments.

He argues that railroad employes are of a higher grade of intelligence than the ordinary workingman, and that it is a reflection upon them to hold that they are not capable of handling their own funds and must be

treated as wards of the State.

Mr. Redfern holds that injuries received in the course of employment are not the cause of the greatest amount of hardship and suffering, which arise rather from disability and death received while not engaged at regular work.

The six railroads operating relief departments employ over 400,000 men and pay out annually \$4,000,000 in benefits, over half of which is on account of sickness or injuries received while off duty, and yet railroading is considered one of the most hazardous of occupations. He argues that any practical method prescribed by the State should cover not merely the hazards peculiar to the man's employment, but should furnish stated and

sufficient provisions for those members of society and their dependents who are physically unable to earn a livelihood from any cause not immoral. Mr. Redfern also makes a strong plea for uniformity in the pending workmen's compensation legislation.

The Burlington system operates in eleven States, he asserts, and should not be required to pay greater or less compensation to employes injured in Illinois than to one injured to the same extent and under like circumstances in any other State. To that end he urges the framing of a Federal bill by the commission recently appointed by President Taft, which should serve as a model for the various States, and bring uniformity.

Holiday Rain Insurance

JOHAN L. GRIFFITHS, American Consul General in London, has the following to say in regard to holiday rain insurance:

"Insurance has been made to cover almost every happening in England, such as the death of the sovereign, climatic conditions affecting the success of a pageant, a horse show, an agricultural fair, etc., and now a new form of insurance has been inaugurated which will enable persons whose holidays have been marred by rain to obtain, under certain conditions, monetary compensation.

"Underwriters are prepared to insure against one-tenth of an inch of rain falling on more than two days a week at any towns on the south and east coasts of England between Bournemouth and Scarborough, where the daily rainfall is either officially published or where satisfactory records can be obtained.

"Upon the payment of 7s. 6d. (\$1.82), for which a policy will be issued for seven days, compensation is

agreed to be paid at the rate of 10s. (\$2.43) a day on excess of two wet days; 10s. insures against an excess of four wet days in a fortnight; 12s. 6d. (\$3.04) insures against an excess of six wet days in three weeks, while 15s. (\$3.65) insures against an excess of eight wet days in a period of twenty-eight days. In each of these instances the compensation is 10s. (\$2.43) a day for the days in excess of the prescribed number of wet days. If the insured desires to double the amount in the way of premium he receives double the amount as compensation. If higher compensation is desired a proportionately higher premium will be charged. The underwriters will accept a certificate of the British Rainfall Organization as evidence of rainfall. The policies will provide that the greater portion of the one-tenth of an inch of rain, the quantity which by the terms of the policy will constitute a wet day of twenty-four hours, must fall during the daylight hours."

LAST CITY VETERAN OF CHICAGO FIRE DEAD.

CHICAGO, Sept. 7.—Captain Joseph O'Donohue, said to be the last of the firemen who fought the big fire of 1871 on the city payroll, died on Monday. He was probably the oldest member of the Chicago Fire Department, both in point of age and years of service. He joined the department in 1870 and was in active fire service for twenty-two years. The last eighteen he had spent as chief clerk of the Fire Marshal's office. Mr. O'Donohue was sixty-seven years old. He left a widow and nine children.

OKLAHOMA EXEMPTS INSURANCE COMPANIES.

Milas Lasater, Commissioner of the Oklahoma State Insurance Department, has sent to THE CHRONICLE a copy of the new Corporation License Tax law affecting foreign and domestic corporations. In Section 1 of the act insurance companies, railroad companies, banking or trust companies, building and loan associations and a few other classes of corporations are exempted from the provisions of this law.

NEW YORK INVESTIGATING COMMITTEE STARTS WORK

First Public Hearing in Aldermanic Chamber at City Hall Links Legislators With Wall Street Speculation by Way of Brokerage Firm Whose Special Partner Represented Metropolitan Street Railway at Albany—Louis Bedell Named

IN THE Aldermanic Chamber at City Hall yesterday noon the New York Legislative Investigating Committee began its public hearings. Just before the public inquiry began the committee held an executive session behind closed doors at their offices at 55 Liberty street. Despite the fact that all the committee-men were not disposed to talk after this preliminary meeting, it became known that partisan dissension had been narrowly averted over the manner in which the procedure had been outlined for the hearings. It was said that an hour and a half was employed by the chief counsel, M. Linn Bruce, and the chairman, Assemblyman Merritt, in satisfying all the other members of the committee as to the procedure for the hearings. The only admission obtained as to the developments of the executive session was a statement by one of those present that there had been a lot of "minute questioning, but nothing that could be interpreted as a disagreement."

Speculating Legislators.

At the public session Isidore J. Kresel assisted Judge Bruce in the examination of witnesses. The work of the day was directed to connecting the Albany activities of G. Tracy Rogers when he was President of the State Railway Association with influential members of the Legislature and in linking Mr. Rogers and several influential members of the State Legislature with the New York stock brokerage firm of Ellingwood & Cunningham, in which firm Mr. Rogers was a special partner. The examination of Mr. Rogers was suspended after the connection indicated had been established.

The relation existing between Mr. Rogers's influence upon Albany legislation and the speculative accounts of members of the Legislature with Mr. Rogers's stock brokerage firm was much elucidated through the testimony of a civil engineer, W. W. Cole, now practising his profession in Philadelphia, but during the time inquired into—that is, from 1900 to 1905—a traction man in Elmira and Treasurer of the Street Railway Association of New York.

Mr. Cole somewhat reluctantly revealed that when he became Treasurer of that association he was confronted with a deficit of \$10,000. This deficit, he testified to under a severe examination, resulted from political

contributions made by the association "to both parties," he understood.

The fourth and final witness of the day, Geo. Carpenter, established the most intimate relation between Mr. Rogers's activities in Albany and the speculative accounts of members of the Legislature, more especially the speculations of Louis Bedell, chairman of the Assembly's Committee on Railroads at that time. This witness at present is employed as a bookkeeper in a Nassau street brokerage firm. He was Ellingwood & Cunningham's bookkeeper for five or six years. His examination revealed the close search made by Assistant Counsel Kresel of the literally tons of account books of that defunct firm.

The young bookkeeper witness was reluctant at times to testify, but it appeared that this reluctance arose from his belief that for him to assist, no matter how unwillingly, to expose the secrets of a stock broker's special account would injure him in the estimation of his friends. But Mr. Kresel had a ready reference to every word and figure in the books upon which the witness was examined, and Mr. Bruce was persistent in making the witness testify to the meaning of the tangled web of accounts as it was slowly untangled bit by bit.

Carpenter was on the stand when adjournment was taken for the day, but he had already revealed that Louis Bedell's account with Ellingwood & Cunningham showed a debit in May, 1901, of \$7,775.98 and credits of \$2,375 deposited for Mr. Bedell's accounts by H. H. Vreeland, \$5,000 deposited to Mr. Bedell's account by H. A. Robinson, counsel for the Metropolitan Street Railway Company, and \$125 deposited to Mr. Bedell's account by G. Tracy Rogers.

The stock brokerage firm was also at that time carrying for Mr. Bedell 300 shares of the Electric Vehicle and Transportation Company. This is the Fifth avenue stage company, in the interest of which the Legislature passed a bill when Mr. Bedell was chairman of the Assembly Railway Committee.

Public Hearing Begins.

With the first witness at the public hearing the name of H. H. Vreeland, of the Metropolitan Street Railway Company, was brought into the inquiry. This witness, John Aum, Jr., a bookkeeper in the New Amsterdam National Bank, was asked whether he had made a search for the ledger showing the account of Mr. Vreeland

with the New Amsterdam Bank. He said he had been unable to find the ledger covering the period between January 1 and May 24, 1900.

"That," said Mr. Bruce, "is the very book we want. Go back and make another search."

G. Tracy Rogers, one time traction representative at Albany and a silent member of the brokerage firm of Ellingwood & Cunningham, then took the chair. He said that he lived in Binghamton and was an officer and director of various public service corporations in Binghamton, Elmira and elsewhere. He admitted that he had been a silent partner in Ellingwood & Cunningham. He was Vice-President of the Street Railway Association of the State of New York in 1894, and President in 1895. At that time he was also President of the Binghamton Railroad. In the year 1896-'97 he was again President of the railway association, he said.

Judge Bruce asked the witness to verify the names of his associates in the railway association, year by year, down to the end of his Presidency in 1903.

"The Street Railway Association was formed of the representatives of all the street railway companies of the State," said Mr. Rogers.

"Including New York and Brooklyn?" asked Judge Bruce.

"Yes."

"What were the purposes of the association?"

"For exchanging views, getting together, studying requirements and construction, improvement and betterment."

Judge Bruce elicited the admission

Assets	1,917,117.00
Deferred Dividend Reserve...	148,581.00
Contingency Reserve (Surplus)	655,149.17

Merger in Missouri

A DEAL has just been closed whereby the Guarantee Surety and Casualty Company, of Kansas City is absorbed by the Missouri Fidelity and Casualty Company, of Springfield, Mo. Among the officers, directors and stockholders are about eighty of the more prominent business men of Kansas City, who now become stockholders in the Missouri Fidelity and Casualty.

"All the arrangements are now completed to take over the Kansas City company," said S. E. Austin, general manager of the Springfield company. "By absorbing the Guarantee Surety and Casualty Company we gain eighty new stockholders, all substantial business and professional men of Kansas City; add several thousand dollars in cash to the assets of our company and lay a good foundation for business in Kansas City."

Mr. Austin and W. L. Taylor, Actuary of the Missouri Fidelity and Casualty, went to Kansas City two weeks ago to make a thorough investigation of the Guarantee Surety and to plan the preliminary arrangements for closing the deal.

"The greatest assets of the Missouri Fidelity and Casualty Company to-day is the foundation we have been building for the future," said Mr. Taylor. "There is a great deal of difference between promoting or selling stock and organizing the latter, including not only for the sale of stock, but the establishing of a corporation getting ready to do business."

"When the Springfield begins business it will, of course, be licensed in Missouri first, but we expect to apply

PREFERS CASUALTY FIELD TO COMMISSIONERSHIP.

Frank N. Julian has resigned as Alabama Secretary of State and ex-officio Insurance Commissioner in order to accept the position of general manager of the Alabama Fidelity and Casualty Company, which recently began operations in Montgomery. In an interview on the subject of his resignation, which will take effect on October 5, Mr. Julian remarked that "personal obligations force me to earn more money than the salary of the office, and a proposition was made that I could not afford to decline."

As a matter of fact, two of the appointive places under the Secretary of State receive a larger salary than the head of the department.

Mr. Julian will be succeeded by Cyrus B. Brown, who is at present chief clerk in the department, and was recently chosen Secretary of State in the State election. He has been appointed for the unexpired term of Mr. Julian by Gov. Comer,

at once for admittance to several other States where we are now locating our agencies. All of this work is being done while we are selling our stock.

"A branch office of the company will be opened in Kansas City, and the company will have the co-operation of all the Kansas City stockholders of the company."

Among the directors of the Kansas City company is James A. Reed, Democratic candidate for United States Senator.

Theodore Roosevelt at Kansas City Preaches Workmen's Compensation

IN HIS speech at Kansas City last Thursday Colonel Roosevelt had the following to say in regard to workmen's compensation:

"More than once we have had to investigate conditions in such businesses as those you have in this city. Always when you have done so the employer has explained to the wage-worker that if the Government was successful in its exercise of control it would result in the cutting down of wages. That isn't so. All we struggled to do was to secure better conditions of employment living among the men actually employed in industry.

"Take such questions as what is called the employers' liability. I do not like that expression, because I think the term should be the compensation of employes for injuries. I feel very strongly that in every industry where there is the slightest risk of life or limb, whether on railways or in any other industry, that in the event of loss of life or injury we should not leave it to lawsuits to determine what shall be done, and least

of all should we allow the whole weight of the burden to fall on the shoulders least able to bear it. If a man is killed in an industry, instead of leaving his widow and children to bear the whole burden, I would have it distributed over the whole industry by making the employer pay a certain amount of compensation.

"It is not fair that a man working on a railway who loses his arm should pay all the penalty by being crippled all of his life while the railway pays nothing. It is not fair that a girl working in a factory which renders her liable to suffer injury shall go on in life maimed and no one else bear the burden for her. The burden should be distributed when a working-man is injured or killed in his employment. There should be no question of responsibility. He should receive compensation for the injury he has suffered, and if he is killed his family should receive such compensation. It should be the duty of the Government to see that he is paid, too. He should not be left to bring a lawsuit.

"There are admirable lawyers, but

not many are found following the profession of 'ambulance chasers.' The lawyer who makes his living by hunting up accidents and by carrying on lawsuits which may be justifiable or unjustifiable is not as a rule one whose interests it is necessary to consider. We should have the compensation act so fixed that the wage-worker's child gets his share, and none of it should go to a man who gets him into the lawsuits in connection with it.

"I do not want to penalize the corporations by making it pay an excessive amount. I want to see that what is paid goes to the injured man and to the injured man's family. Therefore I want to eliminate the lawyer totally from the transaction.

"I am emphatically for progressive legislation as regards the control of the corporation and as regards the adjustment of our relations with the corporation. But, friends, do not forget that no legislation will ever avail unless we have the right type of men and women on whose behalf the legislation is invoked."

Ohio Incendiarism Less

JOHN W. ZUBER, Fire Marshal of the State of Ohio, has some things to say of interest to fire underwriters as follows:

"The first five months of the current year have developed only thirty-five fires in Ohio of undoubted incendiary origin. This average of seven a month, if kept up throughout the year will establish a new low record for this State in fires of this character. The low number is remarkable and fully as gratifying as it is remarkable.

"These figures would indicate for the year a total of only eighty-four incendiary fires, whereas the lowest previous record since the organization of the department was ninety-seven in the year 1905. It was in the early part of that year (1905) that the investigations into the operation of the "Williams County gang" began to bear fruit in the prosecution and conviction of the men who had terrorized that whole neighborhood and caused the destruction of millions of dollars worth of property.

"The reduction of the number of this class of fires from 292 in the first year of the department's operation to the present average of a hundred or less is certainly a remarkable showing. That it is very largely attributable to the activities of this office will scarcely be questioned.

"This reduced number of such fires of course does not by any means represent the number of fires investigated. Very many fires are reported as being incendiary which upon investigation are found to have been accidental or due to some entirely innocent cause. And many others are investigated where there is no suspicion whatever but which must be looked

into in order to determine the cause or origin if possible.

"It has frequently been stated and is capable of demonstration that nearly four-fifths of the fires which occur in this country are due to easily preventable causes. When one remembers that there occur between four and five thousand fires annually in Ohio and that each fire means an average loss of \$1,200, is it not a fearful indictment to say that four-fifths of this loss might easily have been prevented."

Cotton Bills at Lloyds

A GROUP of underwriters at Lloyds, London, have made arrangements with some of the English buyers of American cotton bills for insuring them against any losses they may suffer through the acceptance of spurious bills of lading. This insurance is to take the place of "bank guarantee," and it is believed that the protection thus given the purchaser of bills will meet the requirements of the English bankers.

The American surety companies expected to send agents to all cotton centres in the South for the purpose of supervising the acts of the railroad agents. Lloyds, London, will not do any such thing, and consequently its expenses will be materially lower than

those figured by our surety companies when they outlined their plan for guaranteeing cotton bills.

Following is a sample of the documents issued to firms which take out insurance with Lloyds, London:

LONDON, 1st Sept., 1910.
To Whom It May Concern:
Cotton Season 1910-1911.

Sir:—
This is to certify that the undersigned have effected insurance on cotton to cover any loss Messrs. may sustain through accepting or negotiating forged or fraudulently incorrect bills of lading.

Limit of Loss, One Shipment

£

We are, Sir,

Your Obedient Servant,

Insurance Brokers.

The negotiations between American shippers and the surety companies are still pending.

E. E. CLAPP & COMPANY TAKE NEW BUILDING.

The well known disability agency, E. E. Clapp & Co., which for many years has occupied the buildings at 66 and 66½ Pine Street, where they are now located as managers of the Fidelity and Casualty Company's Accident and Health Department for New York, New Jersey, Massachusetts and Rhode Island, have leased the entire eight story building at 90 William Street. They are arranging to make extensive alterations to the building, remodelling the front, the ground floor and several other floors, and will occupy most of the building for their own use and that of their agents. The insurance district, as all know, has recently been moving up William street. This move of E. E. Clapp & Co. makes it pretty clear that Pine street as an insurance street has seen its busiest day.

E. E. Clapp & Co. have the largest accident and health business of any agency in the world; in fact, there are only four or five companies which have in the whole of America as much as E. E. Clapp & Co. have in their four-State agency. The figures for their business in New York State alone last year showed several hundred thousand dollars more than their increase last year was greater than the combined increases of their four nearest competitors, as shown by the State report.

The firm reports a very substantial further increase for the year so far, and this move into the heart of the new insurance district will still more largely increase its business among the brokers.

E. E. Clapp & Co. are also managers of the metropolitan district for the Burglary and Theft Department of the Fidelity and Casualty, having a volume of business in New York larger than their two nearest competitors, and increasing more last year than both of the latter combined.

No. 90 William street is also the home of THE CHRONICLE.

REPORTS PREJUDICE AGAINST US ABROAD.

William J. Joyce, President of the National Surety Company, who went to Europe several months ago, with a view of establishing branch offices for his company, came back with a very pessimistic view of conditions abroad, so far as they affect surety business.

"The prejudice entertained by foreigners against the insurance companies of America is simply amazing," said Mr. Joyce. "I found it so much so, in fact, that I had to give up my plan to establish insurance agencies on the other side. Of course, the foreign view on conditions here was engendered by the many official investigations which we have had into insurance affairs and the political capital which has been made on this side out of them."

WORKMEN'S COMPENSATION RISKS UNDER NEW LAWS.

Vice-President R. S. Keelor of the Empire State Surety Company, has issued a circular letter to brokers in regard to employers' liability and workmen's compensation insurance, in which he says:

"A better opportunity to increase your income from the sale of liability insurance never existed than is presented right now. Then, too, you have the advantage of an entirely new line—workmen's compensation insurance. The Phillips Employers' Liability law increases the liability of employers anywhere from 100 to 300 per cent. This law was enacted in response to the demands of labor unions, and these same unions will see to it that their members get all they are entitled to when accidents happen. The employer must pay for all of this unless he is insured, and necessarily the insurance will cost him more than liability insurance has heretofore cost.

"But the man who owns property or employs labor has been made subject to an entirely new liability under the Wainwright Compulsory Compensation law, so that one who needs

liability insurance also needs compensation insurance. This new law is so worded that the courts may decide that many accidents not now considered to come within its provisions must be paid for. For instance, the use of electricity for any purpose, even for ringing door bells, or the use or the keeping of anything of an explosive nature may make an employer liable for indemnity not to exceed 1,200 days' wages for death of an employe or not to exceed eight years' half wages for a disabling injury."

PENNSYLVANIA HAS A WOMAN UNDERWRITER.

Mrs. Annie M. McConkey, widow of Edwin K. McConkey, late Secretary-Treasurer of the Farmers' Insurance Company of York, Pa., has been elected his successor. Mrs. McConkey is the only woman who is now holding such a prominent office. She has the benefit of her father's and husband's knowledge of fire insurance.

In New England.

BOSTON, Sept. 7.—The Commission on Compensation for Industrial Accidents, which was created by the last Massachusetts Legislature, is now holding weekly sessions in furtherance of the investigations that devolve upon it and which may result in the revision of the present Massachusetts law governing the amount of indemnity that employers must pay to the employed who are injured in the performance of their work. The far-reaching Wainwright law, recently enacted in New York State, and relating to the same conditions, invests the deliberations of the Massachusetts commission with particular interest. The commission has begun an extended inquiry into the operation of the existing laws relating to its subject matter in the United States and Europe, as a basis for recommendations to be submitted to the Legislature of 1911. The headquarters of the commission is in room 227 in the State House at Boston. The first public hearing is set for September 29 at 7:30 P. M., and is to be followed by other hearings at later dates in Boston, Fall River, Lowell, New Bedford, Pittsfield, Springfield, Worcester, and possibly other cities, if sufficient interest is shown. The commission is composed of James A. Lowell, chairman; Amos T. Saunders, Magnus W. Alexander, Henry Howard and Joseph Parks. Carroll W. Doten, clerk of the commission, has gathered an abundance of particulars to present at the public hearings.

New Fire Apparatus Needed.

Acting Fire Commissioner Carroll, of Boston, wrote to the Mayor on Saturday that the \$110,500 worth of fire apparatus—mainly to replace that destroyed in the lumber wharf fire of August 9—is immediately needed by the department, as follows:

Two first size engines and three second size engines, \$27,500; one water tower, quick raising, \$6,500; two auto chemicals, \$11,000; three

straight horse-drawn chemical engines, \$6,000; three aerial trucks, \$16,500; 10,000 feet of hose, \$9,000; 1,000 feet of chemical hose, \$500; one combination ladder truck, \$2,500; harnesses, \$1,000; machinery, \$10,000; supplies, \$5,000; incidentals, \$10,000; one city truck, \$2,500; one power boat for marine district chief, \$2,500; total, \$110,500.

In answer to an inquiry from the the Finance Commission the Mayor has stated his reasons for thinking the Fire Department worked under difficulties on the night of the lumber fire, as follows: The fire started at an hour when many of the men were at supper, and the acting Fire Commissioner confirmed that view. The Mayor believes that the department should be increased to prepare for such emergencies by a sufficient number of men so that absence on account of vacations, illness or meal-time will not hamper its efficiency.

A Feeling Tribute.

The memorial prepared by a committee of the Boston Board of Fire Underwriters, Frederic C. Hinkley chairman, to the late George P. Field, for three terms President of the board, is a feeling and well-put tribute to the virtues of that excellent man. It tells of his unstinted devotion in promoting the interests of the board, of the leading position he held in fire insurance circles in Boston, of his kindness, helpfulness, sunny disposition and winning personality, and truly states that his life was an exemplification of the saying, "An honest man is the noblest work of God."

New England Casualty Company.

The examination of the New England Casualty Company, as of July 31, 1910, recently completed by the Massachusetts Insurance Department, makes a very satisfactory showing for that organization, the admitted assets being \$256,190, whereof \$200,000 figures as capital and \$37,719 as net surplus. On this basis a policyholders'

surplus of \$237,719 is shown, surely an ample margin of protection. The New England Casualty may be trusted to give a good account of itself under the energetic and efficient guidance of President Corwin McDowell.

New England Brevities.

Among recent visitors to Boston was Dr. Ernest Avellis, of the German Imperial Insurance Supervising Bureau in Berlin. Dr. Avellis is making a study of American methods of insurance supervision and company management, and found much to interest him here. Accomplished insurance-wise, Dr. Avellis is a man of liberal culture in other ways and a prepossessing example of a high-class German gentleman.

* * *

The heat of the recent political campaign in New Hampshire may be gathered by the fact that one of the candidates practically charged his opponent with having connived at the setting of a brush fire to draw away the audience from the hall in which a "rally" in the interests of said candidate was held. EMIL SCHWAB.

THE NATIONAL SURETY PLANS TO ENTER CANADA.

The National Surety Company is preparing to enter the Dominion of Canada for fidelity and surety business. As soon as the necessary formalities can be complete and a suitable manager secured it is proposed to open a branch office, probably in Montreal.

INDUSTRIAL ACCIDENTS.

In a current number of the "Survey" appeared two articles on the general subject of workmen's compensation which show considerable research and are presented in an authoritative manner. The first is entitled "Work Accidents and Employers' Liability," and is written by Crystal Eastman, Secretary of the New York Commission on Employers' Liability and Causes of Industrial Accidents. The other deals with "Standards of Compensation for Sickness, Accident and Death," by Sherman C. Kingsley, of the United Charities of Chicago.

Gossip Along the Great Lakes

CHICAGO, Sept. 7.—The Michigan Association of Local Fire Insurance Agents met last week at Port Huron. Socially the meeting was a great success, as the agents of the city were good hosts, but from a business standpoint it was not of so much account. The one question that constantly came to the front was the inroads on the local business by brokers from the outside. This is worrying the agents, for they do not seem able to cope with the situation.

Sometimes it is the mutuals that start the trouble. They offer a rate lower than the advisory. That starts the assured to shopping to find a stock company that will meet the mutual rate. At points where rates are well observed the local agents can offer only the advisory. An inspector for an outside broker visits the risk and either convinces the inspection bureau that the risk is entitled to a lower rate or suggests improvements that secure a lower rate, and the broker gets the business.

The agents appear inclined to believe that other considerations enter into the deal, but as they have no proof on this point they cannot make specific charges. There is no overhead writing involved, as the policies are sent to local agents to be signed, and they receive a commission. Nevertheless, some of the agents do not like the friendliness of certain of the companies toward the brokers. What are the companies to do? See good business at satisfactory rates get away from them because their agents cannot control it?

* * *

The reinsurance of the Freeholders of Topeka in the Firemen's of Newark last week marked the end of the career of another young company which expanded too fast. The Freeholders was organized in 1904 and its underwriting has been from the start under control of George A. Bailey, former State agent of the Phenix of Brook-

lyn in Kansas. For the first four years its loss ratio was under 35 per cent, but last year it ran up to 57.1 per cent. For the first three years it did a limited business, but in 1908 it doubled its premium income of 1907 and ran its reinsurance reserve up to \$79,000 from \$30,000. With an expense ratio never under 46 per cent, the surplus ran down in spite of contributions of \$80,000 to that account in five years. The fate of the Freeholders furnishes another example of the danger to small companies in branching out into new territory and putting on business too rapidly. The company was operating in five States.

* * *

There is reason to believe that the visit of Professor A. W. Whitney, expert adviser to the New York Legislative Investigating Committee, was of advantage to him and to the committee also. The Professor, so it is said, had not found the New York managers and executives very communicative. Not knowing him or his attitude, they were not inclined to tell him everything he would have liked to learn. In Chicago he got some valuable ideas, and he also learned from O. B. Ryon, attorney of the Illinois commission, how that body had conducted its investigation. Mr. Ryon has no trouble in learning from the fire insurance companies about anything he wants to know, because the insurance men know him and know that it is his intention to be fair. His attitude is not that of a public prosecutor after a bunch of alleged grafters, but of an investigator seeking the truth with a view to improving conditions. Mr. Ryon knows many things that were not brought to the surface in the Illinois investigation. These facts are of the same value to the commission in reaching its conclusions as if they had been brought out, but the companies would not have given them out if they had not known that they would not be made public property. Because insur-

ance companies are very much supervised is no reason why they must give up to their competitors valuable trade secrets and enable mutuals, competing stock companies or muckrakers to attack them to their detriment.

As a result of Professor Whitney's visit the report of the Illinois commission will be somewhat delayed. Mr. Ryon is of the opinion that the two investigating bodies—those of New York and Illinois—can co-operate to the advantage of each. If two States of such importance could agree upon a legislative programme and their legislatures would carry out the recommendations they could very nearly regulate the business in the entire country.

* * *

There are intimations that the National Association of Local Agents in Chicago next week will be a lively one. The decided attitude of the Southern agents in favor of higher commissions is likely to be a factor. The Northern agents, who see the agitation for reduction of expenses, are very much alive on this question. The invasions by brokers are getting more serious all the time.

There is not much discussion of the Presidency of the agency organization in Chicago. This city never has had a President of the National Association. There has been some talk of Clarence S. Pellet for President, but he has not served the apprenticeship in committees and minor offices that most of the recent presidents have gone through. E. B. Case, of Chicago, also is mentioned. He is one of the old and faithful members of the association and has done much committee work.

* * *

P. D. McGregor, Western manager of the Queen, is being talked of for the Presidency of the Western Union. Mr. McGregor has been recognized as one of the strongest men in the business in Chicago. LA SALLE.

INSURANCE IN FORCE
FIFTY MILLION DOLLARS

A Foreign Plan for American Reinsurance

FIRE underwriters in New York, with European connections, have learned recently of a letter sent some time ago to European companies by Mund & Fester, of Hamburg, in respect to American business. The letter asserts that fire underwriting in the United States has had a rather remarkable development in the last twenty-five years. It points out that the premium income has been more than trebled since 1885, while the number of companies writing fire insurance shows a continual decrease. On account of the limited number and insufficient writing capacity of the legally licensed companies, quite a proportion of the American business in congested districts has to be placed in the form of affidavit risks with other than licensed underwriters.

The letter of Mund & Fester also undertakes to show that, despite the conflagrations of San Francisco, Baltimore, Rochester and Chelsea, the general results of the business in this country had been profitable to the capital engaged, a higher profit being reaped by companies which wrote reinsurance only.

It is also pointed out that since the San Francisco catastrophe improved building construction and fire fighting facilities have prevailed in all American cities. Then companies writing a direct business have adopted a control system, which goes beyond the control of the single risk and block limit previously used, and which divides every large insurance area in conflagration districts, whereby it will be practically impossible to incur a loss exceeding a sum fixed in advance.

FIRE AND MINE CAVING INSURANCE THE LATEST.

The Anthracite Finance Company, which is organizing the People's Anthracite Insurance Company at Scranton, Pa., states that the new concern is to insure against fire and mine caving. As to the latter indemnity, the promoters say that it is to be insurance against property damage caused by the settling of the surface and has nothing to do with interior damage. The policy is to cover only the personal property of the assured.

The finance company is obtaining stock subscriptions for the insurance money until the organization of the latter is affected, about October 1. The officers are: Smith B. Mott, President; John R. Wilson, First Vice-President; E. G. Watkins, Second Vice-President; W. T. Hackett, Third Vice-President; H. E. Kimble, Secretary, and A. E. Rogers, Treasurer.

Mund & Fester, therefore, have decided to attempt the organization of an American company to be known as the American Reinsurance Company of New York, and to submit all steps in connection with its organization to the authorities here; in fact, they say that the State Insurance Department in Albany has given its preliminary consent to the proposed charter and intended name. The letter continues:

"We propose a fully paid-up capital of \$500,000; for the time being there shall be issued, however, only 3,000 shares at a par of \$100, whereas the remaining \$200,000 shall be deposited with the American trustees of the company in interest-bearing securities. This liquid surplus of \$200,000 is absolutely necessary in the first year of a new American insurance company, inasmuch as the legal re-

serves can be supplied therefrom at the end of the business year. As provided by law, the funds necessary for the premium reserves cannot be drawn from the paid-up capital stock. As soon as the company will be in possession of sufficient reserves the shareholders will be allotted further shares amounting to \$200,000 in accordance with their pro rata participation.

"As general manager of the company we suggest our New York firm Fester, Douglas & Folsom, and in the event of further discussion we will submit the contract under which the firm would accept the representation. At that time we will also be prepared to give the necessary information as regards the appointment of experts for the 'Advisory Committee' which will be intrusted with the acceptance of contracts."

BRUCE COMMITTEE STARTS.

(Continued from Page 3.)

that legislation was also considered.

"And it was your duty to go to Albany and appear before committees to speak for bills favoring your association, and to defeat legislation unfriendly to the association.

The witness answered in a rambling manner, admitting in a general way that this was the fact. He said that there was very little affirmative legislation. Matters were discussed before executive committees of the Legislature, but very rarely with individual lawmakers.

"About how many counsel did your association employ while you were President?"

"I can't remember."

"About fifty?"

"Perhaps fifty."

Dues \$10,000 a Year.

It appeared that dues of the members were \$10 on gross receipts less than \$50,000, and \$300 for members with more than \$300,000 gross receipts. For members receiving more than \$1,000,000 the dues were \$600. The total receipts of the association from dues, Mr. Rogers believed, was \$10,000 a year at the most.

Mr. Rogers said that he was acquainted with the leading members of the Senate and Assembly during the years when he was President of the association. He remembered that Assemblyman Louis Bedell was chairman of the Committee on Railroads from 1901 to 1905 and chairman of the Committee on Rules from 1900 to 1905. Senator Goodsell was chairman of the Senate Committee on Railroads during some of those years. The Legislative Manual, supplied by Judge Bruce, enabled Mr. Rogers to refresh his memory.

Hazy About Stock Firm.

Mr. Bruce then turned to Mr. Rogers's connection as "special partner" with the brokerage firm of Ellingwood & Cunningham. Rogers's memory proved very bad on this subject. He said that he had never looked into

the books of the firm in regard to his account and said that the books would be found to be the best evidence. It developed that Rogers was not sure when he became a member of the firm or of its address.

"You were connected with the firm of Ellingwood & Cunningham as special partner?" inquired Mr. Bruce.

"I was."

"Where was its office?"

The witness hesitated and then replied:

"No. 41 Wall street, I think."

"When did you become a member of the firm?"

"I don't remember exactly."

"Was it not from 1899 to 1905?"

"You have the records."

Mr. Bruce referred to various dates "to refresh the witness's recollection," his phrase "to refresh your recollection" becoming a stock expression for use with almost every other question. The witness admitted that the books showed that he had become a member of the firm on January 8, 1900, and left it on January 1, 1905. When asked if the firm, from which Mr. Ellingwood had retired in October, 1902, had not gone into bankruptcy about six weeks after he (Rogers) left it, the witness replied:

"You'll have to have better evidence than me."

Can't Recall Accounts.

About his accounts with the firm while a "special partner," Mr. Rogers showed a very poor memory. There were "G. T. Rogers, special account, account Rogers and R." and many others.

"Who was the R?" asked Mr. Bruce.

"Henry A. Robinson, perhaps," was the reply.

When queried about another account, "Rogers and J.," he replied:

"There were so many accounts that I can't remember. I haven't looked into the books."

It was the same way with an account, "Rogers and E." When asked if he had an account for James T. Rogers, former Senator Green and Louis Bedell he replied:

"There may have been one to Rogers, Green, Bedell and Goodsell. There

were so many that I wouldn't be at all surprised."

As "special partner" Rogers said that he had introduced to the firm Bedell, Goodsell, Nixon, Malby, Raines and many other legislators who wished to speculate.

HERE AND THERE.

S. H. Wolfe is making examination of the Shawnee Fire Insurance Company, of Topeka, for the States of Minnesota, North Carolina and Virginia.

* * *

Vice-President J. P. Smith of the Delaware, has had the general agency of that company for New England and New Jersey added to the duties of his position.

* * *

T. W. Kirby, Chief Examiner of the California State Insurance Department, started a movement looking toward an organization of the examiners of the Insurance Department of the several States of the Union. He hopes to get the examiners together in the national convention in the Fall of 1911.

* * *

J. A. Kennard & Co., of Seattle, have been appointed general agents for the States of Washington, Oregon and Idaho, of the Illinois Surety Company for surety bonds and the Prudential Casualty Company for all casualty lines. This office recently took over agencies for the Michigan Commercial Insurance Company and the Old Colony Insurance Company. Associated with the office as general counsel is the firm of Douglas, Lane & Douglas.

* * *

The Surveyor Insurance Directory of the States of New York and New Jersey for 1910 has just been issued. It contains the usual accurate statistics in regard to company staffs, names and addresses of insurance companies, agents and branch managers, with companies represented, and brokers, as well as county and local underwriters' organizations, with names of officers and committees and population of each city and kind of fire department.

New Texas Insurance Law Signed

THE new insurance law just passed by the Texas Legislature and approved yesterday by the Governor provides that all companies shall be governed by the act, and it is expressly stated in the bill that this provision shall apply to the shore and all marine risks. The bill creates a State Insurance Board to be composed of the board and two members to be appointed by the Governor. The term of one of the appointed members expires on February 1, 1912, after which the terms of the successive appointees shall be for two years, thus providing for overlapping terms of office, so that at no time will both the members of the board be inexperienced men.

The bill confers on the State Insurance Board full authority to regulate the writing of fire insurance in the State and also makes it the duty of the board to collect and maintain a record of the fire losses of the State, with a view of classifying them for use in determining equitable insurance rates and the methods of insuring the fire losses of the State. It is made the duty of the State Insurance Board to prescribe, fix, form and regulate the rates of fire insur-

ance and to make and prescribe the general basis schedules, together with rules and regulations for applying the same to specific risks for the purpose of determining the maximum rates at which insurance companies may write insurance in the State. Authority is also given the board to alter, revise, prepare and lower such rates, and to alter and prepare and lower the general basis schedules or any part thereof. It is also empowered to employ inspectors and such other employees as may be needed to carry out the provisions of the act.

The bill provides that the general basis schedule shall be compiled and promulgated by the board as soon as practicable after the law takes effect, and that after the general basis schedules are promulgated that it is the duty of the fire insurance companies to apply the general basis schedules to the specific risks of the State, and thus obtain the maximum insurance rate on these risks. Provision is made that the companies may employ a common agent to apply these schedules, but that the contract with such agent shall be subject to the approval of the board, and that the maximum specific rates obtained therefrom can-

not be in effect until approved by the board.

It is provided that any insurance company may write insurance at a lower rate than the maximum on any risk or class of risks in any particular locality, but that the company doing so must file a copy of such reduction under the signature of its general or State agent with the State Insurance Board and forms prescribed by the board showing the maximum and reduced rates on the risk or class of risks; also that the State Insurance Board shall then file a certified copy of such statement of the reduced rate with the County Clerk or the city's secretary of the locality where such reduction is made.

The bill also provides for the promulgation of uniform policies of insurance by the board and prescribes the co-insurance clause, except on request of the assured, and then only upon consideration of reduced rates. A clause in an insurance policy is to the effect that such policy shall be declared void in the event the insured property is mortgaged. Full pro-

HOME OFFICE OF THE Metropolitan Life Insurance Co.

(INCORPORATED BY THE STATE OF NEW YORK, STOCK COMPANY)
The Company OF the People, BY the People, FOR the People

PROOF OF PUBLIC CONFIDENCE

This company has more premium paying business in force in the United States than any other Company, and for each of the last 16 years has had more New Insurance accepted and issued in America than any other Company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburg, Baltimore, New Orleans and Buffalo.

Paid to Policyholders since Organization, plus the Amount now invested for their Security, \$537,223,523.83.
Number of Policies, 1 Force, December 31, 1909, \$10,621,679. Total Outstanding Insurance Placed and Paid for, December 31, 1909, \$2,041,951,700.00.

In Its Ordinary Department policies are issued for from \$1,000 to \$1,000,000 on Individual lives, premiums payable annually, semi-annually and quarterly. In Its Industrial Department policies are issued on all the insurable members of the family for weekly premiums.

Full particulars regarding the plans of the Metropolitan may be obtained at its Home Office, 1 Madison Avenue, New York City, or its Agents in all the principal cities of the United States and Canada.

Western Life and Casualty News

CHICAGO, Sept. 7.—Several years ago in one of the Western States there flourished for a time a fraternal society. By degrees it acquired a very bad reputation and eventually its home office was found bare, except for some worthless supplies and similar junk left scattered about. The head of this institution received considerable space in the newspapers and insurance journals. He bore a professional title and a name not met with every day. After the concern decamped from its Western home a fraternal with a similar name began business in Chicago, and later was succeeded by a legal reserve company. All this would amount to nothing were it not for a strange coincidence. The head of this Chicago company bears the same surname and initials as that of the former Western fraternal. The Chicago man is plain "Mr.," however, and inquiry at the office for a man of the same name with a title calls forth from employees a correction. Some of the personal characteristics of the Chicago man are said to greatly resemble those of the man further West. Yet they are not the same person; at any rate the Chicago man says they are not.

* * *

Word has been received at Chicago that a movement is on to stampede the annual meeting of the National Association of Life Underwriters at Detroit for W. C. Johnson, manager of the Phoenix Mutual Life at New York, for President. Mr. Johnson came prominently before the life underwriters of the country at the time the Armstrong law was before the New York Legislature on account of effective work he did. Since then he has done much for the General Managers' Association of the Phoenix Mutual and last year at Louisville he was considered for the Presidency of the National Association. Close friends of his, however, say that it will be impossible for him to accept the office if it should be tendered to him, and will do all they can to block any

move in his direction.

H. J. Powell, general agent of the Equitable of New York at Louisville, is being talked of for the Presidency in the West, and L. Brackett Bishop, general agent of the Massachusetts Mutual at Chicago, is also mentioned.

* * *

The Chicago office of the National Surety is looking for a large business in the execution of automobile bail bonds, or, to speak more accurately, in the sale of appointments of attorneys in fact to execute such bonds. Although the company has done a thriving business in the East in furnishing owners of automobiles blank bonds and commissions as attorney for the execution of the bonds, this line never has secured a foothold until now in Chicago. The instructions to the desk sergeants at the police stations were to accept only bonds of owners of real estate of a certain value. The National Surety had not succeeded in getting this rule changed.

Recently there has been organized in Chicago an automobile owners' protective association, which agrees to furnish its members certain service. One part of its service is to give each member a commission as attorney-in-fact for a surety company, so he can sign bonds for his release in case of arrest. This association has contracted with the National Surety to furnish these commissions and has secured an order of the Chief Justice of the Municipal Court and of the Superintendent of Police, providing that bail bonds of automobile owners shall be of \$200 penalty and that corporate sureties shall be accepted. The association is headed by Tom Murray, the clothier and haberdasher, who placards the street cars with his peculiar advertisements, containing a picture of the back of his head with the legend, "Meet him face to face." His well known hustling ability is thought to guarantee a large business for the new organization.

* * *

The question of burglary losses is one which some of the Chicago managers find it painful to discuss. The last few weeks have run up the loss ratio of part of the offices to an abnormal figure, and there are no immediate prospects of a cessation. One important office states that its losses have occurred mostly under residence policies, and that it has done pretty well on mercantile business. Another smaller one has a low loss ratio on residence business, but mercantile and hold-up losses have played havoc with its year's record. The chances are that when the Illinois returns for the year are made up they will show that few, if any, of the companies made any money. One unpleasant feature

of the situation is that a few of the offices paid excessive commissions last Fall and Winter to get the policies under which they now have losses to pay. Of course, their Illinois expense ratio will not show up in the returns, but that is very little comfort to those who know from their own books what that ratio was. That orgy, however, seems to have cured the local men of all desire for another.

Bardoe's Column.

THE directors of the Empire State Surety Company have made a proposition to the stockholders of the People's Surety Company that the two corporations be amalgamated on the basis of an exchange of the stock of the People's Surety for that of the Empire State Surety. Should this plan be acceptable to the People's Surety stockholders, the result of the amalgamation would be to give the Empire State Surety a capital of \$750,000 and a surplus of about \$300,000 to \$350,000, with a bond writing capacity of well over \$100,000.

* * *

Edmund L. Benson, of Richmond, Va., has been appointed general agent of the Empire State Surety Company for accident and other casualty lines in the State of Virginia.

* * *

The plan of the Continental Insurance Company for entering the Dominion of Canada is maturing. An initial deposit of \$50,000 in bonds will be made at Ottawa, and the company will have at Montreal a general agent who will have a power of attorney

for the company. In Newfoundland George R. Williams, of St. Johns, will represent the company, and John McCormack, of St. Johns, will be the agent of the Fidelity Underwriters.

* * *

J. J. Guile, resident manager of the Sun Insurance Office of London, was married recently to Miss Susan Helen Snock, of Berkeley, Cal. Mrs. Guile is a sister-in-law of Carl A. Henry, the Pacific Coast general agent of the Sun.

* * *

The American Casualty Company of Tacoma has applied for admission to the States of Oregon, California and Idaho, and will shortly apply for entrance to Indiana, Illinois, Michigan, Wisconsin, Ohio and Pennsylvania.

* * *

Walter J. Odiorne, long connected with the brokerage firm of Shubert & Odiorne, has been appointed Philadelphia agent of the New Amsterdam Casualty, succeeding George R. Purdy, who goes to the home office of the company.

* * *

The Boston Civil Service Commission has not as yet acted on the appointment of Charles Daly, to whom Mayor Fitzgerald, of that city, offered the position of Fire Commissioner, which said Daly is willing to accept should said commission confirm the appointment.

* * *

Joseph Button, Commissioner of Insurance for Virginia, recently revoked the license of the Royal Benefit Society of Washington, D. C., to do business in his State. The society has taken an appeal to the State Corporation Commission, and Mr. Button has submitted a lengthy statement of the reasons for his action, coupled with a report of an examination by the Insurance Department of Virginia and North Carolina.

* * *

The New York Insurance Department is examining the United Insurance Company of Arizona, which is trying to organize the United Fire Insurance Company of New York. The office is at 100 William street, Ferris E. Shaw being in charge. This inquiry is in line with the recent legislation giving the State Superintendent of Insurance authority to investigate the affairs of all promotion of holding companies seeking funds in this State to organize insurance companies. The incorporators of the United Fire Insurance Company of New York are as follows: Ferris E. Shaw, L. D. Garrett, E. R. Chapel, John S. Juno, Henry S. Foster, Hartwell Cabell, William Badt, Stewart Goodrell, Paul S. Knowles, George F. Kuebler, William A. Munson, Frank C. Hoople and Frank A. Mower.

Pronounces Supervision Inadequate

L K. PASSMORE, Vice-President of the Penn Mutual Life, in a recent address to the agents of the company, declares that "the inadequacy of the laws of New York as a protection to the insuring public is felt because such laws do not extend beyond the State lines and are obligatory only upon comparatively few companies transacting life insurance within its borders." He contends that existing legislation is not sufficient to make all companies conform to just methods, and he presents statistics to show that of 187 life insurance organizations but thirty-five comply with the requirements of the New York law, while 152 operate under methods which afford no guarantee to the public of solvency.

Continuing, Mr. Passmore says:

Of these companies sixteen that were organized in 1905 write 113,126 policies for \$41,763,366 of alleged life insurance. This group collected in premiums \$4,654,170, paid death claims of \$751,648 and absorbed for expenses of management \$2,013,169, or more than 43 per cent. Individual companies in the group are much worse, several using more than 55 per cent of the receipts for salaries, commissions, etc., and one over 75 per cent. Among them all is scarcely a company which gives evidence of present and prospective stability, and not one where the cost to the insured is reasonable.

Twenty-four companies organized in 1906 show assets of \$7,166,601; liabilities of \$2,988,634, and a surplus, in which is included the capital stock, of \$4,157,957. The total of insureds in this group numbers 77,830, for \$103,505,251. The premium income was \$3,504,471; the total receipts from all sources, \$4,180,630; death claims were \$354,762, and aggregate payments to policyholders, \$482,285. The expenses

of management, exclusive of taxes, were \$2,216,292, being 63 per cent of premiums collected and 53 per cent of total receipts. The lowest expense ratio shown by any of these companies is beyond any reasonable figure.

Of the twenty-five companies that were organized in 1907 one or more may be regarded as of a better variety, with some possibility of surviving. The aggregate assets of these twenty-five were, on December 31, \$6,389,125; liabilities, exclusive of capital stock, which in several constitute the major part, \$2,563,608; the outstanding insurance was 60,470 policies for \$95,336,088. The premium income of the year was \$2,952,736; total income, \$3,934,442, and expenses beyond taxes, \$1,866,163. The ratio of expense of management to premium income was therefore 63 per cent. In this group no company has a ratio of such expense less than 55 per cent, but as nearly all are using the "preliminary term" plan and the total insurance outstanding of \$95,336,058 has been written within a brief period, the expenses by comparison with those of their predecessors in this line do not seem excessive.

Ten companies are embraced in the list that were organized in 1908. These had assets of \$2,055,972; liabilities were \$695,031, and an apparent surplus to policyholders of \$1,372,941. The insurance outstanding covered 39,683 policies for \$31,875,340, of which 44,338 policies, for \$23,028,950, appears to have been written last year. The premium income was \$990,378, of which \$213,935 was paid to policyholders and \$871,072 was devoted to expenses of management, being 87 per cent of the premium income. The lowest expense ratio of any company in the group was over 60 per cent.

Twenty-three companies were organized in 1909. They had assets of \$6,610,094, with a surplus of some-

thing in excess of \$5,000,000. They issued last year insurance to the amount of \$28,371,799, of which \$27,515,183 was in force at the end of the year. The premium income was \$716,299 and the aggregate payments to policyholders \$31,158. Expenses of management absorbed \$1,466,480, which is \$750,181 greater than the total premium income representing 166 per cent thereof. The deficit, of course, was made good, where made good, out of capital contributed for this purpose, the total income of the group apparently being \$4,446,636.

To sum up the situation, the ninety-eight companies which were organized in the years 1905-1909 inclusive have insured 360,970 lives for \$377,626,611. They received last year a premium income of \$12,818,061, returning to policyholders in the way of death claims and dividends \$2,484,706.

The expenses of management, exclusive of taxes, were \$8,160,337, or 63 per cent.

Is this a volume of business which the State should supervise?

Do discriminating persons buy this grade of insurance?

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

Bob's Remarks.

C HARLES R. SHAW, Secretary of the insurance firm of the J. R. Skinner Company, died on Friday last from cancer trouble. He was 66 years of age and had formerly a prominent connection in the well known dry goods firm of the Telft-Weller Company, which was absorbed by the H. B. Claflin Company.

* * *

As stated in our issue of August 25, and referred to later in other press advices, the Pacific Coast Casualty Company has become a member of the excise bond pool. As yet, however, it has not joined the liability conference and may not for some time. Brokers report that this popular company is doing a "land office" business in liability commitments.

* * *

Whilden & Hancock are still adding to their list of solid companies. This growing agency has just been appointed general manager for the Scranton Fire Insurance Company, of Scranton, Pa. The only territory excepted is that of Pennsylvania.

* * *

Monday was Labor Day, but, in consequence, very few labored.

* * *

The head United States offices and agency department of the Hamburg-Bremen have removed to the tenth floor of the Underwriters' Building, at 123 William Street.

* * *

The New York Fire Insurance Exchange committee changes are as follows:

C. W. Sparks, of the London Assurance Corporation, retires from the Arbitration Committee, and is succeeded by W. C. Chambers, of the Sun Insurance Office.

The Arbitration Committee now consists of the following members: A. E. Miller, chairman; F. H. Crum, J. H. Kelly, J. W. Nichols, J. F. Hastings, D. T. Walden, W. C. Chambers.

M. J. Ennis, of the Peter Cooper Fire Insurance Company, retires from the Brokerage Committee, and is succeeded by F. H. Way, of the Williamsburg City Fire Insurance Company.

The Brokerage Committee now consists of the following members: W. D. Sammis, chairman; C. A. Garthwaite, T. A. Ralston, W. M. Morris, C. C. Wayland, A. Lenssen, Jr., F. H. Way.

Geo. C. Howe, of the Niagara Fire Insurance Company, retires from the Executive Committee, and is succeeded by Charles E. Wickham, of the City of New York Insurance Company.

The Executive Committee now consists of the following members: Charles A. Norris, chairman; Wallace Reid, E. E. Pearce, D. M. Darby, C. G. Smith, C. S. Conklin, Charles E. Wickham.

W. B. Ogden, Jr., of W. B. Ogden

& Son, retires from the Rate Committee, and is succeeded by F. H. Ross, of the agency of F. H. Ross.

The Rate Committee now consists of the following members: E. F. Schleyer, chairman; Otto Dellevic, H. J. Ferris, James Marshall, H. E. Hess, F. A. Pawley, F. H. Ross.

* * *

The National Association of Local Fire Insurance Agents will hold its convention in Chicago shortly. At this meeting the question of brokerage and commission will come up.

* * *

The recently published statement of the Illinois Insurance Department regarding classification of risks, brings to mind the contention made by the writer in 1897 along the same lines. At that time it was suggested that there should be a simplified form of universal classification covering say the metropolitan district. In other words, how is it possible to have universal rates without uniform experience? It appears that the Illinois Department has reached first of all States a similar conclusion.

* * *

By some students in fire underwriting it is claimed that if the classification of risks individually is of value to each office in arriving at proper premium charges, some simple form of universal classification similar to that of the Illinois Department of Insurance could be adopted without disturbing the methods and individual classification lists of various companies. Again there are many who believe that classifying of risks is time and energy wasted, and there are nearly as many opinions on that very subject as there are upon the proper rates to be charges upon different classes of risks.

* * *

The old rate for liability insurance on taxicabs was \$125. Under the new conditions the figure has been advanced to \$400. Going some.

* * *

Important alterations at the ferry terminals of the four big railroads—Pennsylvania, Erie, Jersey Central and Lackawanna—at the foot of West Twenty-third street are rapidly approaching completion. When finished the area outside of the ferry houses will embrace a park, beautiful walks and approaches and fine electrical effects.

* * *

Annual conventions in the insurance world will be largely in evidence for this month and next. No less than some seventeen of these meetings are to be held, embracing fire, life and casualty interests.

* * *

The New York State Insurance Department is making an examination of the Home of New York.

COMPARATIVE RESERVE TABLES

By MILES M. DAWSON,
Consulting Actuary.

Containing Mean and Terminal Reserves for the usual forms of policies and by the following standards—

- American Experience, Select and Ultimate $3\frac{1}{2}$ per cent.
- American Experience, Select and Ultimate 3 per cent.
- American Experience, Modified Preliminary Term $3\frac{1}{2}$ per cent.
- American Experience, Modified Preliminary Term 3 per cent.
- American Experience, Select and Ultimate $4\frac{1}{2}$ per cent.
- Actuaries', Modified Preliminary Term 4 per cent.
- American Experience, Committee of Fifteen, $3\frac{1}{2}$ per cent.
- American Experience, Illinois and Tennessee, $3\frac{1}{2}$ per cent.
- American Experience, Michigan, $3\frac{1}{2}$ per cent.
- American Experience, Wisconsin, $3\frac{1}{2}$ per cent.
- American Experience, New Jersey, $3\frac{1}{2}$ per cent.
- H^M, Canadian Life Officers' Association, $3\frac{1}{2}$ per cent.
- O^[M], Select and Ultimate, $3\frac{1}{2}$ per cent.

This covers all the standards, other than the net level premiums, in this country. Tables showing the first year margins set free by each method of valuation are given.

EDITION ALMOST EXHAUSTED ————— SAVES TIME AND MONEY

VARIOUS DERIVED TABLES---American Experience 3 and 3 1-2 PER CENT.

Table of Contents.

Single Premiums, Pure Endowment.
Accumulations, Pure Endowment.
Forborne Immediate Annuities.
Accumulated Temporary insurances.
Accumulated Increasing Insurance.
Single Premiums Endowment Insurance.
Single Premiums Temporary Insurance.
Immediate Temporary Annuities.
Valuation Columns.

SELECT AND ULTIMATE VALUES.

Single Premiums, Whole Life.
Life Annuities.
Terminal Reserves, Life, Limited Payment Endowment.
Mean Reserves, Life, Limited Payment, Endowment.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.
Curtate Summations of D Column.
Immediate Temporary Annuities.

Uses.

- Computing Annual Term Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
- Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities. For these purposes the "select and ultimate" will be most useful.
- Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
- Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
- Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.
- Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
- Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
- Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
- Warranted Commissions for New Business.
Surrender Values.
Dividends.

System of Workingmen's Accident Insurance in Germany

By Miles M. Dawson

Copyright, 1910, by Miles M. Dawson.

BERLIN, Aug. 14, 1910.—The general impression in the United States at all times since the German accident insurance laws were enacted a quarter of a century ago has been that here is a system of paternal state insurance. This notion, however, is utterly erroneous. It is state insurance in the sense that the state compels one to insure, but the state neither owns, operates nor (out of general taxes) contributes to the insurance institutions and its regulation of them is immensely less strict than its regulation of general insurance companies, such as stock or mutual life insurance or fire insurance companies. The money to pay for the insurance is collected from and by the insured and is administered wholly by them.

The insurance provided for is as follows:

In event of disability, whether permanent or temporary:

For the first thirteen weeks following the accident, by funds administered by mutual sickness insurance societies.

Beyond the thirteenth week by funds administered by mutual associations of employers.

In event of death:

By mutual associations of employers.

The sickness insurance societies are managed by their own boards of trustees, the employers electing one-third of them and the employes two-thirds. If the legislation now proposed by the government passes, the representation will be equal.

The mutual associations of employers are managed by boards of trustees, all the members of which are elected by the employers.

These boards determine the rates of premiums, not merely for classes of risks, but for each risk, if they wish to do so; adjust and pay all claims, make the collections, invest the funds, and, in general, conduct the affairs of the associations without interference by public officials.

The injured workman—or the dependents of a workman who has been killed—may appeal, however, without cost, from the adjustment by the association of employers to an arbitration board composed of equal numbers of employers and employes, and even from them, also without expense, to an imperial board or court, composed of employers and employes in equal numbers, and of lawyers and engineers. All this the state pays for, but, although there are frequent appeals, it costs the state immensely less than such litigation in the ordinary courts would cost, and the expense of the societies or associations is also very

little in the aggregate.

The state, as has been said, contributes out of general taxes nothing either to the sickness insurance societies or to the mutual associations of employers. It merely enforces the payment of these premiums as, in effect, a special industry or occupation tax and employs these societies and associations as an arm of the Government, to collect and administer the taxes. The sickness insurance societies furnish medical attendance, medicines, nurses or hospital treatment if necessary, and a weekly allowance of 50 per cent of the wages while disabled, either by sickness or accident—for at least thirteen weeks. Employers pay one-third of the cost and the employes two-thirds. If the new proposal of the Government passes this will be made half and half.

In the mutual associations of employers the employers contribute the entire cost.

The state provides very simple regulations for these societies, leaving large liberty of action for the management.

But it absolutely requires employers to insure their workmen in the mutual associations of employers, paying all the cost, and also to see to it that all their workmen are insured in sickness insurance societies, the employer paying at least one-third of the cost, except in the special instance, hereinafter mentioned. That every employer do this is a condition to his being permitted to carry on his business and is enforced as follows:

As to making the contributions to the mutual association of employers, to which he is required to belong, he is liable, merely because he carries on that business. He must open his books to its officers, must pay the premiums as fixed by them and must regulate his establishment as their rules require. The premiums are collectible as if they were taxes, and failure to pay also renders one liable to fine and to loss of license to carry on that business.

The same is true also as to the employer's contributions to sickness insurance funds, as to his requiring his employes to insure and to keep insured and as to his liability for deducting their contributions from their wages and as to his turning over the contributions so deducted.

The employe may be insured in any one of several classes of sickness insurance societies, the most important of which are (a) the communal society, in which everybody must be accepted, and all must insure who are not insured elsewhere; (b) a society confined to members of

the trade; (c) a society confined to employes of one employer (or a group of employers), and (d) a private, voluntary society.

Only in case one belongs to a private society is the employer free from the obligation to contribute. He is not, however, free from the obligation to see to it that the employe is insured. That works as follows: If an employe takes sick and is not insured elsewhere the communal society must treat the case precisely as if he were insured with it; it then presents its bill to the employer for its outlay and for all the contributions which both employer and employe should have made, with an additional penalty, which may be small or large as the offense has been infrequent or frequent. This causes employers to look askance at the private societies and the fact that the employer does not contribute renders them unpopular with workmen.

The system in both the sickness societies and the associations of employers is assessment—that is, no mathematical reserves are set up, either to represent unearned premiums or to provide funds for meeting payments to be made in future because of disabilities or deaths, which have already taken place. In sickness insurance, where the benefits are for brief periods only—such as thirteen weeks, twenty-six weeks, or at most fifty-two weeks—a more or less stable equilibrium of cost was long ago arrived at. In accident insurance, where benefits for permanent disability are payable for life and for loss of a husband, throughout widowhood, theoretically such an equilibrium would not be obtained for at least fifty years—probably longer. But improvement in prevention of accidents has in some of these associations caused the annual cost to decrease after some ten or twelve years. This is very rare, however; as a rule the cost more or less steadily increases.

This system, whether applied to sickness insurance or to accident insurance, with benefits payable in annuities, would be unsound and ruinous in private, voluntary associations. The sickness society would sooner or later be affected by adverse selection, like an assessment life insurance society, the young and healthy keeping out and even going out. And as the annual cost increased in a mutual accident association, the insured would one by one drop

out, leaving the concern overburdened with an accumulation of payments because of accidents that have already occurred.

That the insurance is obligatory obviates those means of wrecking the insurance societies or associations—as to the sickness societies, perhaps fully—as to the employers' associations, in the main. The Government has deemed it wise to require the latter to accumulate considerable reserves, so as to meet the condition of a sudden and prolonged cessation of industry, as, for instance, due to war or famine. The sickness associations, also are usually encouraged to accumulate considerable sums. The Government's interest, is, in part, that it is behind it all, and, in event of any breakdown, must see that all obligations are fulfilled. In other words, though so democratically administered, the insurance scheme is deemed state insurance and the performance of a governmental or public function—much as our own courts hold concerning railways, telegraph lines and the like.

Notwithstanding the more or less steady increase in cost, employers like the system, declaring that they much prefer to keep the money in their businesses, instead of withdrawing it to be invested at a very low rate of interest.

The expenses are low, amounting to no more than 10½ per cent of the premiums, which also includes very considerable sums which are expended directly for prevention of accidents and for the restoration of the disabled. Among the principal advantages claimed for the system of the associations of employers are this economy, this efficiency in prevention and efforts put forth to restore the disabled.

The expenses of the sickness insurance societies are lower, averaging about 8 per cent of their premiums. This also includes considerable sums for prevention. An important feature also is educational propaganda in all matters relating to hygiene. Expense of medical treatment is not included in the foregoing, such being of the nature of benefits.

It is to be remembered that neither the employers' associations nor the sickness insurance societies pay any commissions to agents or fees for collecting premiums. They also have no court costs to pay, but they must pay their own lawyers and all others employed by them to defend suits.

Along the Shore of Lake Michigan

CHICAGO, Sept. 14.—The Western Department of one of the prominent companies writing automobile insurance states that its heaviest losses are coming from the theft of machines. That other companies have had a similar experience appears from the fact that new rates are to be in force within a few days, which are graduated so as to be relatively lower on very expensive cars than on cheap ones. This plan of graduation is said to be due in part to the fact that very expensive cars are not as easily disposed of by thieves as are those at lower prices.

* * *

Some fire underwriters in the West are keeping a careful eye on automobile factories, except those of established reputation and known financial standing. There is a considerable feeling in the West that one of these days the automobile industry is going

to be found to be badly overdone and the bottom will drop out of it, cleaning up a number of concerns that have not the advantage of plenty of capital and of good sales for their product.

* * *

While local agents throughout the West are much wrought up over the loss of their business to brokers, one feature of the situation about which they specially complain is that the brokers sometimes secure reductions in rates without any changes in the risks themselves. It appears to be a fact that this occurs at times, and the explanation given is that the inspectors for the brokers find where the raters have made mistakes and merely secure corrections. While these cases are not very frequent, it is admitted that the inspection bureaus do make some mistakes in their estimates. This is charged in part to the fact that

their income is not large enough to enable them to retain their best men against the bids of the companies who want them for special agents. There are some companies which would willingly pay a higher price for advisory rates and thus put the inspection bureaus on a better financial footing, but some companies object to paying even the present prices.

Speaking of brokers and their practices, an underwriter for one of the prominent companies was recently recounting some experiences showing the dictatorial attitude of the brokers. He state that when one of the big brokers captures a desirable large line, such as a traction system, he tells the company how much of it it may have, presents the form and names the rate to which the inspection bureau has agreed. The company

(Continued on Page 14.)

Investigating Committee on the Black Horse Cavalry Trail

Goodsell and Bedell Long on the Stand—Subpoena Servers Have Been Hunting Two Weeks for Henry A. Robinson, General Counsel of the Metropolitan Street Railway.
May Want Buckley's Albany Bank Accounts, Once Denied

PROGRESS was made this week when the Legislative Investigating Committee, with the aid of the District Attorney's office, obtained the right to look at the books of the Stock Exchange firm of J. S. Bache & Co. While the testimony before the committee so far has had to do with the financial accounts of former Senators and Assemblymen, it is understood that the committee will want statements connected with the Albany bank accounts of William H. Buckley, which were denied last Spring at the examination conducted by Superintendent Hotchkiss. Buckley, himself, is believed to be in Canada.

At the public hearing of the committee in City Hall yesterday, the name of a still active political leader came in. C. H. Betts served as engrossing clerk for the Revision Committee of the Assembly in 1908. He is now a member of the Republican State Committee from Ontario County, and on August 17, when Vice-President Sherman was chosen for Temporary Chairman for the coming Republican State Convention, Mr. Betts voted for Colonel Roosevelt.

The new witness yesterday was H. M. Beardsley, Secretary of the Elmira Public Service Corporation, who succeeded W. W. Cole as Secretary and Treasurer of the New York State Railway Association. He denied that while he was Treasurer the association paid any money for legislation or for "information about legislation at Albany." Then Mr. Bruce confronted the witness with documentary evidence that the witness had paid C. H. Betts \$1,750 for information furnished at Albany concerning railway legislation. The witness amended his testimony.

Ex-Senator Louis F. Goodsell took the stand yesterday and Mr. Bruce wanted to know particularly about two items in the ex-Senator's account with Ellingwood & Cunningham—one a credit from H. A. Robinson, general counsel of the Metropolitan Street Railway, for \$9,000, and the other a payment through Goodsell of \$19,600 for 1,400 shares of Transportation stock made up from the holdings of S. Fred Nixon, Jotham P. Allds, Archie Baxter, Louis Bedell and James T. Rogers.

Mr. Goodsell explained the first of these items by saying that it was money which had been paid back to

him by G. Tracy Rogers in return for 10,000 that he had advanced at Mr. Rogers's instigation to the Republican State Committee, of which Daniel L. Fox was then Treasurer.

He admitted that he knew the money was to be made up from the contributions of the traction interests, but could not see that they had anything to hope from so large a contribution to the State Committee. It was so long before the "interests" made up this sum, and therefore so long before Mr. Goodsell was reimbursed, that he admitted he had had some doubt about ever receiving the money. He said he did not know that the \$9,000 had come from Robinson specifically.

The fact to which Assemblyman Foley called Goodsell's attention that the day before he had received the long-delayed repayment of the \$9,000 from Rogers through Robinson, a change in the charter had been effected which continued and strengthened the franchise of the Fifth avenue stage line, had escaped his memory.

Judge Bruce said before the session that he had failed to locate Henry A. Robinson, general counsel for the Metropolitan Street Railway Company during the time the Black Horse Cavalry was most actively engaged. Two men have been endeavoring to serve a subpoena on Mr. Robinson for the last two weeks. At first he was said to be away yachting and planning to touch at ports unknown. Later his office at 2 Wall street announced that

he would return on Tuesday after Labor Day, then that he would be back this week, and finally that he would not return until October.

J. S. Bache & Co. Yield Books.

William J. Wollman, counsel for the brokerage firm of J. S. Bache & Co., called at the office of District Attorney Whitman on Tuesday and announced that his clients had decided to allow the legislative investigators to inspect the firm's books. Wollman went in answer to a warning issued on Monday by District Attorney Whitman that a warrant for the arrest of Leopold S. Bache, the firm's floor member, on a charge of violating Section 1,330 of the Penal Code, would be issued if the books were withheld from the committee any longer.

For two weeks M. Linn Bruce had sought these books without success. He first requested Bache & Co. to allow the committeemen to look over the books in the firm's office. This met with a refusal, and Mr. Bruce then attempted to have the books produced at one of the public hearings of the committee. In this, too, he was unsuccessful.

The books in question are supposed to contain much valuable information about the Wall Street operations of Albany legislation before 1906. They are expected to furnish disclosures as interesting as those brought to light.

(Continued on Page 9.)

Vail Pleads Not Guilty

LEWIS H. VAIL, President of the Dutchess Fire Insurance Company, was placed on trial on a charge of forgery before Justice Morschauser at Poughkeepsie, N. Y., on Monday under an indictment obtained in the early Summer by Superintendent Hotchkiss, of the State Insurance Department. He is charged with having ordered removed from the minute books of the company a page containing a resolution passed by the directors regarding the reinsurance of business taken over from the Dutchess Insurance Company, which went out of business soon after the San Francisco earthquake and fire.

The resolution, Superintendent Hotchkiss charges, would have prevented the new company from doing business had it come to the attention of the State Insurance Department.

The case came to an abrupt adjournment at noon, when Justice Morschauser heard argument on a demurrer made by Abraham J. Rose, counsel for Vail, who said that the same crime was charged several times in the one count of the indictment, and could not, therefore, hold. Justice Morschauser asked for briefs and the jurors were excused until yesterday.

The demurrer was overruled yesterday, the Judge holding that the indictment sufficiently charged the crime. The trial of the case was resumed and Vail entered a plea of not guilty.

Liability Underwriters

THE third annual meeting of the Liability Insurance Association will be held at the Hotel Plaza commencing on October 19, and continuing on the 20th.

The afternoon of the 19th will be devoted to the reading of papers on liability reserves by two representatives of insurance departments, which reading will be followed by a general discussion of this matter, which is of much interest to the liability insurance companies. The routine business, including the election of officers will also come up during the afternoon session. The day following papers will be read by at least five persons who have made a special study of workmen's compensation legislation and who will be qualified to treat this subject in a comprehensive manner from the following viewpoints:

(a) The constitutionality of such legislation, by an attorney who has made a special study of this subject as a member of one of the State commissions.

(b) The employer's viewpoint, by a representative of one of the large manufacturers' associations.

(c) The workmen's viewpoint, by one of the leading labor leaders of the United States.

(d) The actuarial or probable cost viewpoint, by an actuary who has given this matter special study for some years.

(e) The humanitarian viewpoint, by a member of one of the commissions whose researches and investigations of industrial accidents have been such as to qualify the speaker to treat this subject in a very practical manner.

The Executive Committee will issue invitations to the insurance departments and to the members of the commissions appointed by the different State Legislatures to investigate workmen's compensation legislation, they will doubtless be present in large numbers, and participate in the general discussion on the above subjects.

The importance of the meeting caused the Executive Committee to arrange a two-day session, instead of one, as in the past. It is expected that representatives of the National Manufacturers' Association, the National Civic Federation and other bodies interested in this subject will also be represented at the meeting. Ten special invitations will be forwarded to each company for such distribution as may be desired.

INSURANCE DEPARTMENT IN BRITISH COLUMBIA.

In its report to the Government of British Columbia the Fire Insurance Commission has recommended that an insurance department be created in the Province. Summarized, the further recommendations of the commission are that no unlicensed company or association of underwriters or their representatives should be permitted to solicit fire insurance in the province; that all insurers should be permitted to take their insurance freely with such unlicensed companies or associations of underwriters, including mutuals and Lloyds, and should have the right to obtain inspection of their risks and adjustment of their losses upon obtaining a license for that purpose, only on the department naming the inspector or adjuster, and that the Lieutenant-Governor in council should have the right from time to time to make and enforce regulations to prevent the solicitation of business by such inspectors and adjusters; that any company or association of underwriters should be required to obtain a license entitling it to do business throughout the province without a further license from the municipality, and as a condition of obtaining such license it should satisfy such department of its financial standing and make a deposit in cash or securities or a satisfactory bond of a guarantee company in lieu thereof for reinsurance of its risks to be administered by the department, the amount of such cash or bond to be determined by the inspector after considering the evidence submitted; that such department should have full power to investigate all fire losses and give out the information as obtained upon request; that the department should have full power to investigate all fire losses and cancel licenses, subject to an appeal to the Lieutenant-Governor in council; that for the purpose of obtaining such a department a tax be imposed on premiums paid by all insurers doing business with licensed or unlicensed companies; and that there should be no provision for licensed brokers; and that the present municipal license fee should be abolished.

PENNIMAN PROMOTES CHESAPEAKE GUARANTY.

It is reported in Baltimore that Henry G. Penniman, former President of the United Surety, has obtained subscriptions to about \$250,000 of the stock of the Chesapeake Guaranty Company, which he is organizing, and that a large block of the stock has been taken by Reilly & Farley, of New York, former general agents of the excise bond department of the United Surety in New York, who, when the company was excluded from New York State last Spring, were left without a company in which to place their excise business, amounting to perhaps more than \$100,000 in premiums.

The Chesapeake Guaranty Company was incorporated last Winter as an automobile insurance company, but with charter rights so broad that it can do practically any kind of casualty and surety business. It was incorporated by some politicians from the Eastern Shore of Maryland, but the real movers in securing the charter were certain clerks and department heads in the United Surety. At the time the United was seriously impaired and they figured that if worst came to worst and it should be obliged to retire they would have a charter and be able in a short time to have a company in the field and take over the valuable agency plant of the United. The emergency did not arise and the charter probably would have lain dormant for some time had not Mr. Penniman secured control of it.

THE EMPIRE CITY PLANS A MERGER.

Action is being taken by the Board of Directors of the Empire City Fire Insurance Company and the New Amsterdam Fire Insurance Company looking to the merger or consolidation of the two companies under the name of the Empire City Fire Insurance Company, with a capital of \$400,000 and a surplus in excess of \$250,000. Charles A. Hull and David J. Burtis will undoubtedly be officers of the merged company.

either:

National Life Underwriters at Detroit

NINETEEN years ago the National Association of Life Underwriters met in Detroit. On last Thursday they opened their annual convention in Detroit once again. The chief characteristic of the Eastern changes was the amalgamation of East and West in the one organization with the one purpose of raising the professional standard of the business. About 200 delegates were present. The meeting was opened in the convention hall of the Pontchartrain by the President of the association, John Whittington, who in his opening address had these things to say:

When the legislators you elect fail to give relief from oppressive laws and fail to enact proper ones enter the arena of politics and seek your positions on the floors of the Legislatures. Wherever this has been done in the past we have succeeded in getting recognition and just laws, which have benefitted our companies, our policyholders, our agents and the public at large. We have laws and restrictions foisted upon us in many States by men who know almost nothing of the actual needs of either the company, the agent or the policyholders, and in no respect have they the interest of our business at heart. No one understands our needs better than you. No one can bring about a more intelligent remedy, when necessary, than you. Rest not until you have come into your own power in your own community and State. You owe it to the business, to the field man and to the great insuring public.

War on Twin Evils.

For many years we have been steadfastly fighting to stamp out rebating and twisting, two of the greatest enemies of progress. How well we have succeeded cannot be answered by any one man. The evil has not been entirely blotted out, but as twisting is a question of education, it will take time and patience to inform the policyholder of its evils, and it will also take time and patience to eliminate the undesirable class of agent who would stoop to such practices. Rebating is a question of common honesty, and it behooves us individually and collectively to redouble our efforts in the fight for reform along both these lines. The twister in the past has appeared in many phases and disguises. Oftentimes he poses to the insured as a man possessed of exceptional and exclusive insurance knowledge and calls himself an "expert" and so advertises. Beware of this man. He is invariably an outcast from the ranks of accredited life insurance salesmen. The legitimate agent of a legitimate company is the only man entitled to call himself "expert" and our ranks are full of such.

Old Enemy in New Guise.

Like an insidious reptile worming its way into the confidence of the unsuspecting policyholder, the twister has made his appearance in a new disguise. I refer to the self-styled

abstract companies, whose activities in several cities during the last few months have been sufficient that we as a body must recognize the danger of allowing them to operate anywhere in this country unchallenged. They are twisters of the very worst type, worst in the sense that they do not represent any particular company and endeavor to impress their victims by their seeming disinterestedness. Vice-President Powell, who has personally encountered these manipulators, will, in his report, refer to them and to their operations. I strongly recommend that our association take some action toward giving the utmost publicity to their nefarious scheme, since by this action their plans to undermine good business and disturb satisfied policyholders become easily frustrated.

I cannot pass the subject of twisting without voicing a word of condemnation against the misrepresenter who works injury through malice or ignorance, or possibly both, and who is really a twister in the making.

When the right kind of policy is honestly sold there is a common bond of interest between the agent and the insured. Self-interest or selfishness, which unfortunately is one of the governing characteristics of the human race, must not be allowed to conflict with this principle. The agent who wilfully deceives or misrepresents regarding either a competitor's proposition or his own policy contract, allowing a prospect to buy a form of insurance without a thought as to the fitness, but allows the amount of his commission to dominate the sale, such an agent enjoys a kind of success which is of short duration.

Gentlemen, let us recognize the obligation we owe the insuring public. Remember that our profession contains an element of practical benevolence far beyond that of any other calling. Let this great association be inspired as one man with the dignity, the benevolence and the far-reaching influence of the work we are doing. Could we who are writing applications to-day look into the future and see the good that will come to our clients from the money thus invested and realize the difficulties which are even now smoothing from the paths of a generation yet unborn, not one of us would ever lack for enthusiasm with which to pursue his labors.

Among the messages read to the convention was one from Superintendent Hotchkiss, of the New York State Department, who complimented the association upon its work in bettering conditions.

Vice-President Henry J. Powell, of Louisville, who was at the head of the movement in exposing so-called "abstractors," who were twisting life insurance policies, told the convention of his work. In the course of his remarks he said:

"Believing that if our association is

to amount to anything it is the duty of every man to do what he can to help his fellows, and further, in view of the fact that I had received numerous letters from association men, I was prompted early in July to secure as much ammunition as I could with which to fight the twister and to use on the 'audit' and 'abstract' sharks. The information secured by me was sent to the chairman of our Executive Committee for publication in the Life Association News and to other insurance journals."

George T. Wilson Talks.

George T. Wilson, Vice-President of the Equitable of New York, talked to the delegates upon the theme, "Mental Attitude." Mr. Wilson said:

I am glad to be here because I enjoy meeting men who are engaged in ameliorating some of the hardest conditions of life—engaged in a work the influence of which for good will be felt for generations to come by those whom you have never seen or heard of. How glowing would be the pages could the light that life insurance has brought to darkened homes be clearly recorded! In that record there would be food for those who would otherwise be hungry; clothing for those who would otherwise be naked; warmth for those who would otherwise be shivering; homes for those who would otherwise be homeless; education for those who would otherwise be ignorant. The world has little realization of what life insurance and life insurance agents have done and are doing to lighten the burdens that come to women and children along the pathway of life. You may well rejoice that your hearts and brains and hands are engaged in a work so beneficent. You have no need of apology for being engaged in this business.

No Substitute for Life Insurance.

Life insurance will be one of the great needs of the human race while human life continues productive and mankind continues interested in the product. There is no substitute. In its simplest form it means indemnity

1860 50th YEAR 1910

HOME LIFE

Insurance Company of New York.

GEORGE E. IDE, President.

Assets	\$23,626,018.63
Liabilities	21,858,691.52
(Including Deferred Dividend Fund)	
Dividend Endowment Fund	2,119,044.00
(Deferred Dividends)	1,767,327.00
Net Surplus	92,532,583.00
Insurance in Force	

The record for 1909 shows the following GAINS:

Insurance in Force	\$4,164,239.00
Assets	1,917,117.00
Deferred Dividend Reserve	148,581.00
Contingency Reserve (Surplus)	655,149.17

in the event of a loss so common that never "morning wore to evening" that such loss did not come to many.

Was it old Dr. Johnson or Charles Jerome Edwards or some other great philosopher who once remarked that men needed not so much to be taught new things as to be reminded of those they already knew? Now, of course, we all know in a general way of the tremendous achievements of American life insurance, but I take it that unless we are run up slam bang against the actual figures of those achievements occasionally we do not altogether and fully realize the grand extent of these achievements. May I, therefore, instead of indulging in any airy persiflage at the risk of being somewhat prosy, ask you to join me in a brief glance backward at the record of American life insurance. Yes? Well, looking backward we see that the work of American life insurance has been practically limited to a period about sixty-seven years. There were, it is true, some small beginnings before the commencement of this era—notably one near the middle of the eighteenth century, the organization of the Presbyterian Ministers' fund in 1759—but the work done before 1843 was chiefly of a special kind and very limited in amount, and the records of it are far from satisfactory. Omitting altogether the years before 1843 as unnecessary to the point, we find that the total death claims paid by the existing American life companies have amounted to \$2,674,351,887; the matured endowments and annuities to \$589,250,026; the payments to policyholders for purchased and surrendered policies to \$917,683,268, and the payments of dividends to policyholders to \$881,391,102, making a grand total paid to policyholders in sixty-six years of \$5,062,686,283. Besides this, the American life companies now hold reserves of \$3,028,542,773, sustaining \$15,480,721,211 of insurance in force and accumulated surplus awaiting the contract dates of its distribution as dividends to policyholders of \$532,264,368.

Glorious American Record.

This, then, is the record of American life insurance. How glorious it is! What an inconceivable mass of human anxiety and misery relieved does this vast expenditure represent! How, dwarfing all other forms of material beneficence, all records of princely philanthropists, all ancient myths of fairies and good genii, has this wonderful principle amassed fortunes almost inconceivable and distributed them among the unfortunate, the deserving and the needy.

And it devolves upon us of the present day to continue this great and grand work. How are you, the field workers, the builders of companies, to do it? For one thing, keep hammering away on every entering wedge that is likely to give a wider opening to opportunity. Take occasion by the hand and make such an impress on time as to make an impress on eternity. The twentieth century has the benefit of the great achievements of the nineteenth in life insurance, and the impetus gained will be helpful through all its years. The nineteenth century claimed to have been more fertile in discovery and inven-

A GREAT SIX MONTHS

We closed the first half of 1910 with a rousing increase in new business over our record for the first half of highly prosperous 1909.

In policies and dividends we have what the public wants. In literature and canvassing aids we have what the agent wants. And back of all is a reputation gained from 59 years of activity as a Massachusetts Company.

If you are a genuine producer, a *delivering* producer, and wish to join our forces, address

tion, more far-reaching in enterprise and to have exerted a wider influence upon the affairs of man than any preceding century, but it frankly said to the twentieth that it had neither discovered nor invented any way of giving the protection of life insurance to those who need it other than by industrious, earnest, persuasive, personal solicitation.

But perchance some one objects: The field is already crowded; the raw material is already nearly used up. Hardly any man capable of taking insurance but has been so often solicited that he is surfeited with the subject. Only the remnants remain for the twentieth century. Do not be deceived by such specious and fallacious reasoning. These arguments have to those who have been long in the work a familiar sound. The field expands as fast as or faster than the ability to occupy it. Look at the figures of the new census! Opportunity outruns achievement! There is absolutely no symptom of culmination. On the contrary, there are indications of even greater expansion. Discouragement is banished from view. Encouragement fills the horizon. Let us then continue the work in the spirit of true men and with the correct "mental attitude."

"Mental Attitude."

"Mental Attitude!" Like the good old country dominie, who, after announcing his text and wandering miles from it, finally concludes by remarking, "But to return to our text," I must return to the text which Brother Edwards asked me to talk at, and which I seem to have been fighting shy of all this time. And he assured me that if I talked just the way I do to my own Equitable comrades it would be all right and he would stay if the rest did. So here goes.

The longer I live the more and more am I impressed by the great importance in our work of one's mental attitude. Are there not days in the experience of some of us at least when we get up in the morning at conflict with ourselves and everybody else and look out upon the world in all its varying phases with a jaundiced eye? And we start out on the work of the day in that mental attitude. And with what result? Energy dissipated, vitality impaired, valuable time wasted and a generally unsatisfactory, fruitless ending of the day, and all because we started out in the wrong mental attitude.

The mental attitude of the field worker is one of the chief factors in securing results. A man of only ordinary natural gifts and representing a small company will, if he thoroughly believes in himself, in his company and its policies, secure better results than abler men in whose minds doubts exist as to their own abilities and the merits of the companies they represent, although such companies may be in the first rank. In both cases the impelling force is nothing but an attitude of the mind.

Qualities Making Success.

What is initiative—the ability to think and create—but a mental attitude? Yet initiative is one of the most important contributing factors in achieving success.

What is energy but a mental atti-

tude? There are many instances of men of frail physique and indifferent health accomplishing far better results than many with strong bodies and robust constitutions, simply because of the mental attitude which influences and controls their respective actions.

What are determination, perseverance and enthusiasm but mental attitude?

It is the mental attitude which makes a man early or late to his office; his mental attitude which keeps him in his office or drives him out to seek for new lives; his mental attitude which permits him to drift along without any useful creative thought, or constantly encourages him to think out fresh ways and means of securing new applications or of getting into touch with new prospects; his mental attitude which enables him to get over or around obstacles, difficulties, trials, troubles and tribulations instead of weakly succumbing to them.

The experienced underwriter always carries with him as a part of his mental outfit an accurate estimate of that proportion of his total cases which will be declined during the year and of that proportion of his cases for which he will be unable to obtain settlements and consequently when a case is declined or the applicant refuses or is unable to pay the premium his mind is fully prepared for just such a contingency—in fact, expects it—and therefore it is unable to adversely affect his mind, leaving him undisturbed to devote himself to other cases. What is this ability to anticipate and then ignore adverse conditions but a mental attitude?

Psychological Effect.

Then there is the all-important question of the influence of the state of the agent's mind upon the mind and actions of the prospect at the time of the interview. It is hardly an exaggeration to say, admitting sufficient means and good health, that the action of a man who is being canvassed will depend more upon the mental state of the agent's mind, more especially upon the measure of quiet determination and strong conviction it contains than upon any other circumstance.

The process of writing life insurance starts off with a mental determination to obtain results no matter how much work is entailed.

This mental condition drives a man to think out and initiate new plans for securing business.

Drives him to adopt a systematic plan of work in order to save valuable time.

Drives him to undertake all the necessary work which is entailed in finding and interviewing new prospects every day, and drives him to do all the necessary work which investigation of his prospect and thorough preparation of his case demand in order that he may exert the proper influence over his mind at the critical moment.

It is safe to say that there is no occupation in existence in which success depends in greater measure upon the mental attitude than in that of life underwriting.

Commissioner Barry Talks.

At one of the later sessions of the convention James V. Barry, Commis-

sioner of the Michigan Insurance Department, discussed current problems, in the course of which he said:

We all, I have no doubt, now agree that there has been a marked improvement in all phases of the business, a healthier sense of responsibility and a keener realization of duty on the part of all who have to do with its management, or with its presentation to the insuring public.

We thus find the great institution of life insurance in every way more substantial and more thoroughly entrenched in the good opinion of the general public than ever before.

Not the least gratifying feature of the situation is that it is worthy of

ARTHUR E. CHILDS, President.

the great measure of public confidence which it enjoys and which noticeably increases from day to day.

It may not be amiss for me to remark that I now have reference to companies actually engaged in the business and not to those altogether too numerous flotations which enterprising and accomplished professional promoters are so earnestly endeavoring to foist upon a confiding public, not only as agencies for acquiring independent fortunes in rapid fire time, but also as a means of grace because of the philanthropic purpose which underlies the whole proposition. But of this I shall have more to say before I have finished.

I have never deemed it necessary or desirable to supervise generally with either a club or a Gatling gun, although at times the perversity of human nature requires that these instruments of warfare be brought into play. I believe the supervising officials of the country in their entirety are in accord with this idea and regard the companies under their supervisions and their representatives as a whole as being fully as much entitled to public confidence and esteem as a like number of companies, associations and individuals engaged in any other legitimate business. That these supervising officials occasionally discover abuses which only the most heroic treatment can effectually eliminate is happily the exception which proves the rule.

One of the results of the developments of recent years is the new company and its promotion. The situation presents problems which call for careful, prompt and intelligent consideration if their solution is to be effective and timely.

Matter of New Companies.

I have no quarrel with new companies. On the contrary, I believe that if properly organized and managed, they accomplish much good. It would, in my judgment, be best for all concerned if there were to be established in every State one or more good, solid, substantial companies operated along safe and sane lines by men skilled in the business.

These local companies would do much in the way of educating the people as to the soundness and beneficence of life insurance as an institution and creating a healthy and intelligent public sentiment which would serve to protect the business from ill-considered and burdensome exactions which are too often the result of a feeling on the part of technically uninformed and unthinking legislators that they are dealing with some far away, hostile interest which constantly draws money from the State without giving anything in return. When you have in each State companies whose operations can be observed and studied at close range, whose business affairs are directed by reputable citizens of these States, and whose investments are largely within their respective States, the attitude of the public as reflected by the law-making power will be materially changed. As a rule, it is those States in which there are no such local interests that run riot in the way of harassing and burdensome

legislation.

The Professional Promoter.

The professional promoter invades a State fresh from unloading upon the good people of some other community, a company whose surplus contributions have largely been retained by him as compensation for his services, leaving them in possession of a plant which none of them knows how to operate, and proceeds to unload upon the good people who never laid eyes on him before another issue of stock which he sells at a very substantial premium. In too many instances this premium represents the compensation of the promoter and is eliminated from the project before the organization of the company is completed.

The professional promoter never stays by the company. His mission is simply to sell the stock at a fancy price in order that he may reap his handsome reward. He may tarry for a while after the organization is effected, but he invariably makes an early exit as soon as the stockholders come to realize just what he has done to them.

No Royal Road to Wealth.

The investing public should understand that there is no magic these days by which a life insurance company can coin money for its stockholders. When solicited to purchase stock the investor should investigate the proposition as carefully as he would a proposal to invest in the stock of any other business enterprise. He should demand authentic information as to the amount of his contribution that is to be used for promotion; he should thoroughly inform himself as to the capacity, skill and integrity of the men who are to manage the various important and widely differing departments of the company's business after its organization is completed; and he should understand that he must be content with only a reasonable return on his investment, and not that until the company has been fully established, with a good volume of paying business on its hands.

It is with confidence that I assert that time will not disprove the declaration here made that the investor who yields to the blandishments and misleading statistics and literature of the professional promoter whom he never saw before will not live long

enough to realize the abnormal profit he has been led to expect.

Powell New President.

On Saturday Henry J. Powell, of the Equitable Life at Louisville, was unanimously elected President for the ensuing year, and the other officers are: First Vice-President, John D. Spencer, New York Life, Salt Lake City; Second Vice-President, J. J. Jackson, Aetna Life, Cleveland; Third Vice-President, William McBride, North American of Canada, Winni-

BRUCE COMMITTEE ON THE TRAIL.

(Continued from Page 3.)

EX-STATE SENATOR GOODSSELL ON THE STAND
He Formerly Represented Odell's District

When the committee went into its second day's public session last Thursday in the Aldermanic Chamber the big room was nearly filled with local political celebrities. Only two witnesses were examined during the day—George Carpenter, the former Ellingwood & Cunningham bookkeeper, and ex-Assemblyman Louis Bedell.

Mr. Bedell objected vehemently to the assumption by Judge Bruce that the many credits on Bedell's ledger account with Ellingwood & Cunningham had their source from deposits made with the brokers by Messrs. Vreeland, Rogers and Robinson, all of whom were actively associated with large street railway interests.

Judge Bruce replied with the statement that the assumption was based upon entries in the brokers' books, and then Mr. Bedell denied hotly that the books furnished any basis for the assumption.

Thereupon Mr. Bruce, assisted by Mr. Kresel, patiently went over the ponderous ledgers and the ragged check stubs and made the witness acknowledge that 10 out of the 11 credit entries in Mr. Bedell's account, amounting in all to \$19,281, could be traced clearly through the various entries in cash books, blotters and check books to Vreeland, Rogers and Robinson, excepting one credit of \$600, which came apparently from a former Erie County Assemblyman named Schneider.

The Money Used in Politics.

In his statement, which Mr. Bedell made upon invitation of the committee, the witness admitted that some of his withdrawals of cash from Ellingwood & Cunningham were used by him to make political contributions to the Republican State Committee, the Orange County Republican Committee and to pay his own campaign expenses.

Aside from the deposit of money to the credit of the witness by Mr. Rogers, to be used for campaign purposes, the witness said other credits in his account originating with Mr. Rogers were made because Mr. Rogers felt a moral obligation to recoup the witness for losses he had sustained in joint speculative accounts with G. Tracy Rogers.
